PREFACE

THE treatise here edited has come down to us under the name of Saloustios (here called Sallustius in accordance with the conventional Latinism) with no external evidence for its date or purpose. The suggestion that it was written by a friend of the Emperor Julian and in the service of his attempt to revive ancient paganism lent it a new interest, and in 1912 Professor Gilbert Murray gave it an English dress and drew public attention to it in his *Four Stages of Greek Religion* (now reissued in a revised form as *Five Stages of Greek Religion*). In his preface he expressed the view that 'an edition of Sallustius is urgently needed.' Some years later Professor Praechter said in the great German encyclopaedia of classical antiquity, 'A critical edition of the tractate is a pressing need,' and again, 'In addition to a convenient edition it needs a close linguistic and philosophic analysis; only by this can we learn where the writer stands, to what form of Neoplatonism he is attached, and in particular what are his relations with Iamblichus and Julian.' The present work seeks to meet this need. Muccio's discovery of the manuscript at Milan gives a trustworthy basis for the text: the Prolegomena are devoted to its exposition and to an attempt to place it in the right historical perspective. It is in truth not the least instructive or attractive document of the conflict of beliefs in the fourth century of our era, and the study of that conflict is surely of more than antiquarian interest.

My most sincere thanks are due to all those who have helped me, and in particular to the Managers of the Craven Fund, who by two grants enabled me to travel and to visit the libraries containing the manuscripts of Sallustius; to the Syndics of the Cambridge University Press for accepting financial responsibility for this book; to the Librarians of the Ambrosian Library at Milan and of the Vatican Library for facilitating my studies; to Professor Franz Cumont for putting his collation of the Vatican manuscript at my disposal and

for other help and advice; to Professor A. C. Pearson for his great kindness in reading the bulk of my work in manuscript and for many useful suggestions; to Mr E. Harrison for his vigilant reading of the proofs and for much assistance to me earlier in the preparation of the book; to Professor A. E. Housman for help in astrological matters; to Dr E. H. Minns for palaeographical aid; to Mr C. T. Seltman and the Rev. W. Telfer for valuable criticism and advice; and to Mr N. H. Baynes, Mr H. I. Bell, Mr A. B. Cook, Mr F. M. Cornford, Mr H. T. Deas, Mr H. Mattingly, Mr D. S. Robertson, and Mr F. H. Sandbach for assistance of one sort or another. In so far as this edition fails to answer the requirements of criticism it is not for want of friendly help. I should finally wish to express my indebtedness to Professor Murray, to whose book I owe my interest in the subject and whose translation has been of material service to me in the revision of my own.

CHAPTER I

THE INTELLECTUAL BACKGROUND

§ I

IN the fourth century two rival systems of education present themselves in sharp opposition. There is on the one side philosophic training, which aims at imparting definite and scientific knowledge and thereby forming the mind; this conception is Plato's. Opposed to it is rhetorical training; this strives to give general rather than specialised knowledge and to produce men of good intelligence and wide range. Its great exponent is Isocrates. This opposition weakened during the Hellenistic age. Philosophers busied themselves more with rhetorical theory; thus Philo of Larisa expounded a broad conception of the art which may well have inspired, directly or indirectly, Cicero's picture of the perfect orator¹. On the other hand, Hermagoras in the second century B.C. claimed for rhetoric the right to treat general questions, ζητήματα πολιτικά or θέσεις as they were called².

Such θέσεις became a regular feature of rhetorical training. Theon of Alexandria, who remarks that the great rhetoricians of the past thought philosophy a necessary preliminary to the study of oratory, suggests as a subject for discussion the

¹ Cf. H. von Arnim, *Leben und Werke des Dio Prusa*, 87 ff., Christ-Schmid, II. 342 f. Von Arnim's contention that Cicero followed Philo closely in *De oratore* III. 54-143 has been greatly weakened by W. Kroll's paper, *Rh. Mus.* LVIII. 552 ff.; Kroll suggests Antiochus of Ascalon as the original employed.

view of Euripides that the mind of each individual is ■ god³. Theon's teaching enjoyed great authority in later times. On this subject it repeats what Quintilian had maintained. The latter, while disliking contemporary philosophers, pleaded for the necessity of philosophical studies and professed a warm regard for Plato and Aristotle⁴. His main interests in this direction were ethical; he wished his orator to be a wise Roman⁵.

This theory corresponded with practice. Aristides received philosophical training at Athens, and professed ■ high admiration for Plato⁶. His attacks on false philosophers find parallels in Dio of Prusa and Epictetus⁷. The rhetorician Menander says that the special glory of Athens lies in language and philosophy⁸, and Hermogenes mentions as occupations for which a man can be praised, philosophy, rhetoric, and the profession of arms⁹. The work of Callinicus *Against the schools of philosophers*¹⁰ may have been aimed at particular schools or at philosophical dogmatism; in any case, it stands by itself. Later we find Themistius and Himerius keenly interested in abstract thought. Himerius knew Plato well at first hand¹¹. So did Libanius, though to him Plato counted as a writer rather than as a thinker; at the same time, he praised philosophers in general and Iamblichus in particular¹². Meanwhile, if we except Sextus Empiricus,

THE INTELLECTUAL BACKGROUND

there is not much antipathy shown by philosophers to rhetoric.

There was, then, little or ■■ antagonism between rhetoric and philosophy under the Empire. Further, rhetorical training tended to include some philosophy. At the same time, in the first two centuries of our era real philosophers continued to give to many some philosophical teaching. The evidence on this point is not easy to use; we can, however, draw inferences from Galen's complaint that most of those who in his day pursued the study of medicine or philosophy lacked the necessary propaedeutic and could not even read well¹³. This remark excludes the hypothesis that only ■ chosen few then received such teaching. It may often have been very casual: pupils seem to have heard single lectures without staying through the course¹⁴. Some, however, like Galen's father, took the subject seriously¹⁵. Its study was not confined to those who could visit the great universities, if we may so call them, of Athens and Alexandria. There were many private teachers of philosophy, and it would appear from the number of impostors who embraced this profession that it was remunerative¹⁶. Further, the evidence of inscriptions indicates that philosophers were men of consequence in their cities¹⁷.

¹³ Περὶ τῶν ἰδίων βιβλίων, II. p. 91 Müller=XIX. p. 9 Kühn (for this propaedeutic cf. Norden, *Kunstprosa*, II. 670). Paulus Aegineta, writing in the seventh century, assumes the study of some philosophy as normal (I. 14). It could of course be learnt as part of general knowledge. For the habit of going to philosophers cf. Philostr. *Vit. Apoll.* VI. 36, εἰ μὲν γὰρ παῖδά σε ἐώρων ἔτι, ξυνεβούλευον ἂν φοιτᾶν ἐπὶ φιλοσόφων τε καὶ σοφιστῶν θύρας καὶ σοφίᾳ πάσῃ τὴν οἰκίαν τὴν σεαυτοῦ φράττειν.

¹⁴ Plut. *Pomp.* 55 mentions that Pompey's wife listened *usefully* to discourses.

¹⁵ Περὶ ψυχῆς παθῶν 8, i. p. 31 Marquardt=v. p. 41 Kühn. We find a philosophic family (father, daughter and her husband) at Apollonia in Mysia, *J.H.S.* XVII. 269, n. 6.

¹⁶ Cf. Galen, Περὶ τῆς τάξεως τῶν ἰδίων βιβλίων I, ii. p. 81 Müller=XIX. p. 50 Kühn.

Rom.* IV. 527, at Hadriani, *B.C.H.* XXXIII. (1909) 409, n. 409, at Panamara, *Ditt. Syll.*³ 900, at Pergamum (?), *I. G. Rom.* IV. 468, at Rhodes, *B.C.H.* XXXVI. (1912) 230, at Tichiussa, Lebas-Waddington 239, in the Hellenistic period at Samos, *Suppl. epigr. gr.* I. 368, and, to turn to the West, at Brundisium, *Ditt. Syll.*³ 1227, and at Madaura, *Ann. épigr.* 1919, n. 36 (Apuleius). The memory of earlier philosophers was also honoured; we find Chrysippus on Imperial coins of Soli-Pompeïopolis in Cilicia (Imhoof-Blumer, *J.H.S.* XVIII. 167 f., pl. XII. 13, 17),

Such oral teaching hardly existed outside Greece, Asia Minor, Syria, and Alexandria. There is no evidence for it in the Greek colonies in South Russia. The philosopher Sphaerus, ■ Bosporan by birth, taught at Alexandria, and Bion did not remain in his native Olbia¹⁸. From the third century B.C. onwards the Greeks of this region, like their brothers in the Danube valley, were engaged in ■ continual struggle for existence¹⁹. Again, in Egypt outside Alexandria philosophical instruction was probably not to be obtained, although elementary schools were frequent and the normal rhetorical training was readily available. At the same time it should be remembered that the reading which formed part of the latter included Plato and probably other philosophical texts²⁰. Moreover, ideas were spread by books as well as by teaching; we may recall the letter in which Hierax of Oxyrhynchus is bidden by his father Cornelius to persevere in his reading²¹. Our extant papyri include much Plato, some Aristotle, the elementary Stoic treatise of Hierocles, an anonymous anti-Stoic brochure, anonymous Epicurean fragments, and the like²². These works were read, or at least handled, in the outposts of Greek culture.

Heraclitus on coins of Ephesus struck under Philip Senior (*B. M. C. Ionia*, 98, n. 340 f., pl. XIV. 12) and Anaxagoras on coins of Clazomenae (*ib.* 28, n. 102-4, pl. VII. 4, and 33, n. 125, pl. VII. 9). Lucian's phrase concerning impostors, *Pisc.* 31, ὁρῶν δὲ πολλοὺς οὐκ ἐρωτῇ φιλοσοφίας ἐχομένους ἀλλὰ δόξης μόνον τῆς ἀπὸ τοῦ πράγματος, confirms our view of the reputation enjoyed by philosophers. On their general position, and the benefits conferred on them by Marcus Aurelius cf. J. H. Walden, *The Universities of Ancient Greece*, 162 ff. In the fourth century they were for the most part private teachers, cf. A. Müller, *Philol.* LXIX. 297.

THE INTELLECTUAL BACKGROUND

In the East, indeed, advanced studies, as later theological controversies, radiate from a number of great centres, such as Antioch and Alexandria, and from various minor cities²⁵. In the West we have Rome, where Plotinus taught, and there is evidence for the existence of teachers of philosophy in Sicily, which had a legacy of Greek tradition²⁶; for the rest we find some seats of culture, such as Carthage, Burdigala, Lugdunum, and Corduba, but no distinguished home of abstract thought. The typical Roman point of view was that of Agricola's mother; her son might dabble in philosophy, but he must not take it seriously. In spite of distinguished exceptions, like the Sextii, the upper classes at Rome showed themselves averse from deep speculations. Their philosophical interests were primarily ethical, and these were the province of the domestic philosophers kept by men of wealth²⁷.

The training of most men of education fell into three stages. 'The first bowl,' says Apuleius, 'stimulates us with the elementary teaching of the primary master, the second equips us with the learning of the grammarian, the third arms us with the eloquence of the rhetorician. This is as much ■ most drink; I have drunk other bowls also at Athens²⁸.' It was indeed only the few who could go to Athens²⁹, and even at Athens philosophy did not enjoy an unchallenged supremacy. When Gellius arrived, it was assumed by the philosopher Taurus that he had come there to study rhetoric³⁰.

read as a writer rather than as a thinker; apart from fragments of his dialogues and one of the *Προπαινετικά* of Aristotle, few philosophic texts have been found there (F. G. Kenyon, *J. Eg. Arch.* VIII. 136).

■ Tarsus, Emesa etc., cf. Christ-Schmid, II. ii. 948 f. These and other centres of Greek culture in Asia Minor exercised ■ little influence in the direction of substituting in daily use Greek for the native dialects (cf. K. Holl, *Hermes*, XLIII. 248).

■ Aristocles of Messina taught Alexander of Aphrodisias, cf. Vitanza, *Athenaeum*, 1923, 249.

■ For these cf. Friedländer, *Sittengeschichte*¹⁰, III. 283 ff.; one would like to know more about the place which they filled ■ the household. This preoccupation with ethics is in a measure general.

■ *Florida*, 20. At this time the grammarian was concerned with language and with the reading of poetry only (in the East certainly), prose authors coming within the rhetorician's province; cf. Christ-Schmid, II. ii. 926 f.

²⁸ *Noctes atticae*, XVII. 20. 4; Aristides is said to have studied rhetoric at Athens

For the intellectual condition of the Western half of the Empire the evidence is adequate. The *Florida* of Apuleius shows us what suited the taste of prosperous and cultured Africa, where Greek was till the third century of our era almost as familiar ■ Latin²⁹, while the inscription FILOSOFI LOLOCVS on the charming mosaic representing a garden in the baths of Pompeiana shows how vague a conception of *philosophia* there prevailed³⁰. From Spain came the younger Seneca and the Stoic Decianus, but there is no evidence for philosophical studies in these provinces. For Gaul our information is most full in the fourth century and is due chiefly to the tedious verses which Ausonius wrote about his colleagues at Bordeaux. It would appear that the philosophers he praises were not distinguished by the depth of their studies³¹. In Britain and Belgium no trace of these studies appears; it has been truly observed that we do not know the name of an author of any sort born in the latter during the Roman occupation³². An inscription in the Rhineland records the death of a philosopher³³. As he is described ■ the friend of Salvius Julianus, probably the consul of 174 A.D., we may reasonably infer that he was a domestic philosopher.

This distinction between the East and the West appears clearly in the history of medicine under the Empire. Greek medicine was from its beginnings greatly influenced by Greek

(Schol. in *Panath.* p. 306. 6 Dindorf). At the same time it will be remarked that he ridicules the exaggerated esteem there paid to Plato (*Orat.* xxvii. p. 548 Dindorf = 51, § 60 Keil).

²⁹ Cf. W. Thieling, *Der Hellenismus in Kleinasien*, 20, 29; even later we read of Fulgentius that he knew Homer and Menander by heart, and spoke Greek perfectly (*Vita*, LXV. 119 Migne).—On Apuleius ■ typical of the age cf. P. Vallette, *L'Apologie d'Apulée* (1908), 185 ff.

The mosaic portraits of Socrates, Chilo, Cleobulus at Köln and Trier (Reinach, *Répeint. gr. rom.* p. 262 f.) prove nothing, and the 'philosopher' mosaic at Trier may represent the Muse and poets (F. Drexel, *Germania Romana*, p. x, on pl. XXI. 6).

THE INTELLECTUAL BACKGROUND

philosophy, and even under the Empire doctors prided themselves on their philosophical attainments³⁴. At Rome itself most practitioners were Greek³⁵; the evidence for the Western provinces ■ ■ whole is inconclusive, but Greek doctors were certainly employed in the army³⁶. We see therefore that in an occupation commonly associated with some philosophical knowledge the East far outshines the West.

• Nevertheless, the excellence of the former is only relative. Philosophy was dying, and that largely because of the weak humanism of rhetorical training and the increasing dislike of intellectual effort. The shallow eclecticism of Plutarch was succeeded by the shallower eclecticism of Apuleius and by the intellectual bankruptcy of Philostratus. The decline was marked in the third century. Porphyry, in his *Life of Plotinus*, quotes a striking saying of the rhetorician Longinus, 'There were many philosophers when I was a boy, but now it is impossible to say how utterly this subject is neglected³⁷.' Neoplatonism brought a fresh stimulus to thought, but brought it too late; if its first expression was the serious metaphysics of Plotinus, in fifty years it became theosophy³⁸. Material causes hastened the decay of philosophic studies. The economic fabric of the Empire was shaken by barbarian inroads, by plague, and by inefficient administration; the prosperity of the cities suffered grievously³⁹. The *Eis βασιλέα*,

■ Galen is the most striking example; among his treatises is one entitled "Ὅτι ὁ ἀριστος ἰατρός καὶ φιλόσοφος. Cf. *I. G. Rom.* III. 733 (Heracitus of Rhodiapolis ποιητῆς ἔργων φιλοσοφίας), *I. G.* XIV. 942 (doctor at Ostia πάνσοφος), and *C. I. G.* 3311, 6607, *I. G. Rom.* III. 534, [Soran.] *Isag.* in Rose, *Anecdota*, II. p. 244. 16, *C. Galen uses such phrases as (τῶν) ἰατρῶν τε καὶ φιλοσόφων. Unlearned practitioners did of course exist as early as Aristotle (*De sensu*, p. 436 a 20).

wrongly ascribed to Aristides and assigned with good cause to the third century, speaks of the evil plight of education⁴⁰. Formal rhetoric and Roman law were useful studies; philosophy was not, and suffered accordingly. Even in the second century, when Antoninus Pius gave immunity from taxation to a number of professional men in each city, he remarked, 'No number of philosophers was fixed, because of their rarity⁴¹.' Philosophers are not mentioned among the learned beneficiaries of Alexander Severus⁴², or of Diocletian, when the latter restored the immunities just mentioned, or among instructors in the latter's Edict concerning prices⁴³. At Constantinople in 425 A.D. the university had one professor of philosophy, eight of rhetoric, and twenty-two of other subjects⁴⁴. The fourth century was one of much intellectual activity, but in its course rhetoric itself was gradually superseded by the more profitable study of law⁴⁵.

It must be remembered that this was in a measure the supersession of an exhausted culture, the representatives of which were and felt themselves to be the followers of greater men, whose like would not come again. An orator of the fourth century is glorified as 'a master of eloquence so incomparable in his own generation that he could be likened only to the ancients⁴⁶.' Even Galen held that, in view of the badness of education and of men's preference of gold to virtue, there was no hope of any doctor rivalling Hippocrates⁴⁷. The

No wonder, then, if these studies dwindled till S. Jerome could exclaim, 'What ■ handful now reads Aristotle! How many know the books or the name of Plato? Hardly do old men at leisure study them in seclusion⁵⁰.' The closing of the Academy at Athens in 529 A.D. is not so remarkable as its continued existence till that date⁵¹.

§ 2

If we ask ourselves what was the rhetorical and philosophic basis for the thought of the average well-educated citizen of the Empire the answer must be that it was in the nature of things eclectic. Galen records that his father warned him not to hurry to declare himself a member of any school, but rather to learn and test their teaching at leisure and to pursue the four great virtues, since all praise them⁵¹.

For very many the teacher of rhetoric was the sole source

the failure to make scientific observations in *desidia rerum omnium*, and some good remarks thereon by W. Kroll, *Studien zum Verständniss der römischen Literatur*, 280 ff. On the other hand, Hermes, *ap. Stob.* i. 21. 9, p. 193 W., prophesies that posterity will name stars yet unnamed.

⁴⁹ *Ad Ep. ad Gal.* III. (XXVI. 401 ■ Migne), quoted by Dill, *op. cit.* 4104.

■ Even this was not the end of philosophic studies at Athens; they lingered on till the seventh century (F. Schemmel, *Neue Jahrb.* XXII. 513). We know something of such pursuits at Alexandria in the second half of the fifth century (cf. H. I. Bell, *J. Eg. Arch.* VIII. 153 f.), and at Byzantium in the seventh century (cf. Usener, *Kleine Schriften*, III. 251 ff.); the tradition survives later in Theodoros Prodromos (cf. K. Praechter, *Byz. Zeit.* XIX. 314 ff.). A smattering of knowledge of the great thinkers perhaps survived in rhetorical training; Georgios Monos, who is dated in the fifth century, quotes Aristotle (wrongly, it appears) and Plato (L. Schilling, *Fleck. Jahrb. Suppl.* XXVIII. 690). On later Byzantine education cf. H. von Schubert, *Gothein-Festgabe*, 96 ff., and F. Schemmel, *Phil. Woch.* 1923, 1178 ff.: 1925, 236 ff. A comprehensive monograph on the subject would be of much value.

of higher education. This condition of affairs is reflected by ■ papyrus lamenting the death of a Platonising rhetorician of the fourth century:

τὸν δὲ μετὰ χρεῖῳ ζαθεὴ πόλις αὐθι κατασχεῖν
ἤθελε παρπεπιθοῦσα, νέων ἵνα πῶν νομεύσῃ
ἀνθρώπων εὐηγενέων ἀγανόφρονας υἱας...

(‘And him, in its need, the divine city would fain win and keep, that he might be shepherd to the flock of the young, the gentle-minded sons of noble men.... Rome, that never wept before, wept then.’) Monumental praise rises to such heights as ἀνὴρ προφερέστατος ἀνδρῶν, ῥητορικός, μέγα θαῦμα⁵³ and ἐνθάδε κ[εῖται] Τ(ίτος) Φάνεος Μόδεστος σοφιστῆς εἰς μετὰ τῶν ἐπτὰ σοφῶν, μὴ γεμίσας εἴκοσι πέντε ἔτη⁵⁴. How easily rhetoricians and philosophers could be classed together is shown by a phrase of Aristides, τῷ τε ῥήτορι καὶ φιλοσόφῳ⁵⁵, and by S. Jerome’s juxtaposition of *campum rhetorici eloquii, tendiculae dialect(ic)orum, Aristotelis spineta*⁵⁶.

Typical of the second century are such rhetorical philosophers or philosophic rhetoricians as Apuleius and Maximus Tyrius⁵⁷; philosophical or semi-philosophical matter was cast in a rhetorical form, as in the fragment Περὶ Ἱππομάχου⁵⁸.

THE INTELLECTUAL BACKGROUND

How superficial such writing could be is exemplified by the letters attributed to famous philosophers; many of these were written in the first century of our era⁵⁹. Philosophy, then, could be degraded, as history had been when compelled to give material for fine writing and elegant digressions⁶⁰; science also suffered, as men's interest in truth waned before the desire to expatiate on the exciting rather than the real. The signs of the eclipse of the critical faculty under the Empire are manifest⁶¹. Even rhetoric was the poorer for the intellectual state of the times; the technical and narrow system of Hermogenes held the field, and the wider views maintained by Aristotle in his *Rhetoric* were generally disregarded⁶².

§ 3

To the slender modicum of philosophic ideas acquired at school something might be added by the diatribe, ■ species of popular sermon or causerie. The originator of this literary form was Bion the Borysthenite; ■ a rule it was tinged with Cynicism and written in a pointed style, with considerable use of popular phraseology. We know it best from the remains of Teles⁶³. Its influence in a greater or less degree

protreptici fragmenta (Diss. Strassburg, 1903), K. Münscher, *Burs.* CXLIX. (1911) 43 f. Wilamowitz-Moellendorff, *Hermes*, LVIII. 80 ff., dates it in the third century, thinking that the statement *ὅτι μὴ χρὴ μεμελεσθαι περὶ τοὺς θεοὺς μηδὲ διαίρετόν εἶναι θεὸν ἀπὸ θεοῦ* alludes to Christianity. This seems very unlikely.

⁵⁹ Cf. J. Marks, *Symbola critica ad epistolographos graecos* (Diss. Bonn, 1883), 9 ff.: the letters ascribed to Hippocrates ■ be dated at the beginning of our era thanks to papyrus finds, which also prove the interesting fact that more than one edition of the collection was published; it must therefore have been popular (Pohlenz, *Hermes*, LII. 348 ff., Diels, *ib.* LIII. 79). For the rhetorical teaching of epistolography cf. G. Przychocki, *Diss. acad. Cracov.* III. v. (1913) 251 ff.

■ Cf. Quintilian, *Inst. orat.* XII. 4. Yet considerable interest was felt in history, cf. Christ-Schmid, II. 745: the work of Pausanias indicates clearly that history interested his contemporaries ■ than the study of art, as A. Trendelenburg remarks, *Pausanias' Hellenika* (Progr. Berlin, 1911, n. 65), 29.

⁶¹ Cf. W. Kroll, *Mitteil. schles. Ges. Volkskunde*, XXIV. (1923) 9 ff.; he remarks on the light which the *Pseudodemocritea* throw on the mentality of the time in which they were written. For the decline of geographical study after Ptolemy cf. F. Gisinger, *P. W. Suppl.* IV. 670.

⁶² So Christ-Schmid, II. 927, I. 760 (where it is remarked that some of the ideas of the treatise became common property).

⁶³ I quote by page and line from O. Hense's second edition (1909).

has been traced in numerous writers of the Hellenistic age and of the Empire, such as Phoenix of Colophon, Seneca, Musonius, Dio of Prusa (and his imitator Themistius), [Plutarch] *De liberis educandis*, S. Gregory Nazianzen, and again in Horace and in certain epigram-writers of the Anthology. Naturally, this influence can be exaggerated⁶⁴; what is certain is that a marked style and a definite kind of imagery were used by men of various schools of thought in giving popular expression to their views. When Lucretius asks what answer man could give if Nature took voice and answered his complaints, when he puts the question (III. 938), *cur non ut plenus uitae conuiuia recedis?*, he is using the style in question. Teles quotes from Bion a similar 'Should the world itself take voice...' (p. 68)⁶⁵, and himself says 'I leave life ■ if it were a banquet' (p. 16, 2). Again, Seneca has much in common with the diatribe. Not to stress coincidences of detail⁶⁶, we may note the comparison of life with a house from which the landlord removes doors and windows in default of payment (that is a parallel to our loss of limbs or senses)⁶⁷, the argument that it is absurd to regret the brevity of an existence which can fill only a moment in time⁶⁸, the recurrent illustrations from medicine⁶⁹, and the constant use of anecdotes⁷⁰. So too Philo's writings show clear signs of the

⁶⁴ Cf. R. Hirzel, *Der Dialog*, II. 13, Pohlenz, *Χάριτες für Leo*, 76, W. Kroll, *Studien*, 85 f. Frequently what looks like a direct use of philosophical writings may be explained as the repetition of one of the old traditional reflections common in poetry. Pohlenz has made some good remarks on this subject, *Phil. Woch.* 1897, 1064 ff. A new fragment of moralising poetry is *P. Oxy.* 1795 (acrostic epigrams, some hedonistic, some improving).

⁶⁵ Prosopopoea is characteristic of the diatribe; cf. R. Weber, *Leipziger Studien*, x. 161 ff., esp. 166, H. Weber, *De Senecae philosophi dicendi genere Bioneo* (Diss. Marburg, 1895), 22.

influence of the diatribe⁷¹, and there seem to be traces thereof in the Epistle of S. James and in the first Epistle to the Corinthians, as also markedly in Tertullian, *De pallio*, and again in the *Corpus Hermeticum*⁷². Further, in Boethius *De Consolatione* we find again the argument that we could make no answer to Fortune if she replied to our charges, the familiar address to the human race in its perplexities⁷³, the old contempt for worldly riches and insistence that man's need is healing. Much that Usener regarded as directly taken from Cicero's lost *Hortensius* is more plausibly explained by Fr. Klingner as in the tradition of the diatribe⁷⁴.

The influence of this kind of teaching was therefore wide. The anecdotes which it employed had a wide circulation outside it, as for instance as *χρεῖαι* in schools⁷⁵. Two sayings of Diogenes, obviously written out as a school task, occur on an ostrakon recently published⁷⁶, while one given by Teles is found also in a *gnomologium*⁷⁷.

Nor was the influence exercised merely through books. Throughout antiquity the spoken word counted for more than the written word. In its nature the diatribe was a written record of oral teaching, and its personal exponents continued to be of importance⁷⁸.

An example is Demonax of whom Lucian has given ■ so appreciative ■ sketch. In Lucian's pages he is the diatribe personified. He laid all philosophical schools under contribution, admiring Socrates and above all Diogenes (ch. 5). The fortunate he reminded of the brief duration of human prosperity; sufferers from poverty, exile, ill-health or bereavement he consoled (ch. 8, 25). Like Diogenes and unlike Socrates he refused to do sacrifice, holding that the gods need nothing from us (ch. 11). The emphasis he laid on freedom of soul (ch. 20) is Cynic in origin and a commonplace of Hellenistic and later thought⁷⁹.

The diatribe, like Demonax, has a markedly eclectic tendency. Further, the extensive consolation literature of antiquity draws upon it for material⁸⁰. A minor point of contact is that Demonax knew most of the poets by heart (ch. 4). Poetic quotations are a constant feature of diatribes and consolations⁸¹.

Lucian holds up Demonax as a model to all philosophers. For all his admiration of Epicurus he was at heart

nullius addictus iurare in verba magistri.

Elsewhere he makes Teiresias say to Menippus: 'The life of ordinary men is the best and is more sensible: abandon the folly of high speculations and questions of ends and causes, despise these wise syllogisms: think all that sort of thing nonsense and make it your only aim that you may use the present well and run your course smiling for the most part and in earnest about nothing⁸².' To this ideal picture drawn

⁸⁰ Cf. Geffcken, 15. At the same time, its fountain-head is Crantor's book *Περὶ πένθους* and its matter in large part still older. Diatribe influence is clearest in its style. For the use of ideas appropriate to these consolations cf. Dio Cass. XXXVIII. 19 ff. (Philistus consoles Cicero ■ his exile.)

Weber, 26 f., 49 f., also [Hippocr.] *Præcepta*, 12 (l. 326 Jones = IX. 268 Littré: on quotations in popular lectures on medicine), also Philo, *De aeternitate mundi* passim (on the character of which work cf. p. lxi ff. *infra*), Menander, Rhetor, *Περὶ ἐπιδεικτικῶν* 9, IX. 282 Walz (on the familiarity of Eur. *Cresphont.* fr. 449 N.²).

by Lucian there are distinct resemblances in a brief portrait Apuleius gives of Crates⁸³.

An interesting example of this type as transplanted in Christian surroundings is to be found in S. Gregory of Nyssa's life of S. Gregory Thaumaturgus. The author's rhetorical standpoint has perhaps caused him to sketch a type rather than an individual⁸⁴. His hero utters what is substantially a diatribe on the needlessness of housing: 'Why do you feel confined, with heaven covering you? Why seek you any other inn? Let one house be a care to you, your own, which you build and raise on high with your virtues. Be grieved only with the fear that this house may be ill equipped⁸⁵.'

Further, Gregory represents the Thaumaturge as acting the diatribe. 'The mourner was consoled, the young man was moderated, the old was physicked with the proper words: slaves were taught to feel affectionately to their masters, those in power to be kind to their subjects, the poor to think virtue

P. von der Mühl, *Festgabe Blümner* (1914), 425 ff., Epictet. *Diss.* III. 22, 47, Musonius, p. 71 Hense). Men's complaints that they lack house room are answered by Teles, *Περὶ αὐταρκείας*, p. 8, Musonius, *Περὶ σκέπης*, p. 105 ff. For στενοχωρία, στενοχωρεῖν we have such instances as Teles, p. 60, 11, Hippodamus, *ap. Stob.* IV. 34. 71 (vol. v. p. 848. 5 Hense), Epictet. I. 6. 26, 25. 28, IV. 1. 106: for the notion we may refer to Seneca, *Ep.* 25. 4, 74. 28, 119. 10, 120. 15, *Dial.* III. 21. 4, IX. 4. 7, Hor. *Carm.* II. 10. 21. The soul may be called an οἶκος, cf. p. xix, n. 13 *supra*, καταγωγίον is equivalent to *deversorium* (S. Ambrose, *De Abraham*, II. 8. 48, *exire ex his deversoriis*, Prudent. *Hamart.* 854, *animam post deversoria carnis renarrantem*: καταγωγίον is used of the underworld by Antiphanes, *Ἀφροδίσιος* fr. ii. III. 29 Meineke). The contrast of a well-furnished house and ill-furnished soul is familiar from Persius, IV. 52, *Tecum habita; noris quam sit tibi curta supellex*. In general, for the contrast of material wealth and spiritual poverty cf. G. A. Gerhard, *Phoenix von Kolophon*, 128 ff.

For εἰς ὕψος ἀνατεινόμενος cf. *Gnomol. Epicteteum*, 60, p. 491 Schenkl², εὖ ποιῆεις σὺ τὰ μέγιστα τὴν πόλιν εἰ μὴ τοὺς ὁρόφους ὑψώσεις ἀλλὰ τὰς ψυχὰς αὐξήσεις.

the only wealth, virtue that is set before all to gain to the best of their ability: he that was proud of his riches was likewise admonished and taught to regard himself as the steward and not the master of what he had⁸⁶. This is very like Lucian, *Demonax*, ch. 8. Such giving of consolation and advice was regarded as the task of a Cynic philosopher⁸⁷. It rested on the belief that any part which Fortune may give one in the drama of life can be played well⁸⁸. Poverty may even be of assistance in the pursuit of virtue⁸⁹; for our happiness or unhappiness we are alone responsible⁹⁰, since only virtue can give the former⁹¹.

How clearly this section of S. Gregory is related to the diatribe is shown by a comparison with any ordinary description in scriptural language of a model Christian character⁹².

§ 4

To this popular philosophy, communicated by oral or by written teaching, we may trace some of the reflections on life and death which recur continually in Greek and Latin metrical epitaphs. It has been shown that the source of not a few of them is that consolation-literature of which the ancients were so fond⁹³; that is not to say that the majority of those responsible for funerary inscriptions knew this literature at first hand. Very often the monumental mason employed may have suggested a few suitable words or the bereaved had seen an epitaph which they wished to copy. An idiomatic ταῦτα, 'that's that,' recurs continually, sometimes with amplifications,

Parallel to this is perhaps ■ Syrian inscription, οὐκέτι οὐδ[έν]· βίος, τέλος, πόνος, which was translated by its editor as 'Plus rien; vie, c'est mort et misère,' but may rather be rendered 'Nothing remains any longer; the sum of things is life, death and toil'. This pessimism is ■ feature frequently apparent in popular thought and poetry of Hellenistic and Imperial times⁹⁶.

A thought common in consolations and also in epitaphs is that life is enjoyed on loan. We meet with it as early ■ Alexis:

ἀλλοτρίακ' ὅτι

ζωὴν ἔχομεν ἅπαντες, ἣν ὅταν δοκῇ

πάλιν παρ' ἐκάστου ραδίως ἀφείλετο (sc. τὸ δαιμόνιον⁹⁷).

'Because the life we have is not ours: God takes it back from each one lightly when He thinks fit.' The creditor may be Nature, Time, Fate or the Fates, a god or gods; more often he is not specifically mentioned⁹⁸. One expansion of the idea

⁹⁶ ταῦτα is equivalent to ταῦτα οὕτως ἔχει ὁ βίος, τὸ τέλος ὑμῶν τοῦ βίου ταῦτα, or ὁ βίος ἔχει. Among the amplifications used are ταῦτα· ἐκ γῆς γὰρ εἰς γῆν τὰ γαθὰ, ὁ βίος οὗτος· τί στήκεις, ἄνθρωπε, ταῦτα βλέπων; ὅταν κἀμης, τοῦτο τὸ τέλος. Cf. Loch, *Festschrift Friedländer*, 294, *Indogerm. ⁹⁷ Mouterde, *Syria*, II. 217. H. J. Rose, *Year's Work in Classical Studies* 1921/2, 50 suggests 'No more life, end, pain,' which seems to me less probable. Other commonplaces are οὐκ ἤμην · οὐκ ἤδειν · ἐγενόμην · οὐκ οἶδα · οὐκ εἰμί · οὐ μέλει μοι with its numerous variants¹⁰⁰, and the Syrian favourite οὐδεὶς ἀθάνατος, which means 'No one is not subject to death,' and is not a denial of life hereafter¹⁰¹, also ὅσα γεννᾶτε (= γεννᾶται) τελεῖτε (= τελεῖται), 'All things that are born die'¹⁰², and εἰς αὐτὸ ἐγεννήθης, 'Thou wast born to have this end'¹⁰³. § 5

At the same time there is evidence for a certain dissemination of more clearly philosophical ideas. Some years ago there was found at Philadelphia in Lydia ■ slab inscribed

οὐ γενόμεν Σάμιος κείνος ὁ Πυθαγόρας,

ἀλλ' ἐφύην σοφίῃ(=η?), τῷ(=ταὐτὸ) λαχὼν ὄνομα,

• τὸν πόνον ἐνκρεΐνας αἰρετὸν ἐν βίῳ....

('I was not the famous Pythagoras of Samos, but I was ■ Pythagoras in wisdom and in name, and I regarded toil as the thing to choose in life'), and accompanied by a relief representing the Pythagorean Τ (symbolical of the Two Ways), with a man in repose on one side, a man toiling on the other, and a youth accompanied by *Asotia* or Debauchery matching one accompanied by *Arete* or Virtue¹⁰⁵. Brinkmann, who was the first to notice the Τ, showed that Neopythagorean influence was here to be recognised¹⁰⁶. Prof. Weinreich has recently explained the arrangement of studs in the shape  on the front of a statuette of Cybele found at Pergamum ■ due to the Pythagorean view that 10 is the sum of 1, 2, 3, 4: this conclusion, if accepted, would be important, since the statuette has been dated in the second century B.C., which would make it an early indication of the Neopythagorean movement¹⁰⁷.

Certain recollections of philosophic thought are probably to be explained as literary reminiscences¹⁰⁸. At the same time, there is reason to believe that much philosophic propaganda was carried on under the Empire. This is one of the new features of the Greek world after Alexander. The older philosophers had in general been more akin to professors than to missionaries, seeking in fact to teach those who would learn and not striving to save mankind from the danger of error.

¹⁰⁸ Thus the Stoicism of C.I.L. XIII. 8371 (= Riese, *Das rheinische Germanien*, 2353), *spiritum mouere cuncta, spiritum esse quod deum*, is probably due to ■ recollection of Virg. *Georg.* IV. 221 ff., *Aen.* VI. 724 ff.

Epicurus struck a different note. In his letter to Menoeceus we read, 'Let no one young delay the pursuit of philosophy, let no one old grow weary thereof; no one is too young or too old for that which is healthful in the soul¹⁰⁹.' We find a like enthusiasm in Lucretius, and in the confession of faith which Diogenes of Oenoanda caused to be inscribed in ■ portico, at some date in the second or third century of our era, 'Being now by reason of old age at the setting of life and all but on the point of leaving it with ■ fair hymn of praise, for the perfect enjoyment of all pleasant things, I wished to give help now to all men of parts, lest death should come on first¹¹⁰,' and a little later 'Since as ■ have said most men suffer alike from false opinions as if in a plague, and the number of sufferers increases, since by copying one another they catch the disease like sheep and it is right to give help to future generations, for they are ours even if they are yet unborn, having regard further to the love of mankind and the duty of giving help to strangers who are at hand, forasmuch ■ the benefits conferred by the written word are spread abroad I decided to use this colonnade and set forth in it the means of safety for all to see¹¹¹.' The phrase translated 'means of safety' is τὰ τῆς σωτηρίας φάρμακα, perhaps a reminiscence of Euripides *Phoen.* 893, where φάρμακον σωτηρίας is 'a means of saving Thebes'; it signifies here a remedy able to deliver from the peril of false opinions¹¹². Diogenes says later 'I say

now as always as loudly as I can to Greeks and barbarians that pleasure is the aim of the best life¹¹³.'

A similar enthusiasm marked the Cynic preachers of the early Empire, of whom Dio of Prusa is our most familiar example¹¹⁴. Their teaching was of the nature of the diatribe, which we have considered earlier. The Stoicism of Musonius and Epictetus possessed similar aims and carried on a similar propaganda, while the importance of Neopythagorean teaching is becoming more and more manifest. A prominent representative is Apollonius of Tyana, in whom this element stands out as clearly historical amidst the wild vagaries of the imagination of Philostratus¹¹⁵. It has recently been shown by Prof. Cumont that Alexander of Abonotichus belonged to the same school of thought¹¹⁶.

All this earnest activity was bound to disseminate some philosophical conceptions. It was no doubt promoted by the compilation of convenient summaries of dogma, like the *Λόγος διδασκαλικὸς τῶν Πλάτωνος δογμάτων* of Albinus passing under the name of Alcinous and the kindred *De Platone et eius dogmate* of Apuleius¹¹⁷; a similar epitome of Platonism seems to lie behind Diogenes Laertius III. 70 ff., many of the *Dialexeis* of Maximus Tyrius¹¹⁸, and the *Epitome*

¹¹⁶ *Revue de l'histoire des religions*, LXXXVI. (1922) 202 ff. There was perhaps also some anti-Pythagorean propaganda, cf. Lucian, *Alex.* 4, ἀλλ' εἴ τις τὰ χεῖριστα καὶ βλασφημότατα τῶν ἐπὶ διαβολῇ περὶ τοῦ Πυθαγόρου λεγομένων, οἷς ἔγωγε οὐκ ἂν πεισθελὴν ὡς ἀληθέσιν οὖσιν, ὅμως συναγάγοι ἐς τὸ αὐτό, πολλοστέον ἂν μέρος ἅπαντα ἐκεῖνα γένοιτο τῆς Ἀλεξάνδρου δεινότητος.

¹¹⁷ The *Λόγος* is assigned to Albinus by Freudenthal, *Hellenistische Studien*, III. p. 297 ff. That it is based on the ■■■ source as the work of Apuleius is demonstrated at length by Th. Sinko, *De Apulei et Albini doctrinae Platonicae adumbratione* (*Diss. phil. class. Ac. Litt. Cracov.* XLI. (1905) 131 ff.), 3 ff. (he argues p. 13, 22, that Apuleius also used Plato, which is reasonable, and p. 41 f. that the *Liber περὶ ἐρμῆνης* also is closely related to Albinus). On Gaius as a fountainhead of such thought cf. K. Praechter, *Hermes*, LI. (1916) p. 510 ff., *P. W. Suppl.* III. 535, and on this literature in general G. C. Field, *C.Q.* XIX. (1925) 6 ff.

of Arius Didymus¹¹⁹. Traces of this doxographical knowledge are frequent¹²⁰. It has been observed that the Platonism of the Platonic summaries is not identical with that of Plato. Thus Apuleius and Alcinous deny that the world ever came into being¹²¹: the definition of the three parts of the soul, and their localisation in the body, the substitution of the Stoic *φρόνησις* for *σοφία* as the virtue of the reason, the definition of *σωφροσύνη* ■ the virtue of Desire, all belong to the school tradition¹²². This school tradition is of more importance for the later history of Greek thought than is the original teaching: its existence seems to account for ■ curious habit of quoting inherited arguments in a kind of shorthand¹²³.

As for the school tradition, it may be noted that one work of Albinus ■ named *Τῶν Γαῶν σχολῶν ὑποτυπώσεων Πλατωνικῶν δογμάτων βιβλοὶ ι'*. Bousset, *Jüdisch-christliche Schulbetrieb in Alexandria und Rom*, p. 3, refers to the *Προειδόμεναι σχολαὶ* of Phanas and to the *σχολαὶ Ζήνωνος* used by Philodemus in his *Περὶ ἡθῶν καὶ βίῳ*: the emphasis Bousset lays on the intellectual background of Philo and of Clement of Alexandria makes his book very valuable. The school tradition, again, is the basis of the philosophic thought of Origen's adversary Celsus (K. W. Schmidt, *Jahrb. phil. Fak. Gött.* (1922), II. p. 69 ff.).

■ As Sallustius gives the arguments against astral fatalism in ix. (cf. p. lxxii ff. *infra*). His *τινες* (p. 4. 28), *τις* (p. 22. 20, 24), *οἱ τὸν κόσμον φθέροντες* (p. 26. 4: cf. THE INTELLECTUAL BACKGROUND

The tradition represented by these epitomes is of considerable importance for the study of Sallustius¹²⁴. It contains as fixed components:

- the requirement of natural attainments (*φύσις*) and their development (Albin. i., Sallust. i.):
- the assertion of the perfect nature of the Supreme Being (Albin. x., Apul. I. 5, Max. T. VIII. 10, XVII. 9, Sall. i.), under whom are set two inferior classes of gods (Apul. I. 11, cf. Albin. xv., Sall. ii. vi.):
- the doctrine that the universe has neither beginning nor end in time (Albin. xiv., Apul. I. viii., Sall. vii. xiii. xvii.), the description of the four elements, the seven planetary spheres and the surrounding immobile sphere (Albin. xiv. f., Apul. I. 11, cf. Sall. vii.):
- the assertion of the soul's supremacy over the body (Albin. xxiii., Apul. I. 13, Sall. viii.), of its tripartite nature (p. xxxviii, *supra*), the explanation thence of virtues and vices (Albin. xxix., Apul. II. 6, cf. Sall. x.: they agree that virtues are perfect only when found together):
- the discussion of Providence: the view that God cannot be credited with evil or our moral responsibility denied, the functions of Fate and Fortune (Albin. xxvi., Apul. I. 12, Sall. ix.):
- the mention of daemones as intermediaries between God and man (Albin. xv., Apul. I. 12, *De deo Socratis* VI. p. 13, Thomas, Sall. xiii.¹²⁵).

Such conceptions were popularised by little handbooks. By noting these ideas as they occur in the treatise of Sallustius we may make some attempt to isolate the more characteristic elements in his thought and to seek their source¹²⁶.

uses the phrase *ὡς οἱ τὰ ἐκείνου ἀκριβοῦντες μνημονεύουσιν* (xxiii. p. 141. 17 Geffcken) in mentioning a view ascribed to Thales.

¹²⁴ I follow a hint given by Hobein, *op. cit.* 40.

¹²⁵ Cf. Plut. *De def. orac.* 13, p. 411 E, R. Heinze, *Xenokrates*, 109. To mention details, there are these further points of contact. The universe is ageless (Albin. xii., Apul. I. viii., Sall. xvii.), circular motion is appropriate to *νοῦς* (Albin. xii., Apul. I. viii., Sall. vii.). Apul. II. viii. as Sall. xi. discusses the state after virtues and vices; Albinus treats it after virtues and friendship (xxxiv.), and Apuleius returns to the subject later, II. xxiv.

¹²⁶ In stressing the element of school tradition in Sallustius and in others we do not necessarily deny that they made what they thus inherited their own. It may be of service to quote E. Meyer's dictum on Cicero, *De re publica*, 'das überkommene Gut ist durchaus sein geistiges Eigentum geworden' (*Caesars Monarchie*, 1800).

CHAPTER II

THE CONTENT OF THE TREATISE

We may now proceed to analyse the *Περὶ θεῶν καὶ κόσμου* section by section¹.

i. Those who would learn about the gods must be men of parts and well educated, so that they may have in themselves something akin to what they are to learn. They must be free from popular errors; they must also know those true conceptions which are common to all mankind. Such are the goodness, the impassibility, and the changelessness of every god.

The demand for natural gifts and training in the learner is common to all introductory treatises². Sallustius improves on the commonplace with *ἐν ὁμοίῳ τι ἔχωσι τοῖς λόγοις*³.

¹ Most of the parallel passages quoted from other Neoplatonic texts are borrowed from Orelli or his predecessors.

² Cf. Albin. i., Galen, "Ὅτι ὁ ἀριστος 4, ii. p. 8 Müller=i. p. 61 K. The view that natural gifts, teaching, and practice are necessary is traced back to Protagoras by A. Burk, *Die Pädagogik des Isokrates* (*Stud. Gesch. Kult. Alt.* XII. 3/4, 19 f.); cf. B. Appel, *op. cit.* 46 ff., for its popularity.

Julian states his view of education, *Ep.* 61 (=42 H.), παιδείαν ὀρθὴν εἶναι νομίζομεν οὐ τὴν ἐν τοῖς ῥήμασιν καὶ τῇ γλώττῃ πολυτελὴ εὐρυθμίαν ἀλλὰ διαθέσιν ὑγιή νοῦν ἐχούσης διανοίας καὶ ἀληθεῖς δόξας ὑπὲρ τε ἀγαθῶν καὶ κακῶν, καλῶν τε καὶ αἰσχρῶν, and gives a summary of what he regards as necessary truth, *Ep.* 89 b, p. 141 Bidez-Cumont [=p. 301 Spanheim] ὅσα... διδάσκει περὶ θεῶν πρῶτον μὲν ὡς εἶναι, εἶτα ὡς προνοοῦσι τῶν τῆδε, καὶ ὡς ἐργάζονται μὲν οὐδὲ ἐν κακῶν οὔτε ἀνθρώπων οὔτε ἀλλήλων.... For ἀνοήτοις δόξαις, popular errors, cf. Plat. *Phil.* 12 D, Philodem. *Περὶ θεῶν* α', xvi. 19, τὴν ἐκ ψευδοδοξίας περὶ θεῶν ταραχὴν, xk. 4, Libani *Ep.* 819. 2 F. (=730 W.) καὶ γὰρ εἰ διέστηκεν ἡμῶν τῇ περὶ τὸ θεῖον δόξῃ, βλάπται μὲν ἂν αὐτόν, εἴπερ ἐξηπάτηται, παρὰ δὲ τῶν συνήθων οὐκ ἂν εἰκότως πολεμοίτο. Sallustius clearly implies that the masses could not understand true theology; cf. Julian, vi. p. 188 D, 196 D, Iambl. *Protr.* vi. p. 40. 8, xii. p. 60. 8. W. C. Wright, *Julian*, II. 418 f. has rightly remarked ■ the limited nature of the field touched by Julian's revival.

³ Cf. iii. p. 2. 25, πάντα τὰ ὄντα ὁμοιότητι μὲν χαίρει.

THE CONTENT OF THE TREATISE

The importance assigned to *κοινὰ ἔννοια*, universal ideas, is usual since the rise of Stoicism, which valued the argument from *consensus hominum*⁴; it may be noted that earlier Aristotle used it in maintaining the immortality of the soul; all men, he said, pour libations to the dead⁵. The rhetorician Theon states that all men have an *ἔννοια* that the gods have forethought for us⁶; the Epicureans did not deny that there was an *ἔννοια* of the existence of gods, and Lucretius explains its origin from two considerations perhaps due to Aristotle⁷. Julian regards this belief as one naturally possessed by men, and due in the first instance to the contemplation of the sky⁸.

The definition of divine perfection given as among these *ἔννοια* is a Platonic commonplace as applied to the Supreme Being⁹. Sallustius extends it to the whole Pantheon, rejecting once and for all those attributes which critics of mythology, from Xenophanes onwards, attacked, while clinging, as we shall see, to a belief in that mythology as enshrining truths.

ii. They must be taught that the gods never came into being (what is immortal, possessed of the first power, and impassive, cannot come into being), are incorporeal, are not limited by space, and are not separated from the First Cause or from one another any more than thoughts from the mind, knowledge from the soul, or perceptions from any living being.

On *ἀγαθός* cf. p. lvi, n. 81 *infra*.

That whatever comes into being must perish is a commonplace of Greek thought¹⁰. As applied to the gods, it involves a considerable change of traditional ideas, as most of them had birth-legends. The *first power* here mentioned is defined by Proclus as 'not controlling some things and not others, but having anticipated in itself the powers of all existing things alike¹¹.' Of incorporeality we hear more in xiii. (p. 24 ff.). The assertion that the gods are free from limitations of space is possibly meant to counter Christian polemic¹².

This view of the gods as functions of ■ First Cause had a certain popularity in the fourth century: it was ■ compromise which suited the tendency to monotheism¹³. As for ἡ πρώτη αἰτία, Plato speaks of the creator as ἀριστος τῶν αἰτίων¹⁴, and Aristotle uses αἰτία of the generative impulse¹⁵, of the moving impulse in the universe¹⁶, and of the final cause¹⁷. Cicero uses *caussa* in a personal way¹⁸, and Seneca says 'Juppiter is the first of all causes, and the others are dependent on him¹⁹.' Proclus speaks commonly of ἡ πρω-

THE CONTENT OF THE TREATISE

τίσση αἰτία²⁰, and the Christian Philoponus uses ■ similar phrase²¹. *πρώτη αἰτία* was therefore a familiar expression.

iii. Why did the ancients leave these simple statements and use myths? This very enquiry is ■ useful exercise. Myths are divine as can be inferred from their ■ by inspired poets, the best philosophers, the founders of mysteries, and the gods speaking in oracles. They are divine because they must be like the gods if they are to please them and win their favour for us. Myths, then, imitate the gods and teach the foolish simply that the gods exist, the wise their nature and character. This saves the former from contempt, the latter from sloth. The universe can be called a myth; the outer shell veils the inner realities. Still, why ■ the myths ■ strange? Surely it is in order that man may regard the stories ■ mere cloaks wrapped round the secret truth.

Sallustius faces a difficulty. Men can allegorise myths and reconcile them with Neoplatonic tenets; but why should the myths exist? The apologist Aristides said pertinently, 'If the histories of the gods are mythical, they are merely stories; if they refer to natural phenomena, it is no longer gods who have done and suffered these things; if they are allegorical, they are myths and nothing else²².' The divergence of philosophic teaching and popular belief was recognised by Plutarch and by the rhetorician Alexander: the latter attempted a reconciliation²³.

spired poets is common enough²⁵; founders of rites are so quoted by Julian²⁶; poets, lawgivers and philosophers are adduced by Plutarch (*l.c.*) as supporting belief in the existence of the gods. As for the reference to oracles, it will be remembered that a collection of *Oracula Chaldaica* enjoyed great authority among Neoplatonists, ■ did the prophecies of Claros in the world at large²⁷. Myths must be divine in order to please the gods and win their favour²⁸. They reflect and reproduce the divine nature in every aspect and activity, and the universe can be called a myth. So Iamblichus says 'Just as Nature has in a way set the stamp of invisible thoughts on visible objects²⁹.' The belief that nature likes to be concealed is expressed by Julian³⁰.

The argument that myths cause man to use his wits, if any, rests on a familiar commonplace, known to us from Virgil. 'The great Father himself willed it that the path of cultivation should not be easy: he was the first to cause the fields to be tilled by skill, sharpening human intelligence by toil³¹.'

THE CONTENT OF THE TREATISE.

Origen makes a similar application thereof, saying 'God, wishing man's nature to be exercised everywhere, that it might not remain idle and without a conception of the arts, created him with needs, whereby his very need might compel him to invent arts, some to provide food, some to provide shelter; for in truth it was better for those who would not seek and ponder divine things to be in difficulty, that they might use their intelligence to discover arts, rather than to be at ease and therefore despise intelligence everywhere³²'; in general his attitude towards difficult stories in the Bible presents a striking analogy to this view of myths³³. The concluding idea, that the very incongruity of myths is of high value in that it reminds us that they conceal truth, occurs in Julian's *Speech against the Cynic Heraclius*³⁴, which presents a view of myths closely resembling that maintained above.

iv. Some myths are theological and concerned with the actual natures of the gods; some are physical and concerned with their actual effluences in the universe; some are psychical and concerned with the activities of the soul itself; some ■■■ material; and there are mixed myths.

This classification is perhaps peculiar to Sallustius, but constructed on the usual lines³⁵. The allegorisation of myths

³⁴ p. 222 D; sometimes Julian says emphatically that myths are really-suited to children, cf. R. Asmus, *op. cit.* 5. In illustration of the view that it is desirable that men of intelligence should be compelled to study philosophy we may note the statement in ■ Hermetic text (*ap. Stob.* I. 41. 1, p. 273 Wachsmuth, p. 390 Scott), ὁ δὲ εὐσεβῶν ἄκρως φιλοσοφήσει· χωρὶς γὰρ φιλοσοφίας ἄκρως εὐσεβεῖν ἀδύνατον. For the contrast of the many and the few cf. Julian, IV. p. 157 D, δοίη δ' ὁ μέγας Ἥλιος μηδὲν ἐλαττόν (sc. τοῦ Ἰαμβλίχου) μετὰ περὶ αὐτοῦ γινῶναι, καὶ διδάξαι κοινῇ τε ἅπαντας, ἰδίᾳ δὲ τοὺς μαρθάνειν ἀξιούς.

³⁵ Aphthonius, analysing μῦθοι (= fables), gives ■ kinds τὸ λογικόν, τὸ ἠθικόν, τὸ μικτόν (p. 59 Walz), defines each, and illustrates the genus. The rhetorician

had become very common; popularised by the Stoics, it was spread abroad in such treatises ■ the *Homeric Allegories* of Heraclitus and a work *On the Life and Poetry of Homer* wrongly ascribed to Plutarch, and reached wide circles³⁶. Porphyry's work *De antro nympharum* is an elaborate example.

The story of Kronos can be treated ■ belonging to any one of these three categories.

Theologically, the god is intellectual, and the action of intellect ■ directed inwards³⁷. Therefore he may be said to devour his children.

Physically Κρόνος is equated with Χρόνος, time³⁸. Time devours his children, that is, his parts.

Psychically, Κρόνος is typical of the soul, whose activities remain within itself.

Sallustius here seeks to make acceptable a myth which met with much criticism. So Pausanias, after recounting the Arcadian story that Rhea, after giving birth to Poseidon, offered Kronos a foal to swallow, remarks, 'When I began this work I used to look on these Greek stories as little better than foolishness; but now that I have got as far as Arcadia

my opinion about them is this: I believe that the Greeks "who were accounted wise spoke of old in riddles and not straight out, and accordingly I conjecture that this story about Kronos is a bit of Greek philosophy. In matters of religion I will follow tradition³⁹.' The Christians attacked this legend with vigour⁴⁰.

The worst way of interpreting myths is the materialistic, favoured by the Egyptians. To say that elements, plants, stones, animals belong to gods is reasonable: to identify them with those gods is madness.

The Greeks, as Prof. Geffcken has observed, vacillated between warm admiration and hearty contempt of Egyptian ways⁴¹. Iamblichus maintained the former attitude; his *De mysteriis* shows clearly that he would have accepted the description of Egypt as *mundi totius templum* in the Hermetic *Asclepius*, attributed to Apuleius (ch. 24). But the Julianic reaction was definitely Greek. Julian uses 'Ελληνισμός for 'paganism,' 'Ελλην, 'Ελληνικός, 'Ελληνιστής for 'pagan⁴².' (It is perhaps to him that we must trace this linguistic usage, which was destined to a long life⁴³.)

In the latter it was continually stated that the pagans worshipped the elements, and the charge was not without foundation; it was certainly held by Greek thinkers that the Egyptians worshipped the elements⁴⁴. Sallustius urges that the elements belong to the deities, just as wine belongs to Dionysus; but they are not the deities; wine is not Dionysus. He compares sacred animals, plants, and stones, which cannot be called gods except by a figure of speech. (It should, however, perhaps be observed that animals were worshipped in Egypt⁴⁵, plants invested with some measure of occult power in popular superstition⁴⁶, and sacred stones commonly adored⁴⁷.)

THE CONTENT OF THE TREATISE

Yet this rejection of Egyptian ideas is somewhat surprising, in view of the fact that Julian was a warm adherent of the cult of their gods; the latter appear frequently on his coins, and are mentioned with reverence in his writings⁴⁸.

Further, there is the mixed variety of myths, as for example that of the Judgment of Paris.

This contains

i. ■ theological element, since the supramundane powers of the gods are indicated by their being together⁴⁹;

ii. ■ physical element, since the composition of the universe from united opposites is indicated by the statement that the apple was thrown by Strife, and the varied gifts of the deities are signified by their supposed rivalry for the apple⁵⁰;

iii. a psychical element; the soul living in accordance with the senses sees beauty and none of the other powers in the universe⁵¹.

The myth here defended had been much criticised⁵².

Each kind of myth has its special appropriateness; theological myths suit philosophers, physical and psychical myths poets, mixed myths mysteries, the function of which is to give us union with the universe and with the gods.

So Julian, in the speech quoted earlier, states (p. 216 B) that myths are unbecoming to the parts of philosophy concerned with logic, natural science, and mathematics; at most, he says, they suit that branch of practical philosophy which

deals with the individual and that part of theological philosophy which relates to initiations and mysteries. This may well come from the source followed by Sallustius. The model myth given by Julian (p. 227 C ff.) might be classed as ψυχικός. This Oration and that in honour of the Mother of the Gods are coupled by Libanius in his funeral speech on the Emperor. Thinking, says he, that eloquence and piety were sisters, and seeing one completely destroyed and the other largely, he laboured that eloquence might prosper to the full and might regain its hold on men's affections; to this end he honoured those skilled in writing and himself wrote. Immediately he put forth two speeches, each the work of ■ single day, or, to be exact, of a single night; one of them smote hip and thigh a counterfeit imitator of Antisthenes, for defining[†] Cynicism with unreasoning assurance, the other says many fine things about the Mother of the Gods⁵³.

To this notion of union with the gods (συναφή) we shall return⁵⁴.

Again, the story of Attis represents an eternal cosmic process, not an isolated event in the past. As the story is intimately related to the ordered universe, we reproduce it ritually to gain order in ourselves⁵⁵. We, like Attis, have fallen from heaven; we die mystically with him and are reborn as infants. It is suitable that this festival should be celebrated at the vernal equinox, ■■ also that the Rape of Proserpine, which symbolises the soul's descent to the underworld, should be said to have happened at the autumnal equinox.

THE CONTENT OF THE TREATISE

This specimen myth is added as an awkward afterthought. It is ■ story which needed defence⁵⁶. The explanation here given has the most obvious similarity to that given by Julian in his Oration in honour of the Mother of the Gods⁵⁷. Sallustius has clear echoes of Julian's language⁵⁸, and the general sequence is the same in the two: myth, theological explanation, description of ritual, significance of time of rites, significance of the sacred season at Eleusis. Sallustius speaks of the myth, Julian, p. 173 A, of the rite. Julian gives a far more exhaustive treatment of the point and ■ different explanation, making the motive of the great mysteries in Boedromion the desire for defence when the Sun retires, the lesser mysteries being a preliminary rite in his presence. Moreover, Sallustius explains Cybele's love of Attis as arising when the primary gods were perfecting the secondary, and as resulting in the gift to him of the starry cap symbolical of heavenly powers⁵⁹; Julian, p. 166 B, theorises more elaborately;

⁵⁶ K. Praechter, *P.W.* 1. A, 1965. 30 ff., remarked that the story of Attis as here told has no connection with the classification of myths. For the criticism of the story by Christian writers cf. Geffcken, *Apol.*, 72.

■ p. 161 c ff. The theory that Sallustius uses this passage directly, as Cumont urged, has been supported recently by R. Asmus, *Woch. klass. Phil.* 1904, 238 ff.

■ For the starry cap cf. H. von Fritze, *Nomisma*, IV. 36 (Attis wearing it on coins of Pessinus), A. B. Cook, *Zeus*, I. 742, II. 385 f., M. Rostovtzeff, *J.H.S.* XXXIX. 89. It may be noted that τελειῶ (used p. 8. 8, τελειοῦντων) is a common verb in Iamblichus, as *ap.* Stob. I. 48. 8, p. 318. 10; he uses τελειώσεις *ap.* Stob. I. 49. 65, p. 454. 21, *De myst.* v. 23, p. 232. This speculation is in the spirit of his school.

Cybele, the providence preserving things subject to birth and death, loves their creative cause, and bids it create in the world of things apprehended by the intellect and not sink to the material, which sinking is typified by the passion of Attis for a nymph. The discrepancy is comprehensible. Julian expatiates freely; Sallustius is writing for a world not initiated in the truths of Neoplatonism. He therefore simplifies, and incidentally explains a familiar attribute of Attis, the *πῖλος*. Other discrepancies are of less importance⁶⁰. We must probably conclude that Sallustius used Julian's oration, but not without an independent exercise of his intelligence. How far Julian's treatment of the theme is original cannot be determined so easily. He claims as his own the identification of Attis, also called Gallos, with the Being of creative mind that makes all things down to the lowest grade of matter: yet even here he is applying the theories of Iamblichus to the story. He seems to have clothed in that philosopher's terminology a traditional belief very like that of the Naassenes, recorded by Hippolytus, or that of the *Poimandres*⁶¹. Sallustius does not follow his more elaborate developments of the theme.

Some points of detail require discussion. Rhea, whose identification with the Phrygian Mother of the gods had long been commonly accepted, is in the *Oracula Chaldaica*, a Gnostic compilation probably of the end of the second century A.D., credited with possessing and disseminating the powers or *δυνάμεις* of all things, which illustrates Cybele's

⁶⁰ Julian adds an appendix (p. 174 A ff.) on fasting (for the religious importance of which custom cf. O. Kern, *Orphica*, 47, p. 118 = Diels, *Vors.* 4, 66 B 21, ii, p. 178). He mentions the time at which the festival occurs at an earlier point than Sallustius. Passamonti, *Rendiconti acc. Lincei*, 1892, 724 f., notes other differences in this section; they are probably to be explained as simplifications by Sallustius, who certainly had a mind of his own.

⁶¹ *C.H.* I. 14: Julian's claim to originality is made p. 161 c. On this question I accept the conclusions of H. Bogner, *Philol.* LXXIX. (1923), 258 ff., esp. 260 f. He is hardly on safe ground in arguing Julian's independence in interpreting the nature of Attis from the fact that Macrobius, *Sat.* I. 21. 9, explains Attis otherwise, as solar; though it is probable (it cannot be called certain) that Macrobius follows Iamblichus in this matter, yet we must reckon with the possibility that he may have given something like this explanation in a lost work. Still, the general probabilities are in favour of Julian's having himself made this application of philosophic theory to the myth.

gift of heavenly powers to Attis⁶². The view of Sallustius (p. 8. 7) that matter begins at the Milky Way occurs in Julian, but not, it seems, elsewhere⁶³. The normal Greek idea was that the moon is the upper boundary of the world of Becoming (as opposed to the higher regions of Being); the Milky Way is commonly the path of the Sun, the path of the gods, or the path of the blessed dead⁶⁴. The notion that the Nymphs preside over Becoming (p. 8. 10) may in part originate in cult; they are called *γενέθλια* in an inscription found at Phaleron⁶⁵. Sallustius speaks cautiously of the way in which Attis left Cybele, possibly to avoid any suggestion of imperfection in the divine nature; Julian talks plainly of his *παραφροσύνη* or infatuation⁶⁶. As for *πεσόντες ἐξ οὐρανοῦ* (p. 8. 19), the belief that man is a fallen god is an old one in Greece; we find it in Empedocles, in the Orphic tablets, and in other Neoplatonic texts⁶⁷. The doctrine of the descent of the soul from heaven

■ Julian, p. 165 C, 171 A. H. ⁷¹ So possibly we should interpret the Orphic θεὸς ἐγένου ἐξ ἀνθρώπου B 20. 9, p. 177 Diels=Olivieri c A² p. 16=Kern 32 f, p. 108). Zalmoxis is said to have taught the Getae a ritual to make themselves immortal (cf. Hdt. IV. 94, G. Kazanrow, *Klio*, XII. 355 ff.). The question of how man could become god interested men deeply. In *P. Berol.* 13044, col. iii. 28 ff. (U. Wilcken, *Sitz. Ber. preuss. Akad.* 1923, 161 f.), Alexander asks a Gymnosophist τί ποιῶν ἂν τις γένωτο θεός; and receives the unsatisfactory answer ■ μὴ δυνατόν ἐστὶν ἀνθρώπῳ ποιῆσαι εἰ ποιήσειέν τις (as we read later in Plut. *Alex.* 64). Religion might offer ■ solution; ■ Syrian dedication to Lencothea (Cumont, *Cat. Sculpt. Inscr. Mus. Cinquantiennaire*², 166 ff., n. 141) has the phrase τοῦ ἀποθεωθέντος ἐν τῷ λέβητι, which refers to some ritual presence of boiling in a cauldron of regeneration (cf. L. R. Farnell, *J. H. S.* XXXVI. 41 ff.). Magic also might help; an ἀπαθανatismós is preserved in the great magical papyrus of Paris. Dieterich, indeed, called this a *Mithrasliturgie*, and his view has won the support of Th. Hopfner, *Griechisch-Ägyptischer Offenbarungszauber*, II. 58, § 116, but it is probably right to follow Cumont, *Revue de l'instruction publique en Belgique*, 1904, 1 ff., in regarding it as a product of syncretism in Egypt.

Religious ecstasy can of course produce ■ belief in the worshipper that he is identified with the god, cf. Dieterich, *Mithrasliturgie*², 97 f., 240, Rohde, *Psyche*², II. 14 ff., H. J. Rose, *Aberystwyth Studies*, IV. 26 (a probable explanation of Eur. *Bacch.* 580 f.: the character there called Dionysos in the MSS. is ■ votary who now feels that he is a Bakchos in the full sense, and has attained unity with the god). For the magical claim to be ■ particular deity cf. *P. Par.* I. 1018, *P. present ■■ divine⁷². The ideas of ritual rebirth and of the recommencement of life thereafter ■■ a small child are to be found elsewhere in mystery religions of the Empire⁷³. What is said about the fast (p. 8. 20) is important, as suggesting that enthusiastic devotees kept a fast from March 15th, when the solemnities began, till March 24th, probably with special austerity from March 22nd (the day against which *arbor intrat* is marked in the calendar); Sallustius distinguishes between abstinence from bread and other impure food, and *νηστεία*, or real fasting, after the cutting of the tree, ritually borne in on the 22nd. For the joyous celebrations which followed we have other evidence⁷⁴.

The argument on the seasons of festivals can be paralleled from Macrobius, who, in a section probably based on Iamblichus, infers that these rites are particularly connected with the Sun from the fact that the *Hilaria* is fixed at the vernal equinox⁷⁵. Attis was so closely associated with the seasons that on a sarcophagus now in the Barberini collection his pine-crowned figure is substituted for that of Winter, and put with those of Summer, Autumn and Spring⁷⁶.

May my words give no offence to the gods or to the great dead who have written these tales!

So Sallustius closes his discussion of myths, as Herodotus his disquisition on Heracles⁷⁷.

v. The reader must next learn of the First Cause and the divine hierarchy, of the nature of the universe, of mind and soul, of providence, fate, and chance, of virtue and vice, of the good and evil constitutions arising thence, and of the origin of evils. 'Each of these is ■ large subject; still, there is no harm in my treating them briefly, to the end that people may not be entirely ignorant of them.

Sallustius here indicates the scope of his treatise from τὴν πρώτην αἰτίαν (p. 10. 14) τὸ ἀρκέσει ταῦτα (p. 24. 15), after which come discussions of controversial points. He defines clearly his purpose in writing this epitome of necessary truth.

The First Cause must be one, for that is the supreme number, and all things must share in it. It is not soul or mind or being; it is good and superior to being: so the brave prefer the good to mere being.

The dignified position of the number One is ■ legacy from Pythagoras: we find it in the *Oracula Chaldaica* and in Neoplatonic texts⁷⁸. Iamblichus describes the Supreme Being in a similar but more personal way⁷⁹. The First Cause must be, says Sallustius, not mind⁸⁰ or soul, and must be superior to being. This last point is Platonic⁸¹; Sallustius supports it with an *argumentum ad homines*⁸².

vi. Next come the orders of gods:—(a) Those in the universe, twelve in number, three to create, three to animate, three to harmonise, three to guard the universe; a triad is necessary for each operation since each has ■ beginning, ■ middle, and an end; their duties ■ symbolised by the attributes of their cult statues. The other members of the Pantheon have a subordinate existence; so Dionysus exists in Zeus, Asclepius in Apollo, the Graces in Aphrodite. The twelve occupy the twelve celestial spheres.

(β) Those outside the universe: some make the being of the gods, some the mind, some the soul. They are treated in more recondite works.

The first division into mundane and transcendental deities is found earlier⁸³. Sallustius refers for the latter to the treatises concerned with them: his interest lies in showing how the familiar pagan gods and goddesses find a place in the scheme, not in giving a complete exposition of philosophic dogma. For the three parts of each act we have a parallel in Iambl. *De myst.* II. 7, p. 85, but the triad is ■ natural combination of deities⁸⁴, and the number twelve as old as Pindar⁸⁵. The

Jupiter is merely the *dispensator* of the highest god, ch. 27 [cf. Kroll, *P.W.* VIII. 806. 19]; as here Zeus is one of the *ἐγκόσμιοι*, not the *πρώτη αἰτία* or even one of the *ὑπερκόσμιοι*. Comparable also is the distinction between *πηγαί* and *ἀρχαί* in the later Neoplatonism (cf. Kroll, *De orac. Ch.* 37). Iambl. *De myst.* VIII. 8, p. 271. 10, distinguishes *περικόσμιοι* and *ὑπερκόσμιοι θεοί*.

The *Oracula Chaldaica* explained how the triad proceeded from the monad (Kroll, 18) and gave an arrangement of gods in four triads differing from ours (*ib.* 37). Proclus, *Theol. Plat.* VI. 10, p. 367, 22, p. 403, gives ■ similar account of the functions of the gods.

function of *harmonising* implies a survival of the belief held by Pythagoras and Heraclitus that the established order of things is a *ἁρμονία*⁸⁶. Hephaestus here has a somewhat unusual eminence, for which Neoplatonic parallels exist⁸⁷.

The idea that divine character is indicated by the attributes of cult statues occurs in Julian and in Macrobius, and may therefore fairly be ascribed to Iamblichus⁸⁸. It is important to note that the ancients conceived of the gods as thus represented; this is shown by various accounts of visions, and by a section of the *Oneirocritica* of Artemidorus dealing with the appearance of gods in sleep⁸⁹.

What is said of the subordination of deities is in accordance with tradition. The sonship of Dionysus was peculiarly intimate, and his cults blend with those of Zeus⁹⁰, as do those

Sat. i. 19. 13, *ut lyra Apollinis chordarum septem tot caelestium sphaerarum praestat intellegi, quibus solem moderatorem natura constituit.*

With p. 12. 11, *γυμνὴ δὲ ἡ Ἀφροδίτη...τὸ δὲ κάλλος ἐν τοῖς ὀρωμένοις οὐ κρύπτεται*, we may compare Suidas s.v. *χάριτες*, ii. ii., p. 1603, *καὶ παροιμία αἱ Χάριτες γυμναὶ ἦτοι ὅτι δεῖ ἀφελῶς καὶ φανερώς χαρίζεσθαι* (a Stoic thought, cf. Sen. *De ben.* i. 3. 5). Sallustius argues from the Praxitelean type, which was used as a cult-type (cf. Lucian, *Amores* 13, Marcus Diaconus, *Vita Porph.* 59, *B. M. Guide to the antiquities of Roman Britain*, p. 122, fig. 136 [pipeclay copy of image in shrine], Lippold, *Gemmen*, 25. 8), not the conical stone of Paphos, or the older Greek types. At the same time, it should be remembered that the earlier types did under the Empire frequently surpass in popular esteem the finest products of Greek art (to the coin references given *C.R.*, 1925, 62, add Imhoof-Blumer, *Nomisma*, viii. 1 ff. and C. T. Seltman, *Athens, its history and coinage*, 88 f.). How a fixed mode of representation was in fact part of the religious tradition is illustrated by an inscription in a Mithraeum at Ostia, *Notizie degli scavi*, 1924, 73, *deum uetusta religione in uelo formatum et umore obnubilatum* (deum probably being Juppiter-Caelus).

of Asclepius and Apollo⁸¹; again, Aphrodite and the Graces are closely associated⁸².

In assigning spheres to the gods Sallustius avoids the reproach of identifying deities with elements or planets⁸³. Earth is the sphere of Hestia⁸⁴, water of Poseidon, air of Hera, fire of Hephaestus. We are not told by our author that Poseidon is water and Hera air, as Eustathius says⁸⁵, or that Hephaestus is fire, as the Stoics said. These four elements or *στοιχεῖα* are regarded as forming four zones or *σφαῖραι* beneath the planetary spheres, arranged thus:

FIRE
AIR
■
WATER
EARTH⁸⁶.

Above are the six planetary spheres assigned to their usual owners: Apollo has that of the Sun, Artemis that of the Moon; the places of Aphrodite, Hermes, Zeus, and Ares are obvious. The seventh and furthest from the earth, that of Saturn, is assigned not to Kronos but to Demeter, who in

The aether is assigned to Athena, not to Zeus, as is more common⁹⁹. The heaven, that is here the sphere of the fixed stars, is shared by all the deities.

vii. The universe itself must be uncreated and immortal. It is impossible that it should perish; therefore it cannot have had any beginning.

There are, says Tzetzes, four views of the philosophers¹⁰⁰:

- (1) The universe is uncreated and imperishable.
- (2) It is created and perishable (ascribed to Meton).
- (3) It is uncreated, except for certain perishable parts.
- (4) It is created, but by Divine Providence will not perish (ascribed to Plato and Pythagoras¹⁰¹).

The matter had long been disputed: Diodorus Siculus

mentions views (1) and (2)¹⁰², Philo in his treatise *De aeternitate mundi* (1), (2) and (4), quoting for (1) Aristotle and Ocellus, for (4) the *Timaeus* (at second hand¹⁰³), Hesiod, and Moses. We may pause to analyse the earlier portion of this book.

Causes of destruction must be external or internal¹⁰⁴. But there is nothing outside, as all things were put together to make the universe. The universe will continue to be one, because like matter will take the place of anything that fails¹⁰⁵; whole, because all being has been spent to make it; unharmed by age and disease, because bodies attacked by age and disease are overthrown by heat or cold or other opposites from outside. Nor again will anything internal destroy it; the whole is stronger than the part, and what can face external perils is strong enough to endure internal also: so cattle, horses and men are liable to die of disease *because* they can also be destroyed by the sword¹⁰⁶. This is corroborated by Plato, *Timaeus*, p. 32C. Since therefore the universe is imperishable, it must be uncreated; for dissolution is the fate of whatever has come into being, freedom therefrom of whatever has not; as the poet says,

τό τοι γεγόμενον κατθανεῖν ὀφείλεται.

Again, when a compound perishes, it breaks up into its components. We men are composed of the four elements: on our death they return to their freedom, as the tragedian (Euripides, called ὁ τραγικός earlier, II. 6, as is Aeschylus in IX. 49) says. Such a compound is unnatural¹⁰⁷. On the other hand, in the universe the elements occupy their right and proper places. Further, the nature of each object wishes to preserve it for ever: so must the nature of the universe.

¹⁰² I. 6.

■ This is indicated by φασιν, IV. ■ 13, and the passage is the famous θεὸς θεῶν..., one of the commonest Platonic quotations in writers of the Empire. In quotations from this treatise the Roman figure gives the chapter in Cumont's edition, the Arabic the section as in the *editio minor* of Cohn and Reiter.

¹⁰⁴ So also Philolaus *ap.* Stob. I. 20. 2, p. 172. 13.

¹⁰⁵ This point is expressed more elaborately by Sallustius in ch. xvii.

¹⁰⁶ Cf. p. lvi *supra* for this style of reasoning.

¹⁰⁷ Here we have the old fifth-century antithesis of φύσις and νόμος. The source of the poetic fragment is unknown.

Now this nature is invincible and superior to all hostile forces.

There remains that argument on which very many pride themselves, thinking it irrefragable. Why should God destroy the universe? That He may not again make a universe or that He may make another? The first suggestion, that He makes disorder out of order and changes His plan, implies a defect of intellect in Him, and is unworthy of Him. As for the second, another universe would be worse than this, like it, or better. If it is worse, so is its Creator; if like, He has wasted labour in a childish way: if better, He has become better and therefore was imperfect when He made the present universe. But God is always like Himself and cannot become better or worse. We change and therefore what we make is perishable.

Stoic theories of the destruction of the universe by fire are untenable, for the destruction of the heavens involves the destruction of the stars, whom they regard as visible gods, and of Providence, the soul of the universe. Chrysippus is unconvincing. Since time has no beginning, neither has the universe¹⁰⁸.

This brief analysis shows a striking similarity to the discussion of the matter given by Sallustius here and in the excursus which forms ch. xvii. In the latter there are slight additions and omissions, but the essence of the argument and much of its detail is the same¹⁰⁹. We have noted earlier that the core of Philo's thought is a school tradition, and this is particularly clear in the *De aeternitate mundi*¹¹⁰. It may

¹⁰⁸ Here follow detailed criticisms of some remarks of Critolaus, and later more objections to Stoic teaching: ■ these E. Norden, *Fleck. Jahrb. Suppl.* xix., p. 440 ff., may be consulted. Since F. Cumont's edition (1891) there can hardly be any doubt of the authenticity of this work. Noteworthy in it is the similarity of xvi. 82 with Sallustius xvii. p. 32. 19; the relevant words are quoted in the critical note.

¹⁰⁹ Additions are:

- (β) The destructive agent must move in a circle or in ■ straight line, but....
- (γ) Destruction must be in form ■ in matter, but....

even be, as Bousset argued, notes of a lecture taken down by Philo and written up by him¹¹¹.

The conclusion to be drawn is fairly clear. Though the treatise was known to S. Ambrose and to Zacharias of Mytilene, who show a knowledge of Philo's other writings, it is most unlikely that Sallustius was acquainted with it¹¹². In him as in Philo we must recognise a school tradition, communicated by oral teaching or by a handbook. Some of its arguments were, it seems, used by Proclus in his lost work on the subject: but Proclus had learning beyond the range of handbooks¹¹³. The fixity of these traditional bodies of argument is further illustrated by the fact that Joannes Philoponus makes but seven Scriptural quotations in his reply to Proclus, a work which fills 646 pages in H. Rabe's edition. It is perhaps a fair inference that he found arguments ready to hand, and did no more than expand them¹¹⁴.

imitate mind and have ■ circular motion, the former Eastward, the latter Westward. The four elements imitate soul and move in straight lines, fire and air ascend, earth and water descend. All this has ■ purpose. Moreover since the celestial bodies differ in mode of motion from the elements they must differ from them in nature also and be devoid of the ordinary physical properties of matter. The universe being ■ sphere, since gravitation takes place towards the earth, the earth must be its centre.

These observations on the motions of heavenly bodies are traditional. Sallustius sees ■ purpose in them, ■ in all the order of the universe, of which he speaks in ch. IX¹¹⁵. The sharp distinction which he draws between the physical qualities of the elements and of the celestial bodies agrees with the general Aristotelian and post-Aristotelian differentiation of the sublunar and the upper zones.

The universe is seen to be a sphere, because of the Zodiac¹¹⁶. That the centre of a sphere is its lowest part is a doctrine well attested in antiquity¹¹⁷.

All these things are made by the gods, ordered by Mind, and set in motion by Soul.

For this Mind and this Soul we have abundant evidence¹¹⁸.

viii. Our human souls are perfected by ■ divine Mind ■ sight is by the Sun¹¹⁹. Some are reasoning and immortal, ■ unreasoning and mortal; the former come from the primary gods, the latter from the secondary.

This Mind which perfects our souls is part of the system of Iamblichus, wherein it ranks after Being and before Soul¹²⁰. We find also there as here the doctrine that there are two kinds of souls: this is a marked feature of Hermetism, in which it was taught that certain individuals have divine and immortal souls, while others, lacking νοῦς, have mortal souls¹²¹. This conception of ■ limited immortality has its roots in Hellenistic philosophy, and is found in Gnosticism; it is clearly expressed in a fragment of the *Oracula Chaldaica*, and again by Iamblichus¹²². Further, just as Sallustius derives the

In the *Kore Kosmou*, ■ 16 (*ap.* Stob. I. 49. 44, p. 390 W.=p. 466. 3 ff. superior souls from the primary gods, the inferior from the secondary, so the *Oracula* derive the truly blessed from the Sun and from Zeus¹²³.

Soul is that by which the animate differs from the inanimate. The unreasonable soul is subject to the passions of the body, the reasonable despises it and contends against the unreasonable.

Ψυχὴ is here defined as vital principle¹²⁴. It is not stated directly here, but follows from X., that reasonable and unreasonable soul exist simultaneously in ■ man; this is a commonplace of Hellenistic philosophy. In Iamblichus also it is complementary to the general belief in two kinds of soul¹²⁵; so in the *Poimandres* εἰς is assigned ■ dual nature¹²⁶. The struggle of the reasonable soul and the unreasonable is again a commonplace¹²⁷.

The soul must be immortal, because it knows the gods. Every good soul has employed Mind, and this is not brought into being by bodies.

thought commonly expressed¹²⁹. Such knowledge is in virtue of divine Nous, used by every good soul¹²⁹.

It is in antithesis to the body, best when that is failing using the body as ■ instrument, it does not dwell in it, any more than the mechanist is in the machine: yet the soul can err because of the body's defect, as arts can fail from injury to the instruments.

The antithesis of soul and body is treated here as by Plotinus¹³⁰. The soul's mode of controlling the body was a disputed point. Iamblichus gives six views:

- (1) The soul directs the body as a steersman steers ■ ship. This does not tie it to the body.
- (2) The soul is like a charioteer driving his chariot, and participating in its motion.
- (3) Soul and body share a joint activity.
- (4) The soul is a part of the whole living being.
- (5) The soul is like the art directing the tools, as it were a living rudder.
- (6) The body is for creation the slave of the powers that use it, but those powers are not bound to individual bodies¹³¹. (This is given as the view of the stricter Platonists, as for instance Plotinus.)

He allows that the body can cause the soul to err¹³².

This kind of argument for Providence is as old ■ Xen. *Mem.* I. 4. 6, and very common¹³³. Sallustius reinforces it by a reference to contemporary oracles and cures¹³⁴. The decay of belief in the former, lamented by Plutarch, was succeeded by a genuine revival of faith, notably in the prophecies given at Claros¹³⁵. The consultation of oracles had been forbidden in 357 A.D.: Julian removed the ban¹³⁶. Scepticism on this subject was old¹³⁷. As for marvellous cures, the Epidaurian

¹³⁴ I say contemporary, because he says γιγνόμεναι, not γενόμεναι. The two are closely connected, as the article is not repeated before θεραπεῖαι. This corresponds to facts: miraculous cures were often ascribed to the performance of the commands of an oracle, so at Colophon, Aristid. xxv. i., p. 491 Dindorf, at Delphi, *inscr.*, *Klio* xv., p. 46 (Pomtow). An interesting document of the second-century revival is ■ fragmentary papyrus containing ■ dialogue on oracles: the freethinker's doubts were perhaps settled by ■ coup de théâtre (W. Weber, *Philol.* LXIX. 228 has drawn attention to alliance coins of Side and Delphi, also of Perga and Delphi, dating from the latter half of the third century (but his view that they illustrate Hellenic national consciousness in its struggle with native cults is hazardous: Perga had Pythian games, cf. G. F. Hill, *B. M. C. Lycia*, lxxix., and Apollo had long been at home in Side, where he had perhaps a non-Greek element, cf. C. T. Seltman, *A hoard from Side (Numismatic Notes and Monographs, 22, 1924), 10 f.* A rapprochement with Delphi is therefore not remarkable, and we must be slow to infer much from it). At the same time many minor oracular shrines had become insignificant in the first century of our era (Plut. *De def. orac.* v., p. 411 E), and the oracle of

inscriptions show that their evidential value was realised to the full; we hear of unbelievers who were converted or solemnly warned¹³⁸.

This providence costs the gods no effort; they exercise it in virtue of ■ function, ■ the sun warms and illuminates. That dismisses the Epicurean objection, that we make the gods drudges. Providence, then, is the incorporeal care of the gods for our souls and bodies.

That God's care for the world costs him no labour is argued by Theon in a *θέσις θεωρητική* on the subject 'Do the gods take thought for the universe?'¹³⁹. That He acts in virtue of a function, *δυνάμει*, is stated in the popular work *Περὶ κόσμου* wrongly ascribed to Aristotle¹⁴⁰.

Sallustius clearly alludes to the first of the *κύριαι δόξαι* of Epicurus¹⁴¹. Epicureanism continued to exist in the fourth century; Lactantius answers at length its case against the

Zeus Ammon declined in Hellenistic and Imperial times (A. B. Cook, *Zeus*, I. 353).

¹³⁸ Cf. Ditt. *Syll.*³ 1168. 23 ff., 35 ff., with O. Weinreich's notes, also *Suppl. epig. gr.* II. 58 (4th cent. B.C.; confession of sin before multitude at Epidaurus by man who had failed to pay his vow to Asklepios). In the third century Philostratus mentions the fame of the temple of Asklepios at Lebena (*V. Apoll.* IV. 34, cf. A. Walton, *The Cult of Asklepios* [Cornell Studies, III. 1894], 114; we may note the frequency with which Asklepios appears on the provincial coinage of Crete under Trajan and Hadrian, cf. Svoronos, *Numismatique de la Crète*, 347 n. 79 f., pl. XXXIV. 17, and 350 ff. n. 101 f., 107 f., 113, pl. XXXV. 15, 23). In 384 A.D. Libanius in his speech on behalf of the temples speaks of people going to Cilicia (that is, to Aegae: though there were other Cilician cults of Asklepios, cf. A. Walton, *op. cit.* 116) and returning disappointed because the shrine had been destroyed (XXX. 39, III. 108 Förster. The destruction is commonly ascribed to Constantine, cf. the note of Gothofredus *ap.* Reiske, II. 187, n. 78).

¹³⁹ *Progymn.* 12, I., p. 250 Walz (he adds that God can have the help of daemones and heroes, and other deities). Such considerations could not be foreign to the rhetorical schools, where the prosecution of Epicurus for impiety formed a subject of *suasoriae* (cf. Himer. *Ecl.* III., *Proleg. in stas.* VII., p. 43. 21 ff. Walz, R. Kohl, *Rhet. Stud.* IV., p. 87 f.).

belief in Providence¹⁴². But there is no need to suppose that Sallustius had any first-hand acquaintance with Epicurean texts; he is here well within the bounds of the commonplace.

Fate is the ordinance of the celestial bodies, controlling human affairs and in particular our bodily nature. Fate does not compel us to sin; ■■■ cannot escape our moral responsibility. The most that can be admitted is that human weakness or bad education may turn Fate's blessings to evil; so sunshine is good for all, but may be prejudicial to the fevered.

Fate, Εἰμαρμένη, as a fixed conception owes its importance chiefly to the rise of Stoicism and to the spread of astral ideas in the Greek world¹⁴³. The general idea that bodily health is dependent on celestial phenomena is older¹⁴⁴. ■

The definition given by Sallustius is in harmony with the idea which we find in the *Poimandres*, that Fate is the rule of the seven lords of the planets; man is subject thereunto in respect of the mortal element in him (as contrasted with the divine). In another Hermetic text we read that the 36 decans (each being lord of a third of ten degrees of the zodiac) are responsible for the overthrow of kingdoms, revolts (or de-

Iamblichus asserts that freedom from Fate comes thanks to the divine part of the soul, and speaks of human freewill¹⁴⁶. In him we find, as here, the argument that our deficiencies may turn Fate's good gifts to evil, and the same simile to illustrate it¹⁴⁷. The view here rejected, that the stars are responsible for man's entire life and conduct and can compel him to sin, was that common in astrology¹⁴⁹. There were however dissentients¹⁵⁰, and a regular polemical literature in defence of free-will¹⁵¹. Some of the traditional arguments against astral fatalism follow.

If Fate rules all, why do whole nations practise queer customs? (Their members cannot all have the same horoscopes.)

This commonplace is so briefly expressed as to be unintelligible unless so expanded. The instances quoted are usual. The eating of fathers by the Massagetae is mentioned by Philo (who calls them Scythians), Jewish circumcision by Philo, Bardesanes, Origen, Procopius, and *Anonymus in Job*, Persian incest by Bardesanes, Gregory of Nyssa, and the *Anonymus* (Philo ascribes this custom to the Scythians)¹⁵². Firmicus Maternus quotes the argument as applying to all national characteristics, physical and moral¹⁵³.

Oen. fr. xxxiii. col. iii. 10, p. 41.

¹⁵⁰ Firmicus Maternus, *Math.* i. 8, mentions the view that the beginning and the end of life are fixed by fate, the interim being in our power; for the determination of birth and death cf. Claudian, *Cons. Stil.* II. 434 ff. Lucilius, *A. P.* xi. 159, would not allow astrology thus much.

¹⁵¹ Well represented by Nemesios of Emesa, *De nat. hom.* ch. xli., who agrees almost to the word with Chalcidius, Basil, and Gellius (cf. Gercke, *Rh. Mus.* xli., p. 266 ff., H. A. Koch, *op. cit.*, p. 37 ff.). Philo (*De providentia*), like Sallustius, first rejects Epicurean attacks, then turns against Stoic determinism.

¹⁵² Much material on this topic will be found in Wendland, *Philos Schrift über die Vorsehung*, 1892, 24 ff. (tabular comparison, p. 30 ff.), F. Boll, *Fleck. Jahrb. Suppl.* xxi. 181 ff. As for circumcision, Philo mentions the custom also as practised in Egypt, Arabia, Ethiopia, Origen as in Arabia, and Bardesanes, Origen, and Procopius refer to the self-mutilation of the Amazons (Philo and Bardesanes (?) mention also Egyptian animal-worship). The allusion in Sallustius to Persian incest was correctly interpreted by K. Praechter, *B. ph. W.* 1893, 617. Julian, *In Galil.*, p. 217. 2, treats circumcision, presumably that he may taunt the Christians (p. 228. 21) for their failure to practise it.

THE CONTENT OF THE TREATISE

Why do astrologers call Saturn and Mars malignant, and then represent them ■ good, attributing philosophy and kingship, military commands and treasures to them? If they talk of trines and squares, it is strange that human virtue should remain the same everywhere, but the gods change with their positions.

These inconsistent views on Saturn and Mars are well attested¹⁸⁴. The second point criticised is the belief that the planets exercised different influences when separated by 90° and when separated by 120° from the Eastern horizon; this theory was earlier attacked by Plotinus¹⁸⁵. Sallustius em-

¹⁸⁴ Saturn and Mars are proverbially evil, cf. Serv. *ad Aen.* iv. 610, Herm. *ap.* Stob. i. 5. 19, p. 77 W. (=p. 530. 13 S.: στυγνὸς Κρόνος), Mayer, *Roscher*, II. 1475. But for φιλοσοφία cf. Firmicus, *Math.* III. 2. 18, p. 101. 26, *in nono loco Saturnus ab horoscopo constitutus magos famosos facit uel philosophos opinatos...et frequenter facit philosophos capillatos* (*ib.* III. 7. 1, p. 155. 23, Mercury produces philosophers, *ib.* III. 12. 6, p. 183. 6, Mars and Venus), for βασιλεία cf. Vettius Valens, II. 16, p. 71. 9 (Mars and the Sun), also II. 11, p. 66. 16 (Mars in ■ certain position: γίνονται γὰρ ἡ στρατηγοὶ ἡ τύραννοι), I. 22, p. 45. 27 (Ζεὺς Ἀρῆς Ἑρμῆς...ἀποτελοῦσιν...ἡ βασιλικὰ ἡ πολιτικὰ πράσσοντας), Firmic. *Math.* III. 2. 10, p. 99. 19, *Saturnus...reges faciet ac duces et maxima largitur insignia potestatis*, *Pap. In *C. C. A. G.* II., p. 200 (=O. Kern, *Orphica*, 289) we find the general statement ὁ Ἀρῆς εἰς Κρόνον, ὅσα ὁ Κρόνος εἶωθε βλάπτειν, σῶζει οὕτως ταῦτα (cf. another quotation, *Orphica*, 292). Iambl. *De myst.* I. 18, p. 55, refers to Saturn and Mars, but more shortly: this coincidence with Sallustius occurs shortly before that noted p. lxxi *supra*. Plot., *Enn.* II. 3. 6, attacked the view that Mars and Venus produce adulterers. (It should also be remembered that Kronos, the god of the planet Saturn, was in Syria and elsewhere sometimes identified with the Sun-god, cf. Boll, *A. R. W.* XIX. 342 ff., Reitzenstein, *Das iranische Erlösungsmysterium*, 177 ff.)

plays against it a commonplace familiar to us from Horace's line

*Caelum, non animum mutant qui trans mare currunt*¹⁵⁶.

Finally, to cast in a horoscope good birth or bad birth of ancestors shows that some things are merely indicated by the stars, and not all things are caused by them: the position of the stars at the moment of birth cannot be the cause of prior events.

This again is a commonplace¹⁵⁷. Sallustius seems however to make a compromise between the determinist view and that of Porphyry, who like Plotinus would not have allowed that the stars control events¹⁵⁸; in this he may be following Iamblichus. The popular view was no doubt that which assigned absolute power to the stars¹⁵⁹.

Providence and Fate are concerned with peoples, with cities, and with individuals. So is Fortune, that function of the gods which orders for good diverse and unexpected happenings; accordingly cities, as being composed of diverse elements, ought to pay special honour to Fortune. Her power is limited to the sublunar region.

A place had to be found for Tyche, not in the aspect she presents in the Greek novel as a capricious mistress of events, full of spite and malice¹⁶⁰, but rather as she appears in an invocation by a lyric poet, 'O Fortune, beginning and end of mortals, thou sittest on a throne of wisdom and givest honour to the works of man. The good thou givest is greater than the evil, and grace shines around thy golden wing. That which is assigned by thy balance is most blest; thou seest an escape from helplessness in our distress and bringest a

bright light in darkness, O most excellent of the deities,' and elsewhere in earlier Greek literature, as guiding men. Sallustius may also have had in mind the common cult of Agathe Tyche, Good Fortune¹⁶¹. He argues that cities should honour Tyche; so in fact they did, as late as the fourth century of our era¹⁶². The limitation of Fortune's power to the sublunar region is in accordance with a widespread idea that there is no change above the moon¹⁶³.

If bad men prosper and good men suffer poverty, it is not surprising; the good make no exertion to obtain wealth, the evil make every exertion. Prosperity will not free the bad from their vice, and the good will be content with virtue alone.

To this objection to belief in a beneficent divine order Sallustius replies as Philo had done. Hellenistic philosophy tended to assert with much emphasis that the good man is independent of external circumstances; this belief crystallised in the term *αὐτάρκεια*, self-sufficiency, which we meet as early as Democritus, and later find as almost a technical term among the Stoics¹⁶⁴.

x. Our discussion of virtue and vice requires ■ further treatment of the soul. The unreasonable element, when it enters the body, creates spirit and desire; the reasonable supervenes and produces a threefold soul consisting of reason, spirit, and desire. Their virtues are wisdom, courage, and moderation. The virtue of the whole soul is justice, in the full sense of the word. To attain this, reason must make the necessary judgment, spirit must obey reason and despise seeming dangers, desire must pursue not what appears pleasant but what is so in a reasonable way.

This chapter is connected directly with the preceding consideration of the sufficiency of virtue. It is based on the traditional Platonism of which something has been said earlier¹⁶⁵. The four 'Socratic' virtues were familiar to rhetoricians¹⁶⁶.

Accordingly in men of education you can see all virtues, in the uneducated some but not others, though virtues in such circumstances do not deserve that name. The vices are the opposite qualities: the vice of the reason is foolishness, that of the spirit is cowardice, that of the desire is license, that of the whole soul is injustice. Virtues are produced by a good polity and good training, vices by their contraries.

THE CONTENT OF THE TREATISE

That the educated man has all virtues, and that good qualities are produced by living in a city with a good constitution, are again commonplaces¹⁶⁷.

xi. Constitutions also correspond to the triple nature of the soul; the king will be reason, and his rule monarchy; the soldiers will be spirit, and their rule aristocracy, the commoners will be desires, and their rule timocracy. The opposites of these constitutions are tyranny, oligarchy, and democracy.

Plato asserts clearly that the same elements exist in the individual soul as in the state. His psychology fits his ideal social structure; it is indeed possible that Mr F. M. Cornford is right in urging that the former is based on the latter, and the latter derived from a primitive Greek social structure with three age-grades such as we see at Sparta¹⁶⁸. The classification of three true constitutions and three corrupt is due to Aristotle, and became a commonplace¹⁶⁹. As local administration still existed in the fourth century, this chapter is not mere verbiage. Neoplatonism was not inconsistent with an interest in the political wellbeing of mankind¹⁷⁰, and the author of our treatise, if the identification later adopted is correct, played an active part in public life¹⁷¹.

¹⁶⁷ For the former cf. Aristid. *Εἰς βασιλέα* i. p. 102 Dind., and further Herm. *ap. Stob.* i. 49. 4, p. 322 W. = p. 444 S., *ὅταν δὲ ἀμφοτέρω (sc. θυμός and ἐπιθυμία) ὁμονόησιν καὶ ἴσῃν ἕξιν ποιήσῃ, καὶ ἔχῃται ἀμφοτέρω τοῦ τῆς ψυχῆς λογισμοῦ, γίνεται δικαιοσύνη· ἡ γὰρ ἴση ἕξις αὐτῶν ἀφαιρεῖ μὲν τὴν ὑπερβολὴν τοῦ θυμοῦ, ἐπανισοῖ δὲ τὸ ἐνδόν τῆς ἐπιθυμίας.* Prof. Pearson reminds me of the Stoic doctrine that the ideal wise man has all virtues; we may remark that Philodem. *De ira* xxviii. 21 ff., p. 59 Wilke, lays down that no one can be just *πάθεισιν ὀργίλοις συνεχόμενος*.

For the latter, Aphthon., i. p. 88, Theon, p. 230, Nicol., p. 338, Julian, p. 248 B, 268 C (conversely a good polity is the product of a good character: cf. v., p. 10. 8. Procl. *ad Hes. Op. et Di.* 111, p. 112. 23 Gaisford). We may note Porphyry's remark, *Ep. ad Marcellam* 9, *ἀπαιδευσία μὲν τῶν καθῶν πάντων μήτηρ*.

¹⁶⁹ So in [Plut.] *De uita et poesi Homeris*, ch. 182, p. 1216 Wytt., Menand. Rh. *Διαίρεσις τῶν ἐπιδεικτικῶν*, iii. i., ix. p. 194, Doxopater, *Prol.*, vi. p. 27, Anon. *Proleg. in Hermog. Rhet.*, iv. p. 16, Theophylact. *Inst. reg.* ii. 6 (cxixvi. 269 A, B Migne). In these texts *δημοκρατία* is good, and is contrasted with *ὀλιγοκρατία* or *λαοκρατία*.

¹⁷⁰ Cf. G. Rudberg, *Symbolae arctoe* i. (1922), 1 ff.

¹⁷¹ Passamonti, *l.c.* 664, regards this as the reason why he prefers kingship. But is not this preference part of the traditional theory? Cf. Plut. *An seni res*

xii. Since the gods are good and create all things, how are there evils in the universe? They must be purely negative: no nature of evil can exist among gods or among intellects or among souls or among bodies. To suppose that evil spirits exist is impossible: the gods could not make evil spirits, and we cannot limit their creative activity. Accordingly positive evil does not exist; evil is merely something that appears in connection with certain human activities. Men sin, not for the sin's sake, but to gain some object that seems good, such ■■■ pleasure or revenge. The soul errs because it is not of the first order of being; to guard it from error the gods have created many defences, arts, sciences, virtuous accomplishments, prayers, sacrifices, initiations, laws, politics and punishments; when it has left the body it is cleansed of its sins by divine spirits.

Here we come to a very controversial problem, treated by Julian in a special treatise now lost¹⁷²; for its early history Dr E. Schröder's excellent monograph may be consulted¹⁷³. Iamblichus denied that matter was positively evil, and said that it was better to confess ignorance than to accept any lying statement to the discredit of the gods, yet he admitted the existence of evil daemones (as did Julian) and had much to say of their activities¹⁷⁴. In Proclus, however, we find a view in agreement with that here maintained. Here then our

¹⁷² πῶθεν τὰ κακά, mentioned by Suidas s.v. Ἰουλιανός, I. ii., p. 1010. 10 Bernhardt; cf. R. Asmus, *Byz. Zeit.* III. 1422. In *Ep.* 89 b, p. 141 Bidez-Cumont (=p. 301 A Spanheim), Julian says that the gods do no evil to man or to one another, in *Orat.* II., p. 90 A, B, that evil is banished from heaven and exists around earth.

¹⁷³ *Plotins Abhandlung πῶθεν τὰ κακά* (Borna-Leipzig, 1916). He remarks well, p. 194, that the scope of the discussion of this problem by Plotinus is outside the interests of Sallustius.

A belief in evil daemones was traditional; thus Chrysippus, fr. 1104 Arnim, admitted their existence, and in *C. H.* XVI. 13, p. 352. 23 R., we read that some daemones have good and evil commingled in them.

author seems to part company with Iamblichus, possibly following the lead of some disciple of his¹⁷⁵. It is not impossible that some contemporary Neoplatonists asserted and some denied the existence of evil daemones¹⁷⁶; and it is even possible that Iamblichus may in some lost work have put forward the view given by Sallustius. It is thinkable that the innovation was in part intended to strengthen the defence of paganism against Christianity¹⁷⁷.

¹⁷⁵ Procl. *De mal. subst.*, p. 214. 12 ff. Cousin, Schröder, p. 1942, 195; for Julian's opinions cf. v., p. 173 B, we need a fresh rite when the sun is waning, *ἵνα μηδὲν ὑπὸ τῆς ἀθέου καὶ σκοτεινῆς δυσχερὲς πάθωμεν ἐπικρατούσης δυνάμεως*, *Ep.* 89 b, p. 128. 5 Bidez-Cumont = p. 288 A Spanh., τὸ τῶν πονηρῶν δαιμόνων τεταγμένον φῶλον. It is of interest that Julian of Laodicea, writing circa 500 A.D., denies that any stars are evil, cf. *C. C. A. G.* iv. 105. 28 (for which reference I am indebted to Prof. Cumont).

¹⁷⁶ Iamblich. *ap.* Stob. i. 49. 32, p. 365. 16, § 37, p. 372. 11, remarks on the different opinions held at different times by Amelius, Porphyry, and Plotinus. Geffcken, *Ausgang*, 283, draws attention to divergences of opinion within the *De mysteriis*.

¹⁷⁷ The Christians regarded the pagan deities as evil spirits (cf. *Acta Maximi*, i. i., p. 121. 5 Gebh., *Mart. S. Crispi*, i. 6, p. 13. 16, *Passio S. Symphorosae*, p. 20 R., Marc. Diac. *Vita Porph.* 59, Lebas-Waddington 2498) and attributed to such the phenomena of oracular inspiration. Sallustius could say: is their existence consistent with the perfection of God? (He could also discredit the effective evidential value of Christian exorcism, for which cf. *Mart. S. Pionii*, xiii. 6, p. 107. 10 Gebh. and Abgar's letter, several times reproduced in inscriptions, C. M. Kaufmann, *Handb. altchr. Epigr.*, p. 413, Picard, *B. C. H.* XLIV. (1920), 41-69 (Philippi).)

Further, this denial of positive evil in the universe would tend to counter Christian otherworldliness (cf. S. Aug. *Civ. D.* i. 9, *qui in hoc mundo peregrinantur et spem supernae patriae prae se gerunt*, and hagiographical texts *passim*, as *Acta S. Maximi*, i., p. 122. 7 Gebh., *propterea enim me manifestavi ut tandem carens miserabili et temporali uita aeternam reciperem*, *Acta S. Epipodii*, p. 65 R. (the magistrate exhorting the saint), *ut cum oblectatione et cum gaudio quasi iuuenis austeritatem refugiens mundi huius beatitudine perfruaris*: Pionius however admitted that life was good, *Mart.* 5, p. 101. 6 Gebh.). The spread of such ideas may well have been helped by the pessimism indicated by popular gnomic poetry (cf. G. A. Gerhard, *Phoenix von Kolophon*, 265) and apparent even in the early Empire (cf. S. Dill, *Roman Society from Nero to Marcus Aurelius*, 292). Plutarch might say that the soul 'despises those who bewail and revile life as a place of evils' (*De tranq. an.* 19, p. 477 C) but they existed, and had since the beginnings of the Orphic movement. There was further a conviction that degeneration had set in (cf. Lucr. II. 1157 ff., W. Schmid, *P. W.* v. 859. 45 ff.). The courtly style continued to delight in such circumlocutions as *aureis temporibus* (*Dess.* 5520: 379-383 A.D.), *aureo saeculo* (*Dess.* 5555: c. 370 A.D.), *clementissimis temporibus* (*Ann. Epigr.* 1920. 15: Diocletian etc.), τῆς εὐδέμονος ταύτης βασιλείας (*P. Oxy.* 71. i. 4: A.D. 303), ἐν τοῖς μακαριωτάτοις ὑμῶν καιροῖς

To turn to points of detail, the view that vengeance is a good thing was normal¹⁷⁸, the statement that soul errs because it is not 'first being' agrees with the teaching of Iamblichus¹⁷⁹, and the theory that punishment is curative goes back to the *Gorgias*¹⁸⁰. Of the purgation of the soul we hear more elsewhere¹⁸¹. On Hellenistic views of sin the valuable observations of Dr K. Latte (*Archiv für Religionswissenschaft*, XX. 295 ff.) should be read.

xiii. This is ■ sufficient treatment of the gods of the universe, and of human affairs for those who are neither capable of being taught the whole of philosophy nor yet incurable in soul¹⁸².

(Ditt. *O. G. I.* 519. 9: the Philips), and the coinage presented such happy legends as O ΚΟΣΜΟΣ ΕΤΤΧΕΙ, ΕΤΤΧΕΙΣ ΚΑΙΡΟΙ, FELICITAS SAECVLI, FELICITAS PVBLICA, FELICITAS ORBIS, FELICITAS TEMPORIS, HILARITAS TEMPORVM, SECVRITAS SAECVLI, LAETITIA, but of genuine joy in life there was none too much. Libanius remarks that if all the year were like the Kalends of January οὐκ ἂν ἦσαν ἐν ὁσῶπερ νῦν λόγῳ παρὰ τοῖς ἀνθρώποις αἱ μακάρων νῆσοι (IX. 10, i. p. 395. 15 ff. Julian, *Ep.* 89 b, p. 129. 6 Bidez-Cumont = p. 289 B Spanheim, for this view: commonly punishment is regarded merely ■ ■ deterrent, yet [Aristid.] i., p. 105 Dind., hopes that it may educate; cf. *Schol. ■ Cf. Dieterich, *Nekyia* 200 ff., Norden, *Aen.* VI.² 29 ff., W. Kroll, *De oraculis Chaldaicis*, 47. Iamblich. *ap.* Stob. I. 49. 65, p. 454. 25, states that in the view of most Platonists and Pythagoreans disembodied spirits are purified by αὐταὶ αἱ μερίσται ψυχαί, in the view of οἱ ἀκριβέστεροι by more perfect souls and the one general Soul (the World-Soul, cf. lxxv, n. 118 *supra*) and by the order of the universe, and by Nous and the general arrangement of things, in the view of οἱ ἀρχαιότεροι by the visible gods, and in particular by the Sun (cf. the invocation of the Sun in Dracontius, *Romulea*, x. 540, quoted p. lxx, n. 144 *supra*, to receive the souls of Medea's children), and by the unseen creative causes, and the better orders of beings, heroes, daemones, angels and gods. Sallustius approximates to the last view. In an instance noted p. xciv, n. 223 *infra* Sallustius clearly agrees with a view described by Iamblichus ■ that of the older thinkers.

THE CONTENT OF THE TREATISE

Here commence the appendices.

I have mentioned that second things ■■■ made by first things: this is not inconsistent with my denial of creation in time. What is made by technical skill or by nature is subsequent to its creator; what is made in virtue of a function is brought into existence at the same time as its creator, since the function is inseparable (so are the sun's ■ light, fire's heat, snow's cold). Now the universe is not made by technical skill: that would account for its form only and not for its matter. Nor is it made by nature: that would necessitate that its creators should give of themselves, incorporeal though they are. As then creation must be in virtue of ■ function, the universe is coeval with the gods and cannot perish unless they lose their functional power. So those who speak of an end of the world deny the existence or the power of the gods.

Creation *κατὰ δύναμιν*, as we have seen earlier, involves no toil for the gods. The problem treated in vii. is here further considered, in the same traditional style¹⁸³.

The original Creator must have made not only men and animals, but also divine beings of various orders to fill the gap between Him and us: such intermediate stages are necessary.

The place of these intermediaries in the world-order occurs in Maximus Tyrius, but this emphasis on the divine hierarchy is probably due to the teaching of Iamblichus¹⁸⁴.

xiv. Again, how is belief in the changelessness and impassivity of the gods to be reconciled with the idea

¹⁸³ On creation in virtue of a function cf. p. lxix, n. 140, also Philol. *ap.* Stob. 1. 20. 2, p. 173. 12 (διὸ καὶ καλῶς ἔχει λέγεσθαι κόσμον εἶμεν ἐνέργειαν αἰδίων θεῶν τε καὶ γενέσιος κατὰ συνακολουθίαν τῆς μεταβλατικῆς φύσεως: this fragment is condemned by Diels, *Vors.* 1. 318, 32 B 21). On the tradition cf. p. xxxviii, n. 123, p. lxii f. *supra*. Orelli notes in this connection the distinction between two kinds of αἰδιότης by Proclus, *Inst. Theol.* 55, one static, the other dynamic.

¹⁸⁴ Max. Tyr. xi. 12: Iambl. *passim*, as *De myst.* 1. 5, p. 16. 6 ff., viii. 8, p. 271. 10 ff. Praechter, *Genethliakon Robert*, 105 ff., has urged that Iamblichus was concerned with the metaphysical problem of bridging the gap between First Being and matter. This point is important, but we must allow that he was also eager to find ■ place for much contemporary belief in his system (cf. J. Bidez, *Rev. ét. gr.* 1919, p. 36 ff.; H. Bogner, *Philol.* LXXIX., p. 262). In Nemesios we find the notion that man is the bridge between the world of sense and the world

that they take joy in the virtuous and shun the bad, ■■■ angry with sinners and ■■■ appeased by worship? The gods do not feel joy (else they would be liable to feel pain¹⁸⁵) or anger (that is an emotion), nor ■■■ they won by gifts, (that would mean that they were under the dominion of pleasure¹⁸⁶). Human conduct cannot affect the divine nature for good or for evil. The gods ■■■ always good and help us; they never harm us. We, when we are good, are by our likeness given union with them; if we become bad, we are separated from them. Our sins prevent the divine brightness from shining on ■■■ and subject us to chastising spirits: it is ■■■ false to say that the gods shun the evil as to say that the ■■■ hides himself from the blind. If by prayers and sacrifices we find release from our sins, the explanation is that by our acts and by our turning to the divine we cure our evil and enjoy the goodness of the gods again; we do not effect any change in them.

Here Sallustius averts the shafts of Christian polemic¹⁸⁷. His view of human relations with the gods agrees closely with that of Iamblichus, its probable source¹⁸⁸.

■ Cf. *contra*, Herm. *ap.* Stob. I. 41. 1 (b) § 13, p. 275 W. (= p. 428. 8 S.), πᾶν τὸ λυπούμενον καὶ ἡδεται [ζῶον θνητόν]· οὐ πᾶν τὸ ἡδόμενον λυπεῖται [ζῶον αἰδίων].

■ Here Sallustius (as Plato, *Rep.* 364 D ff.) rejects the older Greek view, δῶρα θεοὺς πείθει. An Epicurean criticism of belief that the gods can be propitiated is made by Philodem., *Περὶ θεῶν* α' πvii. 9, ἀλλὰ εἰκὸς τῷ μὲν ὑποστησαμένῳ τοὺς θεοὺς ἐν τῷ ζῆν μόνον ἱλαστικὸς ἀργαλεωτέραν εἶναι τὴν περὶ τοῦ θανάτου ταραχὴν ὥς ἂν αἰώνιους ἐφ' αὐτῷ συμφορὰς προβάλλοντι.

¹⁸⁷ Celsus carried the war into the enemy's camp, by criticising the way in which the Old Testament speaks of God's wrath (*ap.* Orig. *Contra Cels.* IV. 71 ff., VI. 53, 58). Anger is allowed to *terreni dii atque mundani* in *Ascl.* 37.

¹⁸⁸ Cf. *De myst.* I. 11, with an interesting quotation from Heraclitus (p. 40. 11), 12, p. 41. 4, ἀφθόνως οἱ θεοὶ τὸ φῶς ἐπιλάμπουσιν εὐμενεῖς ὄντες καὶ ἴλεω τοῖς θεουργοῖς, τὰς τε ψυχὰς αὐτῶν ■■■ ἑαυτοὺς ἀνακαλούμενοι καὶ τὴν ἐνωσιν αὐταῖς τὴν πρὸς ἑαυτοὺς χορηγοῦντες ἐθελόντες τε αὐτὰς καὶ ἐτι ἐν σώματι οὖσας ἀφίστασθαι τῶν σωμάτων ἐπὶ τε τὴν αἰδίων καὶ νοητὴν αὐτῶν ἀρχὴν περιάγεσθαι... VIII. 8, p. 272. 9. Iamblichus gives the same explanation of their supposed anger (I. 13, p. 43. 2): αὕτη (sc. ἡ μῆνις τῶν θεῶν) τοίνυν οὐχ, ὥς δοκεῖ τισι, παλαιά τίς ἐστι καὶ ἑμμονος ὀργή ἀλλὰ τῆς ἀγαθουργοῦ

THE CONTENT OF THE TREATISE

xv. These considerations decide the problem of sacrifice. The gods need nothing; the honours¹²⁰ we pay them ■■■ for our own benefit. Their providence extends everywhere, and all who are fit may enjoy it. Fitness is obtained by imitation, and imitation is the basis of all cult: the shrines correspond to the sky¹²¹, the altars to the earth, the images to life (that is why they are made in the likeness of living beings), prayers to the intellectual element, the magic vowels to the unspeakable powers of the sky, plants and stones to matter, and the animals sacrificed to the unreasonable life in us. From all this the gods receive no benefit, but we gain union with them.

Animal sacrifice, essential as it was to paganism, appeared repugnant to some of the best minds in non-Christian circles¹²¹. Christian polemic attacked it with vigour¹²². For the Julianic

Bidez-Cumont (= p. 294 A Spanheim) says in very similar fashion οὐδὲ γάρ, εἰ μηδενὸς ὁ θεὸς δεῖται, διὰ τοῦτο οὐδὲν αὐτῷ προσοιστέον. οὐδὲ γάρ τῆς διὰ λόγων εὐφημίας δεῖται. τί οὖν; εὐλογον αὐτὸν ἀποστερήσαι καὶ ταύτης; οὐδαμῶς. οὐκ ἄρα οὐδὲ τῆς διὰ τῶν ἔργων εἰς αὐτὸν γιγνομένης τιμῆς, ἥς ἐνομοθέτησαν οὐκ ἑνιαυτοὶ τρεῖς οὐδὲ τρισχίλιοι, πᾶς δὲ ὁ προλαβὼν αἰὼν ἐν πᾶσι τοῖς τῆς γῆς ἔθνεσι.

¹²⁰ Cf. Philo, *Spec. leg.* I. 66, p. 222 M., τὸ μὲν ἀνωτάτω καὶ πρὸς ἀλήθειαν ἱερὸν θεοῦ νομίζειν τὸν σύμπαντα χρῆ κόσμον εἶναι, νεῶ μὲν ἔχοντα τὸ ἀγιώτατον τῆς τῶν ὄντων οὐσίας μέρος, οὐρανῶν..., also R. Eisler, *Weltenmantel und Himmelszelt*, 606 f. (the code of Hammurabi prescribes the building of the temple of Sippar on the model of the heavenly temple). According to *Ascl.* 24 b *Aegyptus imago sit caeli*: in *Alchimistes grecs*, II. 18 Berthelot, ■ egg is τὸ τοῦ κόσμου μίμημα.

●¹²¹ Porphyry in his *De abstinentia* reproduced the arguments of Theophrastus and the imaginings of Dicaearchus against it: the *Corpus Hermeticum* extols λογικὰ θυσίαι (as XIII. 21). The wise Ammianus Marcellinus disapproved of Julian's hecatombs (cf. XXII. 12. 6, XXV. 4. 17, Ensslin, *Klio, Beih.* XVI. 54 ff.).

¹²² It had earlier Epicurean material ready to hand (cf. Philodem. *Περὶ θεῶν* α' 1., col. xvii. 9, quoted in n. 186, [Lucian] *De sacrificiis* 1: and for God's freedom from needs Eurip. *H. F.* 1345, Philo, *passim* [cf. Zeller, III. ii., 4028]: Proclus, like Sallustius, accepted this belief, cf. *ad Hes. Op. et Di.* 291, p. 200. 19 Gaisf.,

reaction a philosophic defence was requisite, and it was afforded by the theory of Iamblichus: he saw a natural symbolism in all the apparatus of worship and magic¹⁹³. To this conception of *συναφή*, union with the gods, we shall return later¹⁹⁴: of the acquirement of fitness by imitation we have heard in iii. and iv.

xvi. I had better say a little more concerning sacrifice. Since all that we have is given to us by the gods, it is reasonable that we should offer appropriate first fruits; further, prayers without sacrifice are mere words, whereas, if sacrifice is added, the words gain life, the word giving power to the life and the life animating the word. Moreover, the happiness of anything is in its appropriate perfection, and its perfection is found in union with its origin. So we pray for union with the gods. As then the life of the gods is the first order of life, and we too have life of a sort, our life desires union with theirs; for this it needs an intermediary, and between life and life the intermediary is life. For this reason in former times all sacrificed, and the truly blessed sacrifice now, and that with minute accuracy of ritual.

The question of sacrifice was, says Iamblichus, 'the one

ad Tim. 18 B, 1. 44 Diehl). But though Proclus starts from the same basis, his explanation of our offerings differs markedly from that of Sallustius.)

■ Cf. *De myst.* v. 23, p. 233. 10, ταῦτα τοίνυν κατιδοῦσα ἡ θεουργικὴ τέχνη κοινῶς τε οὕτως κατ' οἰκειότητα ἐκάστῳ τῶν θεῶν τὰς προσφόρους ὑποδοχὰς ἀνευρίσκουσα, συμπλέκει πολλάκις λίθους βοτάνας ζῶα ἀρώματα ἄλλα τε τοιαῦτα ἱερὰ καὶ τέλεια καὶ θεοειδῆ κάπνεται ἀπὸ πάντων τούτων ὑποδοχὴν ὀλοτελῇ καὶ καθαρὰν ἀπεργάζεται. We have in Sallustius these material means and the characteristic word ὑποδοχή: for λίθους βοτάνας cf. *De myst.* iii. 27, p. 166. 15, iv. 13, p. 197. 13. χαρακτήρες are magic symbols, as for instance the vowels ΑΕΗΙΟΥΩ, commonly connected with the planets (cf. Th. Hopfner, *P. W.*, *Suppl.* iv. 4 1183 ff., Dornseiff, *Das Alphabet in Mystik und Magie*, 35 ff.): Julian mentions them, p. 216 C, ὅπερ [δὲ] δὴ τῶν χαρακτήρων ἡ ἀπόρρητος φύσις ὠφελεῖν πέφυκε καὶ ἀγνωσμένην θεραπεύει γοῦν οὐ ψυχὰς μόνον ἀλλὰ καὶ σώματα καὶ θεῶν ποιεῖ παρουσίας (the bracketing of δὲ is due to Mr E. Harrison), which should be rendered, 'And this benefit the unspeakable nature of magical letters naturally gives, even though not understood; it certainly heals not only souls but bodies also, and causes the gods to appear' (the Loeb edition mistranslates). What Sallustius says about images tacitly rejects the constant suggestion that the pagans worshipped them as gods (for this cf. Geffcken, *Apol.*, 325, s.v. *Götterbilder*; for its justification in fact *J. T. S.* xxvi. 175 f.).

question considered alike by those concerned with learning and by those less versed in dialectics¹⁹⁵. The first explanation here given, that sacrifice is of the nature of an ἀπαρχή or offering of first fruits, is not regarded as adequate by Iamblichus¹⁹⁶. Sallustius puts it forward, perhaps because he wishes to strengthen his case with every available argument,

‘One sure, if another fails.’

His main thesis is that urged by Iamblichus, that sacrifice is a bond of union between creator and creature, a σχέσις συνδετική τῶν δημιουργούντων πρὸς τὰ δημιουργούμενα¹⁹⁷; in Iamblichus we find also the view that the mediation between life and life must be by life. Sallustius then sides with Iamblichus against Porphyry, who rejected animal sacrifice; he is with Iamblichus also in the importance which he attaches to prayer¹⁹⁸. It need hardly be said that this view that the gods need nothing from a man is foreign to early Greek thought, ■ is also the passionless state ascribed to them¹⁹⁹.

For the views of prayer held by Plotinus, Porphyry, and Iamblichus cf. H. Schmidt, *R. G. V. V.* iv. i. 44 ff., esp. 50 f. (analysis of *De myst.* v. 26, in which note p. 238. 14, ἔργον δὲ οὐδὲν ιερατικὸν ἄνευ τῶν ἐν ταῖς εὐχαῖς ἱκεριῶν γίνεται. Plotinus regarded prayer as effective, not in itself, but by reason of the sympathy of all parts of the universe). In general on the development of prayer cf. ■ excellent remarks in Schrader, *Reallexikon indog. Alt.*², ii. 139 f.; Pliny, *N. H.* xxviii. 10, says that it was an essential part of all ancient Roman sacrifices. ■

¹⁹⁹ Here Sallustius is again in agreement with Iamblichus, who says *De myst.* v. 10, p. 214. 1, εἰ δὲ ἀδύνατον ἡμᾶς ἀρχηγούς εἶναι τῶν δαιμόνων, τῷ αὐτῷ λόγῳ καὶ τῆς τροφῆς αὐτῶν ἐσμεν αἰτίοι (sc. ἀναίτιοι). As for Porphyry's contention (which

PROLEGOMENA · CHAPTER II

The statement that all who are truly happy (*εὐδαίμονες*) now do sacrifice suits a supporter of Julian very well²⁰⁰.

xvii. We have stated that the gods will not destroy the universe. It must be added that its nature is indestructible. It might be supposed to be destroyed

by itself:

by something else which exists, corporeal or incorporeal; ■ rectilinear movent (*i.e.* an element) clashing against an orbital movent (*i.e.* ■ planet), or *vice versa*;

by something else not in the sum of things existent.

But in none of these ways is its destruction possible.

Destruction must be in form: but this does not affect matter, since new products arise,

or in matter. But matter either perishes and is not replaced (if so, why has it lasted so long?)

or perishes and is replaced (if so, either

(a) *from things existing*: but if the supply lasts for ever, so will the universe. If it does not, all things existing perish.

or (β) *from things not existing*: This is impossible: still, were it true, while non-existents are the universe will continue to be. Surely non-existents do not also perish).

If matter survives but will lose all form, why do we not see this happening to parts of the whole? In any case, on this hypothesis it is the beauty, not the existence, of things, that will perish.

remarked that the facts seem to be opposed to it, cf. Schrader, *op. cit.* II. 138; the tradition that Pythagoras prohibited all animal sacrifices is perhaps due to Timaeus, cf. A. Delatte, *Vie de Pythagore de Diogène Laërce* (*Mém. Ac. Roy. Belg.* XVII. ii., 1922), 175 ff., 192 f.

²⁰⁰ Cf. Julian, p. 186 D, πόλει παραβάλλοντες εὐδαίμονι, πολλῶν μὲν ἱερῶν, πολλῶν δὲ ἀπορρήτων τελετῶν πλήρει, and the somewhat later Orphic *Lithica*, 100, p. 112 Abel, θυσίαι δ' ἱεροπρεπέες τελέθουσιν, | ὥς ἀγαθοὶ βέζουσι βροτοί. For the statement that in the past ■ ■ used to sacrifice cf. ■ quotation from Julian p. lxxxiii, n. 189 *supra*, also Gaius, *Inst.* II. 55, uoluerunt ueteres maturius hereditates adiri, ut essent qui sacra facerent, quorum illis temporibus summa observatio fuit, et ut creditores haberent a ■ ■ consequerentur.

Further, what perishes must

(a) *be resolved into its components*: then something else results.

or (β) *vanish*. If so, surely God would vanish.

If His power prevents that, it cannot be limited to self-preservation.

Again, if the universe perishes, it must perish

(α) *according to nature*. But this would imply that it came into being contrary to nature; and what can ■■ perish ■■ can ■■ destroy; on the contrary we ■■■ change elements, but we cannot destroy them.

(β) *contrary to nature*: this would require the existence of another nature changing the nature of the universe. But this is unproved.

Whatever perishes is subject to old age; and yet the universe is unchanged after the immense lapse of time. This should prove sufficient for those who require stronger proofs. May the universe be propitious to me.

This excursus again continues ch. vii., and its subject-matter has been discussed earlier: the emphasis here is on the fact that the universe is in its nature indestructible²⁰¹. We may note as of interest the confident assertion that the universe shows no signs of age: some thought otherwise²⁰².

²⁰¹ p. lx ff. *supra*: λέγουσι, p. 32. 3, is another indication of the presence of the tradition. It is stated p. 30. ■■ that things incorporeal, as φύσις and ψυχή, preserve things incorporeal. φύσις must be explained (as by Orelli) by a reference to Iamblich. *ap. Stob.* 1. 5. 18, p. 81. 9, φύσιν δὲ λέγω τὴν ἀχώριστον αἰτίαν τοῦ κόσμου καὶ ἀχωρίστως περιέχουσαν τὰς ὅλας αἰτίας τῆς γενέσεως, ὅσα χωριστῶς αἱ κρείττονες οὐσαὶ καὶ διακοσμήσεις συνεκλήφασιν ἐν ἑαυτοῖς.

Praechter, *Woch. klass. Phil.* 1900, 184, has noted the emphasis of τὴν φύσιν, p. 30. 7; this chapter is not a mere repetition of what has been said in vii.

²⁰² As Aul. Gell. III. 10. 11, *et nunc quasi iam mundo senescente rerum atque hominum decrementa sunt*, cf. *Passio S. Symphoriani*, v. p. 70 R., *cum aeternam mundi uertiginem rapax tempus obducit*, [Apul.] *Ascl.* 26, *haec et talis senectus ueniet mundi*, also references given by R. Hirzel *ap. Assertions of the agelessness of the universe meet us in Theocr. XVI. 71, [Arist.] *De mundo*, p. 397 a

As for the final prayer, the universe is often credited with divinity²⁰³.

xviii. Again, the fact that unbelief has arisen in certain parts of the earth and will often arise hereafter should not disturb men of sense. Such unbelief does not affect the gods, any more than can our worship; the human soul, moreover, being of ■ middle nature, cannot always judge aright. Further, all parts of the universe cannot enjoy the providence of the gods equally at all times, any more than the whole body can possess all five senses. That is why the founders of religious feasts established also days on which there should be no worship: it ■■■ a concession to human weakness. Contempt of the gods or deification of kings in ■ former life may bring as its punishment deprivation of knowledge of the gods in this.

ἀθεΐαι here must refer primarily to Christianity²⁰⁴. Sallustius in effect replies to the Christian argument from their success²⁰⁵. There is ■ quiet irony in *περί τινος τόπους τῆς γῆς γενέσθαι*²⁰⁶. For the argument that all parts cannot

The view of the deification of kings as ■ sin of the first magnitude is of considerable interest, whether we accept or reject Prof. G. Apotheosis after death is to be the fate of all righteous souls, according to xxi., and therefore the cult of dead kings or emperors hardly comes under this condemnation. The *Conuiuium* shows that Julian would not suspect *lèse-majesté* here: there is no reason to suppose that he approved worship of kings as gods in their lifetime (*Script. orig. Const.* p. 53 Preger = p. 215. 31 Bidez-Cumont, Διὸς εἰδωλὸν καὶ Ἀφροδίτης ἐν τῷ τόπῳ ἀνατεθεικὼς καὶ ἑαυτὸν is not very weighty testimony, while *Orat.* I., p. 8 A καθάπερ θεὸν διατελοῦσι σεβόμενοι occurs in an encomium, and implies no more than the Homeric θεὸς ὡς τίετο δῆμῳ, *Odyss.* XIV. 205). In Virgil's Inferno Salomoneus, who claimed such cult, is placed with Phlegyas who says (*Aen.* VI. 620)

discite iustitiam moniti et non temnere diuos:

so we may have two traditional types of sin here. (The suggestion that these words καὶ τοὺς... ἐκπείν can be regarded as ■ Christian interpolation is very improbable.)

For the difference between worship of living and worship of dead kings cf. Herm. *ap.* Stob. I. 49. 45, p. 408 W. (= p. 496. 12 S.), ὁ μὲν βασιλεὺς τῶν μὲν ἄλλων θεῶν ἐστὶν ἐσχατος, πρῶτος δὲ ἀνθρώπων· καὶ μέχρις οὗ ἐπὶ γῆς ἐστὶ, τῆς μὲν ἀληθοῦς θειότητος (θεότητος Scott *bene*) ἀπήλλακται, ἔχει δὲ ἐξαιρετὸν τί παρ' ἀνθρώπους ὃ ὁμοίον ἐστὶ τῷ θεῷ. A criticism of honours to living kings is probably to be seen in Rhian. *ap.* Stob. III. 4. 33, p. 227 Hense (= Meineke, *Anat. Alex.* 199 f.: Klinger, *Eos*, XXVI. 79 ff., summarised *Phil. ledge of the gods which man may lose for his sins in ■ previous incarnation is γνῶσις in the heightened sense, 'a mystical knowledge conveying a definite illumination'²¹¹.

cism of Caesar-worship, with, ■ its general drift, 'let the men of Nicaea perform their rites in honour of Caesar as the Athenians perform their rites at Eleusis; we need not imitate them': probably this is aimed at some new development (cf. edd. *ad loc.*, also L. Deubner, *Sitz. Ber. Akad. Heidelb.*, 1919, xvii. ■ ff., who suggests that some innovation not much prior to the date of writing, that is, the third century of our era, is meant, and that the city concerned is Alexandria).

²¹¹ Cf. *C. H.* xviii. 13, p. 359 R., ἡ γνῶσις τοῦ παντός, ἡ περὶ ζωὴν πᾶσι πρυτανεύει, Iambli. *De myst.* iii. 3, p. 107. 14, εἰδὼς δὲ (sc. ἡ ψυχὴ) τοὺς λόγους τῶν γιγνομένων ἀνάγῃ πρὸς τοὺς αἰτίους αὐτῶν θεούς, δύναμιν ἀπ' αὐτῶν προσλαμβάνει καὶ γνῶσιν ἀναλογιζομένην ὅσα τε ἦν καὶ ὅσα ἔσται..., vi. 7, p. 247. 4, τίνα ἔχει τὴν δύναμιν διὰ τὴν πρὸς θεοὺς ἔνωσιν ἣν παρέσχεν αὐτῷ τῶν ἀπορρήτων συμβόλων ἡ γνῶσις, Julian v., p. 180 A, δίδου πᾶσι μὲν ἀνθρώποις εὐδαιμονίαν ἥτις τὸ κεφάλαιον ἡ τῶν θεῶν γνῶσις ἐστίν, cf. 336 C, and E. Norden, *Agnostos Theos*, 87 ff.

γνῶσις can also mean no more than the knowledge of the name of the deity whose activities are observed. This ■ should, I think, alone be used to explain ἀγνώστῳ θεῷ in Acts xvii. 23 (on which cf. Wikenhauser's full treatment, *Neutestamentl. Abh.* viii. 3-5, 369 ff.), and οὐκ ἄγνωστος θεός in *P. Giss.* i. 3 (cf. O. Weinreich, *A. R. W.* xviii., 34 ff.). The dedication was probably made because the spot was observed to be the seat of manifestations of divinity: so we read in *Aen.* viii. 351 (cf. Norden, 62)

*hoc nemus, hunc, inquit, frondoso uertice collem
quis deus incertum est, habitat deus.*

Such uncertainty commonly attached to heroes (cf. Rohde, *Psyche*³, i. 174), and to deities of healing. Marinus, in his *Life of Proclus*, relates (ch. 22, p. 25 Boissonade) that there was at Adrotta a shrine of a god thought by some to be Asclepius, because he had a sacred table, and at times gave oracles directing people to the recovery of their health or to deliverance from the greatest dangers. Others, because of a vision of two young ■ hurrying thither on horseback, regarded the shrine as belonging to the Dioscuri (they were at Byzantium credited with giving λύσις τῶν παθῶν, Hesych. Miles. vi. 15 [*F. H. G.* iv., p. 149]). Proclus for his piety was vouchsafed the truth: the god referred to Iamblichus as an authority for the correct names, Machaon and Podalirius, and was most complimentary. Another vague figure was the female daemon of Menouthi, whose activities were superseded by SS. Cyrus and Joannes (cf. L. Deubner, *De incubatione*, 90). The sanctity of holy places is older and more lasting than that of deities: cf. for illustrations in Greece M. P. Nilsson, *History of Greek Religion*, 23 f., 299, A. M. Woodward, *J. H. S.*, xliv. 255 f. (on Hymettos), 264 (Delphi), 273 (Naxos), in Asia Minor W. M. Ramsay, *Pauline and other Studies*, 172 ff., in Italy A. Della Seta, *Museo di Villa Giulia*, i. 279 ff. (cult at Satricum on site of temple of Mater Matuta before temple was built): S. Hilary of Poitiers inveighs against the continued cult of high places (cf. Zingerle, *Sitz. Ber. Ak. Wien*, cviii. (1885), 968). So also ritual is sometimes older than the deity to whom it is addressed, cf. L. Deubner, *A. R. W.* xiii. 490 f., *Neue Jahrb.* 1911, 321 ff. for Roman examples, Nilsson, *op. cit.* 86 (Thargelia), 91 (Thesmophoria), 93 (Eiresione), 98 and *Arch. Jahrb.* xxxi. (1916), 317 ff. for Greek examples.

xix. Nor is it surprising that punishment for this and for other offences does not follow directly ■■■ their commission. In ■■■■■■■■■■ the soul punishes itself: moreover it is immortal and must not pay the full penalty in a short time. Further, it is necessary that there should be human virtue, and immediate punishment would make men act righteously from fear alone. Souls are chastised ■■■ leaving their body; while bearing their punishment they have with them the unreasonable element, in whose company they sinned: hence arise the spectral forms seen on tombs, especially of malefactors.

A speaker in Plutarch complains that the slow action of Divine justice destroys faith in Providence, and Proclus discusses this question in his treatise *On ten reasons for doubting Providence*²¹²: hence the importance of the question to Sallustius.

That the guilty soul punishes itself is a rhetorical commonplace²¹³. That merit lies in honest action uninspired by fear

case the ethnographical parallels collected by Sir James Frazer (*Pausanias*, II. 35) suggest that we need not refer the phenomenon to any highly developed religious speculation. It is, further, improbable that the desire to include all deities for completeness' sake is here. For that cf. the Byzantine exorcisms mentioning 72½ diseases or 365½ reptiles and wild beasts (F. Pradel, *R. G. V. V.* III. iii. 73, Perdrizet, *Negotium perambulans in tenebris*, 19, 17); it may be observed in the dedications to ἀγνωστοί θεοί at Olympia (Pausan. v. 14. 8), at Pergamon (Hepding, *Ath. Mitth.* XXXV. (1910), 455 f., Weinreich, *l.c.*, 29 ff.), and in ■■■ πάνθεος περιβωμισμός (Weinreich, *D. L. Z.* 1913, 2959). (The *di incerti* of Varro are merely part of his classification: cf. E. Bickel, *Der altrömische Gottesbegriff* (1921), 13 ff.) It may be added that, whereas Sallustius uses γινώσκειν in the usual Hellenistic way, εἰδέναι has earlier a nuance of mysticism, as [Eur.] *Rhes.* 973, σεμνὸς τοῖσιν εἰδόσιν θεός (cf. Pind. fr. 137, οἶδε μὲν βίου τελευτάν, οἶδεν δὲ διδόδοτον ἀρχάν): this use is clearly parodied by Aristoph. *Nub.* 1241, καὶ Ζεὺς γελοῖος δμνύμενος τοῖς εἰδόσιν (the teaching of Strepsiades involved an initiation-scene: cf. Dieterich, *Rh. M.* XLVIII., 275 ff. (= *Kleine Schriften*, 117 ff.). It should be noted that the conception of philosophical teaching as ■■■ initiation and the application thereto of terminology taken from the mysteries continued in use after Plato, cf. E. Bréhier, *Idées philosophiques et religieuses de Philon*, 242 ff., Porph. *Ad Marc.* 8).

■ ■■ *De sera numinis vindicta*, 3, p. 549 B; viii. p. 153 Cousin. Iamblichus, *De myst.* IV. 5, p. 187. 4 refers to punishment for sins in ■■■ previous life as explaining sufferings. (In *C. H.* XVI. 10 ff., p. 352 Reitz. ἀσέβεια is the supreme offence, visited with storm, earthquake, famine and war: these punishments are enforced by δαίμονες: in *Ascl.* 28 sins which escape punishment in this life receive special punishment ■■■ the next.)

we find in Himerius²¹⁴: punishment by extremes of heat and cold is mentioned by Plutarch²¹⁵, punishment by racking winds in the *Asclepius*²¹⁶. The 'shadowy apparition at the tomb' (σκιοειδὲς σῶμα) comes from *Phaedo* 81 B, and rests on a popular Greek belief, rejected by Plotinus, but accepted by Porphyry and Iamblichus²¹⁷.

²¹⁷ Cf. Pausan. vi. 6. 7, F. Cumont, *Rev. ét. gr.* 1919, 115, H. A. Koch, *op. cit.* 20. Malefactors executed for their crimes were commonly supposed, as βαιοθάνατοι, to have a peculiar destiny hereafter, as in *Aen.* vi. 426 ff. They had not reached the τέλος θανάτου, cf. *Ascl.* 29, *uitam uiolenter amittunt ut non naturae animam debitam sed poenam pro meritis reddidisse uideantur*, and in general Norden, *Aen.* vi². 11 ff., 41 ff., Rohde, *Psyche*², II. 411 ff. In *P. Par.* 1885 ■ bone from the head of a βίαιος, probably equivalent to βαιοθάνατος, is used in a love-charm, as were commonly parts of ἄωροι, cf. R. Wünsch, *Aus einem griechischen Zauberpapyrus*, 17 ad l. 2577. In a Cyprian *defixio* published by L. Macdonald, *Proc. Soc. Bibl. Arch.*, Feb. 1891, the βαιοθάνατοι, ἄωροι and ἀποροι ταφῆς are invoked with the powers of the underworld (l. 31: cf. *P. S. Hartland, *Folklore*, XXI. (1910), 168 ff.).

It may further be recalled that ■ spear was carried in the funeral procession in honour of a man slain by violence, and then planted on his grave, which was watched for three days, no doubt because his spirit was feared and protection against it desired (Eitrem, *Opferritus*, 290₂). It was of course ■ very common belief that the dead man dwelt in his tomb, cf. P. Gardner *J. H. C.* v. 10-11

come the soul of an unreasonable being. Belief in a number of incarnations is forced ■■■ ■■ by the sight of congenital diseases of body or of soul, also by the difficulty of supposing that the soul, on leaving the body, remains idle for ever, or that there are innumerable souls: ■■ infinite number of souls is impossible in a world whose order is finite: ■■ also is the birth of new souls, ■■ that would be incompatible with the perfection of the universe.

This belief was widespread in antiquity. Sallustius, like Iamblichus, denied that the soul entered animals²¹⁸. Plotinus explained misfortunes as the appropriate results of sins in ■ previous incarnation²¹⁹. The argument that there cannot be an unlimited number of souls suggests the primitive belief in 'a fixed number of souls which preserve the tribe by their continual reincarnation²²⁰.' Here it is explained from Limit and the Unlimited, two of the oldest conceptions of Greek philosophy.

xxi. Souls that have lived virtuously are freed from the unreasonable element and purified from all body: ■ they have union with the gods and govern the whole universe with them. Still, if they attained none of these rewards, virtue itself and the glory it gives, and the life free from pain and from all other tyranny would suffice

²¹⁸ Cf. H. x. 19. On the other hand, Plotin., *Enn.* III. 4. 2, teaches plain transmigration into animals and plants for those who have deserved it (cf. *Kore Kosmou*, § 39 *ap.* Stob. 1. 49. 44, p. 397 W. = p. 478. 15 S., for the former). According to S. Augustine, *Ciu. D.* x. 30, Porphyry rejected this view. For the history of the word *μετεμψύχωσις* cf. L. and S., *ed. nou.*, ix., for the phrase *οἱ ἐλληχότες ἡμᾶς δαίμονες* cf. Freedom from the body and from unreasonable soul is the prize of virtue²²¹. The eschatological hope here held out meets us early in Orphic texts, but became very common²²²: in its present form it is what Iamblichus calls the older view as contrasted with the strict Platonic view, according to which the liberated souls contemplated the celestial order instead of sharing its government²²³.

For instances of deification in Greek epitaphs cf. Rohde, *Psyche*², II. 384 ff. (the term ἀποθέωσις is used of the death of a private person, Lebas-Waddington 1636, at Aphrodisias in Caria, ἀποθεοῦσθαι in Lydia, Keil-von Premetstein I., n. 183, p. 85, III., n. 57, p. 48. But we must not attach too much significance to the term, which became conventional: thus ἐκθέωσον is used ■ a simple euphemism for 'kill' in *P. Paris.* 2455, and ἀποθῶσον for ἀπαθέωσον in *P. The results of this analysis of the treatise may be tabulated thus:

| | | |
|-------|---|---|
| i. | Qualifications of learner. He must know <i>κοινὰ ἔννοια</i> : gods perfect, etc. | In all introductory treatises. κ. ε. used by various schools. Platonic commonplace ¹ . |
| ii. | functions of First Cause. | View common in fourth century A.D. |
| iii. | Myths make the mind work and mystically show forth nature, which likes concealment. Their strangeness is useful. | Hellenistic commonplace, so by Origen. So Julian. |
| iv. | Classification of myths. Story of Kronos. No Egyptian materialism. Story of Paris. Story of Attis. | So Julian. In rhetorical fashion. (The alle- gorisation is ■ Stoic common- place.) (Much criticised myth.) (Attacked by Christian writers.) (Much criticised myth.) Taken from Julian. |
| v. | Summary. Nature of First Cause. | Platonic. |
| vi. | Divine hierarchy. | Probably from Iamblichus ² . |
| vii. | Universe uncreated and immortal, etc. | Commonplace, as in Philo. |
| viii. | <i>Nous</i> perfects our souls. Some souls are mortal, some im- mortal. Rational element conflicts with irrational. | Iamblichus. Iamblichus. Commonplace. |
| ix. | Providence seen in the order of the universe, and in that of the human body. | Commonplace. |

| xxi. | The reward of virtue hereafter. The reward of virtue here. | Orphic, etc. Cynic: commonplace of Hellenistic philosophy. |

The conclusions to be drawn from these facts are fairly clear. Our author is an adherent of Neoplatonism in the form which Iamblichus gave to it. In his treatise ideas and (as we shall see) language taken thence are combined with traditional elements which had become common property. We can hardly hope to determine with precision the exact sources employed, except for the Attis-myth in iv. Whether Sallustius used Iamblichus directly or in some epitome, whether his knowledge is due mainly to written sources or to oral instruction, cannot now be said. It should be remarked that even in his following of Julian he shows originality.

The following points of verbal contact with Iamblichus may be noted³:

The term *συναφή*, of union between god and man, is used repeatedly by Sallustius⁴. Iamblichus is not the first to use it so, but he uses it with marked frequency, as also its synonym *ένωσις*⁵. Again, Sallustius pictures divine power as light in xiv., p. 26. 26, τῶν ἁμαρτημάτων θεοὺς μὲν ἡμῖν οὐκ ἐόντων ἐλλάμπειν, δαίμοσι δὲ κολαστικοῖς συναπτόντων. In the *De mysteriis* ἐλλάμπειν is almost a technical term. The divine light is treated as an objective illumination vouchsafed in visions⁶;

³ There is no reason to refuse the treatise *De mysteriis* to Iamblichus: K. Rasche, *De Iamblichio libri qui inscribitur de mysteriis auctore* (Diss. Münster, 1911) has made a convincing case for the attribution (cf. also W. Kroll, *P. W.* IX. 650, J. Geffcken, *Ausgang*, 283 f. in its defence).

⁴ xv., p. 28. 19, xvi., p. 28. 28; συναπτῶ, iv., p. 6. 26, xiv., 26. 23, xvi., 28. 29, xxi., 36. 13.

We find earlier in Porphyry, *De abstinentia*, II. 34, δεῖ ἄρα συναφθέντας καὶ ὁμοιωθέντας αὐτῷ τὴν αὐτῶν ἀναγωγὴν θυσίαν ἱερὰν προσάγειν τῷ θεῷ, in a spiritualised sense. For *ένωσις* cf. *C. H.* I. 6, 10, Plot. *Enn.* VI. 9. 9 (*ένωθῆναι*, of soul-union with God), Iamblich. *De myst.* I. 12, p. 41. 6, x. 7, p. 293. 3 (by sacrifice, v. 20, p. 228. 6, by prayer, 26, p. 238. 3). *Coniunctio* in [Apul.] *Ascl.* 7 might be a rendering of *συναφή* or of *ένωσις*.

Steph. *Thes.* III. 757 C), and earlier by Plut. *De genio Socratis* xx., p. 589 B. For divine light and fire cf. *De myst.* III. 6, p. 113. 7, τοῦ τῶν θεῶν πυρὸς καὶ φωτός, earlier *C. if the worshipper is fit⁷, he can receive it (*χωρεῖν*) and is filled with it (*πληροῦνται*⁸). Sallustius also speaks of this fitness in xv., p. 28. 10, ἡ μὲν πρόνοια τῶν θεῶν διατείνει πανταχοῦ, ἐπιτηδειότητος δὲ μόνον πρὸς ὑποδοχὴν δεῖται. Iamblichus also lays stress on such fitness, and on imitation of the gods⁹. This conception of divine light, no mere metaphor, is common in Gnostic and Hermetic texts and elsewhere¹⁰: still, its pre-

The Pythagorean Secundus, who flourished under Trajan, defines God (*Sent.* 3, in Mullach, *Fragmenta*, i. 512) as πολυώνυμος δύναμις, παγκρατὴς χεῖρ, φῶς, νοῦς, δύναμις (?). For the gift of divine light in visions cf. Iamblichus, *De myst.* iii. 2, p. 104. 3, 8, p. 117. 2.

For divine power conceived as a fluid cf. F. Preisigke, *Vom göttlichen Fluidum nach ägyptischer Anschauung* (*Schr. Pap. Inst.* Heidelberg, i., 1920).

⁹ Cf. *De myst.* i. 15, p. 48. 1, τὴν πρὸς αὐτὸ (*sc.* τὸ ἱκετευόμενον, the gods) ὁμοιότητα ἀπὸ τοῦ συνεχῶς αὐτῷ προσομιλεῖν κτώμεθα, τελειότητά τε θέλαν ἡρέμα προσλαμβάνομεν ἀπὸ τοῦ ἀτελοῦς, also i. 11, p. 37. 11, iii. 9, p. 119. 6, ὥστε μετέχειν αὐτῶν (*sc.* τῶν θεῶν) τὸ τὴν τυχοῦσαν ἔχον (*sc.* μέρος) πρὸς αὐτοὺς ὁμοιότητα. Iamblichus uses several times the phrase ἐπιτήδειος πρὸς ὑποδοχὴν as iii. 2, p. 105. 1, 11, p. 127. 8, v. 23, p. 232. 18, τὴν τελειότητα, ἑαυτῆς ἐπιτηδεύαν κέκτηται πρὸς θεῶν ὑποδοχὴν; ὑποδοχὴ τοῦ θεοῦ occurs also iii. 11, p. 125. 17, τῶν θεῶν v. 26, p. 238. 16, ἐπιτήδειος and ἐπιτηδειότης in this sense repeatedly in the *De mysteriis*. Earlier, in Porphyry, *Ep. ad Marcellam*, 19, we find παρασκευαστέον δὲ αὐτὸν (*sc.* τὸν νοῦν) καὶ κοσμητέον εἰς καταδοχὴν τοῦ θεοῦ ἐπιτήδειον.

¹⁰ Metaphors from light are common among Neoplatonists (Wendland, *Berl. Phil. Woch.*, 1899, 1411), and we have one in vii., p. 14. 3. But the use here discussed does not rest on metaphor alone; its basis is a definite belief, cf. G. P. Wetter, ΦΩΣ (*Skrifter utgifna af K. Humanistiska Vetenskaps-Samfundet i Uppsala*, xvii. i., 1915), *passim*. His view that the origin of the idea is to be sought in Oriental precursors of Manichaeism has been made very improbable by M. P. Nilsson, *G. G. A.* 1916, 41 ff. For the idea as exemplified by Plotinus and in Egyptian thought cf. Cumont, *Monuments Piot*, xxv. 89 ff. Light and life are commonly connected in ritual, cf. Dieterich, *Nekyia*, 241, L. R. Farnell, *Cults*, ii. 614 (symbolism of Eileithyia lifting torch), S. Eitrem, *Opferritus*, 155 ff. Light played a prominent part in the mysteries of Eleusis, cf. Plut. (?) *ap.* Stob. iv. 52 b, 49, p. 1089. 14. ΔΙΟΣ ΦΩΣ, the title of a torch-bearing Dionysus on a black-figured amphora illustrated by A. B. Cook, *Zeus*, ii. 273, fig. 177, may mean 'light of Zeus' and not 'man of Zeus': in Eurip. *Bacch.* 1082 f. the god manifests himself by a pillar of light and fire, cf. l. 597, and in [Arist.] *Mir. ausc.* 122, p. 842 a,

sence, ■ also the emphasis laid on *συναφή*, in Sallustius are most easily explained on the hypothesis that the latter was a follower of Iamblichus. Naturally, many ideas which may be traced to Iamblichus occur in Plotinus or in Porphyry; though Iamblichus modified Neoplatonism, he did not create it. Yet when we consider the views in which Sallustius agrees with Iamblichus against his Neoplatonic predecessors¹¹, and the linguistic points of contact, we shall probably be correct in assuming that Sallustius used one or more handbooks of commonplace philosophy and some work or works by Iamblichus or by ■ disciple of his¹². The explanation of the myth

■ he is said to display a blaze of fire in ■ sanctuary of his among the Bisaltae, when the harvest will be good. Such theophanies in or with fire are recorded of the Mother (Schol. Pind. *Pyth.* III. 137 b), of Gennaïos of Heliopolis (Damasc. *Vit. Isid. ap. Phot. Bibl.* 242, p. 348 a, 37 ff., cf. G. F. Hill, *J. H. S.* xxxi. 59), and of other deities (F. Pfister, *P. W. Suppl.* iv. 315); for a similar trait in Christian legends cf. M. R. James, *The Apocrypha of the New Testament*, 33, 46, 79.

¹¹ His explanation of the myth of Attis we have seen to be based on Julian, who used ideas of Iamblichus; it is quite different from that of Porphyry, recorded by Euseb. *Pr. evang.* III. 11. 12, and Julian says, p. 161 C, ἀκούω μὲν ἔγωγε καὶ Πορφυρίῳ τινὰ πεφιλοσοφῆσθαι περὶ αὐτῶν, οὐ μὲν οἶδά γε, οὐ γὰρ ἐνέτυχον, εἰ καὶ συνεχθῆναι πού συμβαίη τῷ λόγῳ. Sallustius agrees with Iamblichus against Plotinus and Porphyry in his view of Heimarmene (p. lxx. ff. *supra*), and against Porphyry in his view of sacrifice.

¹² R. Asmus, *Sitz. Ber. Ak. Heidelb.*, 1917, iii., *Philol.* LXXVI. 266 ff., LXXVII. 109 ff., regards a lost commentary by Iamblichus on the *First Alcibiades* as the basis of most of Julian's thought, and as influencing this treatise also (p. 86). Such ■ theory cannot well be proved, cf. Richtsteig, *Byz. neugr. Jahrb.* I. 413 ff. We have noted (p. xcvi. n. 1, 2) possible points of contact with the *Περὶ θεῶν* of Iamblichus, an extensive work, it would appear, of the type to which Sallustius refers when he says, vi. p. 10. 31 ἐν τοῖς περὶ τούτων λόγοις. The commonplace element in our treatise may of course be due in part to oral teaching. It should here be recalled that we have twice seen Sallustius taking what Iamblichus calls the view of the older authorities (p. lxxx., n. 181, xciv., n. 223). On the other hand, in his denial of the existence of objective evil and of evil daemones he seems to be in advance of Iamblichus, and perhaps follows some pupil of his (p. lxxviii. f. *supra*): E. Schröder, *Plotins Abhandlung*, 194, places him philosophically between Iamblichus and Proclus. Zeller's rejection of the view that he is of the school of Proclus (III. ii. 7931) has not been questioned. E. R. Dodds, *ap. G. G. A. Murray, Five Stages of Greek Religion*, 219, writes 'Many of his sections come straight from Plotinus: xiv. and xv. perhaps from Porphyry's *Letter to Marcella*, an invaluable document for the religious side of Neo-Platonism. A few things (prayer to the souls of the dead in iv., to the Cosmos in xvii., the doctrine of τύχη in ix.) are definitely un-Plotinian: probably concessions to popular opinion.' In the light of what has been said it will, I hope, be clear that in all probability Sallustius made no direct use of either Plotinus or Porphyry.

SOURCES AND AUTHORSHIP

of Attis he clearly took from Julian. It would be unsafe to assume that our author had read widely in philosophy; he may not have been familiar with the more esoteric writings of Iamblichus, and there is no reason to suppose that he had any acquaintance with the works of earlier Neoplatonists.

§ 2

In the Ambrosian manuscript the summary prefixed to the text is headed *Σαλουστίου φιλοσόφου κεφάλαια τοῦ βιβλίου*. Various Sal(l)ustii are known to us: among them is a fifth-century philosopher¹³. He, however, was a Cynic, not a Neoplatonist, and Zeller was no doubt right in rejecting the idea that he is the author of our treatise. Zeller urged that the treatise should be attributed to Julian's intimate friend, to whom he dedicated Oration IV, and on whose departure he wrote himself a consolation (VIII). This Salustius was a pagan of high education, who by wearing a beard acquired some right to the title of philosopher; Julian speaks of him as 'perfect in rhetoric and not unversed in philosophy,' and suggests that they should join in venerating Iamblichus the beloved of heaven¹⁴.

This hypothesis gained greatly in probability when Professor Cumont drew attention to the fact that the Attis-myth in iv. was directly copied from Julian's Fifth Oration. He

¹³ Cf. for him K. Praechter, *P. W.* 1 A, 1967 ff.

¹⁴ VIII., p. 252 B, IV., p. 157 D: from p. 157 C it would appear that Julian's friend had not read Iamblichus *Περὶ θεῶν*. The identity of this friend has been disputed. Seeck, *Die Briefe des Libanius (Texte und Untersuchungen, xxx.)*, 263 ff., *P. W.* 1 A, 2072. 42, makes him Saturninus Secundus Salustius (called *Σαλούστιος* in our Greek texts), who held office in Aquitania and in Africa before being Julian's assistant (*quaestor*, says Seeck) in Gaul, was made *praefectus praetorio Orientis* in 361, an office he held for some time under the new régime, refusing an offer of the Empire made to him after Julian's death, and died probably before 377, and not Flavius Sallustius, made *praefectus praetorio Galliarum* in 361 and consul in 363 (as Cumont, *Revue de philologie*, XVI. 52). Seeck's conclusions are probably right, but I am not competent to criticise them; the identification of our author is accepted in Lübker, *Reallexikon des klassischen Altertums*⁸, 906 a (8). The character of the treatise itself points to its writer not being a professed philosopher; E. Passamonti, *Rend. Acc. Lincei*, 1892, 727, seems greatly to exaggerate its philosophical importance. I retain the spelling Sallustius as being conventional.

argued further that the treatise was composed *circa* 363, in the service of Julian's reaction¹⁵. This date is probable, as is also the identification of the author with the Emperor's intimate friend. The tone of the work suggests that paganism has waned, but still possesses a not inconsiderable following; in the next chapter it will be urged that considerations of prose-rhythm certainly point to a date between 300 and 430 A.D.

Moreover, this statement of faith is so made as to parry the usual onslaughts of Christian polemic. As Julian strove to meet Christian care for the poor and for the dead by similar care, so Sallustius met theology with theology¹⁶. He asserted divine perfection as the Christians did (i.); like them he separated deity from matter (v.) and would not identify the gods with the planets and with the elements. Unedifying myths he handled with circumspection, not only pointing

¹⁵ *Rev. phil., l.c.* But we can hardly accept his conjecture that τῶν γραψάντων αἱ ψυχαί, iv. p. 10. 3, refers to the dead Julian (cf. p. lv., n. 77, *supra*: such language would indeed be appropriate, cf. Liban. *Ep.* 1210 F. = 1186 W., κάκεινψ, περὶ οὗ σὺ καλῶς δοξάζεις τοῦ τῶν θεῶν αὐτὸν γραφόμενος χοροῦ, *Orat.* xxx. 40, μέγας δέ ἐστιν ὁμῶς καὶ τεθνεῶς, but the supposed allusion is quite unnecessary), or his suggestion that the words ἐφ' οἷς ἡλαρεῖαι καὶ στέφανοι, referring to the Hilaria, could have been written under Julian or under Eugenius (392-4), but not at any other time after the official triumph of Christianity (but the festival may have been celebrated in a private way even when it was forbidden), or his contention that the statement in xviii., p. 32. 27, that ἀθεταί have arisen in certain parts of the world points to 363 rather than a later date. Strange as the remark that unbelief (meaning Christianity) has arisen in some places on the earth would seem to us in a writer of the fourth century, it is not impossible; Marinus in his *Life of Proclus* makes only casual allusions to its predominance (ch. 30, p. 24 Boissonade, ch. 29, p. 23, ch. 15, p. 12). A partisan can rise above facts and statistics. Cumont's date is, however, probably right.

It may perhaps be here suggested that much of the treatise had been written before the author read Julian's Fifth Oration, which Asmus dated March 27th, 362. In that case we might more easily understand the curious insertion in iv. of the Attis-myth derived thence; it has been remarked that this insertion is in the nature of an afterthought (p. li., n. 56 *supra*).

■ The *locus classicus* is *Ep.* 84 a (= 49 H.). Cf. Cumont, *l.c.* 54; more recently, *Studia Pontica*, III. 41 f., n. 27, he remarks on the construction of separate baths for men and for women at Phazemonitis σαοφροσύνης ἕνεκα σφῆς (l. 7) by one Jovinus, and suggests that he was the *magister equitum* of Julian, who certainly disapproved of public baths (cf. vi., p. 186 D, τὰ περιττὰ καὶ βδελυρὰ καὶ φαῦλα... λουτρὰ δημόσια καὶ χαμαιτυπεία καὶ καπηλεία). H. Grégoire, *Studia Pontica*, III. 88 f. n. 68 a, draws attention to a charitable foundation at Neoclaudio-polis, possibly belonging to this movement.

SOURCES AND AUTHORSHIP

to their possible meaning, but justifying their existence and rejecting dangerous materialistic interpretations (iii., iv.). On the question of Fate he took up a position which was secure from the polemic waged against astral determinism (ix.). Sacrifice he defended by an ingenious theory, image-worship he rejected by implication (xv.). His account of the origin of atheism is perhaps an answer to the Christian argument from facts¹⁷, and his proof that those who believe in an end of the world are atheists (xiii.) has an obvious controversial value.

This quiet implicit rejection of hostile views would suit the wise administrator who curbed Julian's fiery activity and whose calm acceptance of sorrow won the praise of Libanius¹⁸. It may be conjectured that this treatise was written before Julian's death and, when it was clear that his reaction could not survive its author, was not published, or, if published, had only a very small circulation: certainly it cannot have been regarded as in any sense an official manifesto¹⁹. No allusion

¹⁷ It would be hazardous to see in the closing words an implied criticism of the Christian promise of Heaven and threat of Hell (for such criticism cf. Geffcken, *Apol.*, 96).

¹⁸ Seeck, *ll. cc.*, gives full references. In *Ep.* 1224 F. (= 1143 Wolf) Libanius, who could show a similar spirit of moderation (as *Ep.* 819 F. = 730 W.), praises the πεπαιδευμένη ψυχή of Salu(s)tius. Whether this Salustius was the author of prose arguments to the plays of Sophocles (mentioned before one to *O. C.*, where Σαλουστίου ὑπόθεσις Πυθαγόρου may be an error for Σ. ὁ Πυθαγορείου, and before one to *Ant.*) we cannot say: cf. A. C. Pearson, *Fragments of Sophocles*, I. xxxiii., K. Praechter, *P. W.* 1A, 1964. Eminent pagans later showed a tendency to edit the Latin classics. Yet cf. against the identification A. Gudeman, *P. W.* 11 A, 661 f.

¹⁹ Had it been such, it would probably have perished with the anti-Christian polemic of Celsus, Porphyry, and Julian: it would at least have provoked some reply. The eloquent *Relatio pro ara Victoriae* of Symmachus called forth two rejoinders: yet Symmachus merely asked for toleration of the survivals of a dead faith, while Julian sought to make a serious revival, as is illustrated by certain inscriptions in his honour, as one in Numidia (Dessau 752), *restitutori libertatis et Ro[m]anae religionis*, which is comparable with Julian's words, *Ep.* 61 [= 42 H.], p. 72. 20, Bidez-Cumont, ἕως μὲν οὖν τούτου πολλὰ ἦν τὰ αἷτια τοῦ μὴ φοιτᾶν εἰς τὰ ἱερά, καὶ ὁ πανταχόθεν ἐπικρεμάμενος φόβος ἐδίδου συγγνώμην ἀποκρύπτεσθαι τὰς ἀληθεστάτας ὑπὲρ τῶν θεῶν δόξας, ἐπειδὴ δὲ ἡμῖν οἱ θεοὶ τὴν ἐλευθερίαν ἔδωσαν..., another at Beyrouth (Jalabert, *Mélanges de la faculté orientale...*, Beyrouth, II. 265, n. 62), *re]creatori [sacrorum et] extincto[ri superstitionis]*, and yet another at Mursa in lower Pannonia (Dessau 8946 = Diehl, *Inscr. lat. christ.* 11), *bono r(ei) p(ublicae) nato d(omino) n(ostro) Fl. the remark of Libanius, XXIV. 36 (ii. 530 Förster), οὗτος ὁ πολλῶν ἐξελάσας ἀχλὺν καὶ πάντων δ' ἄν, εἰ μὴ προαπῆλθε. It is tempting to see an anticipation of this plan in the legend *FEL(iciu)m TEMP(orum) REPARATIO* on the inverse of an *aureus* struck by Julian when Caesar and not yet Emperor; ■ specimen of the coin in the British Museum is reproduced on the cover of this book (another will be found illustrated in *Collection R. Jameson*, III. 176, n. 485, pl. XXIII.: the coin type is Cohen, no. 8, the seated figures Rome and Constantinople). Nevertheless, the legend was employed earlier by Constantine and Constans (to which fact Mr Mattingly kindly drew my attention), and Julian may well have attached ■ special meaning to it.

CHAPTER IV

STYLE AND FORM

§ 1. *Vocabulary and Grammar.*

In this connection the question we must ask about an author of the later Empire is: is he an Atticist? The term means little more than 'classicist,' and is used with reference to the past: Athens in the fourth century was the home of the modern style in oratory, Antioch of the ancient. Be this as it may, Atticism in words, word-forms and syntax is common in the so-called modern styles: the ornate Gregory Nazianzen is as fond of them as are the Attic Julian and Libanius¹. We find in Sallustius a number of Atticisms signalled as such by the grammarians²:

The use of the Infinitive with the article as a substantive, p. 2. 20, τὸ γε ζητεῖν and 22 other examples: for this in Julian cf. Boulenger, *Syntaxe de Jul.*, 194.

The Accusative of Respect, p. 2. 2, τὴν φύσιν ἀγαθοῦς, p. 36. 11, τὰ τε ἄλλα εὐδαιμονοῦσαι, cf. Boulenger, 48.

The Absolute Infinitive, p. 10. 11, ὥς δὲ ἐν βραχέσιν εἰπεῖν, cf. Boulenger, 120.

Also other Atticisms which are clearly such though not mentioned in our ancient authorities:

The use of the article and a neuter adjective as a substantive, p. 20. 20, μὴ τὸ φαινόμενον ἡδὺ ἀλλὰ τὸ μετὰ λόγου, p. 24. 27, τὸ φύσει ποιῶν, cf. Boulenger, 193.

The use of ὅσος for ὅς, p. 2. 5 ὅσας, cf. Schmid, IV. 611.

The use of the singular verb with a neuter plural: so more than 30 times (the MS. gives *contra*, p. 2. 11, γίνονται—εἰσίν, which in view of the context may clearly be removed by emendation, as may 26. 3 δύνανται). Cf. Boulenger, 37 f. (exceptions in Julian very doubtful).

¹ Cf. Norden, *Kunstprosa*, 349: Przychocki, 274 ff.: cf. for Athenagoras Geffcken, *Apol.*, 163, for Synesius Christ-Stählin, II. 1400₁₂. Galen, on the other hand, does not claim to be an Atticist (Christ-Schmid, II. 913 f.).

² Their *testimonia* are conveniently summarised by Schmid, IV. 633 ff., Przychocki, 276 ff.

ἐθέλω not θέλω, p. 10. 26, cf. Deferrari, *Lucian's Atticism: the Morphology of the Verb* (1916, Princeton), 10 f.

Some marks of the *koine* in Sallustius are not avoided even by the most scrupulous Atticists of the Empire: such are

The imperative plural middle in -έσθωσαν: p. 2. 10, γινέσθωσαν (this is the only form in Aelian; even Lucian relegates -σθων to the stiff Greek of ■ mock law³).

Ἀπόλλωνα for Ἀπόλλω: cf. Schmid, IV. 581, for its use in Atticists (though Cobet, *V. L.*², 263, regards such instances as in general due to copyists). It occurs p. 12. 19.

-ονα for -ω in the accusative of comparatives in -ων: -ω is much commoner in Atticists: p. 12. 25, κρείττονα (cf. Iambl. *De myst.* f. 13, p. 43, κρείττονα, III. 15, p. 136. 8, πλείονα).

ἡδυνήθη for ἐδυνήθη, p. 30. 19. This form like ἡβουλόμην is common from 300 B.C. onwards. Lucian usually has ἐδ-, ἐβ-.

A problem arises in connection with p. 30. 6, ἄν φθεροῦσιν. ἄν with the future indicative, participle, or infinitive is probably impossible in Attic: H. Richards, *Notes on Xenophon and others*, 277 ff., points out that in a number of cases not easily emended otherwise δῆ can be substituted for ἄν. There is evidence for ἄν with future infinitive and future participle in Lucian (Schmid, I. 245), with the former in Philostratus (Schmid, IV. 76, 90), with future indicative in Galen (J. Marquardt, *praef. ad Galen. Op. min.* I. xlv. f.). The MSS. appear to give ἄν ἐσομένης in Julian, V., p. 170 B (in defence of ἄν and the future participle, cf. A. B. Keith, *C. Q.* VI. 121 ff.). On the whole we may regard the ἄν in Sallustius, who writes in general with correctness, as probably intrusive. Richards, *op. cit.*, 282, has drawn attention to wanton insertions of ἄν in passages of other kinds in which it clearly cannot have stood in the original. Another point which may conveniently be discussed here occurs at p. 34. 28, where the MS. offers us οὐ γὰρ μήποτε λογικὴ ἀλόγου ψυχὴ γένοιτο. Attic use requires γένηται, as Prof. Muccio proposed to read. Of the optative, Stephanus, *Thesaurus* (ed. Paris.), V. 2346 D, gives examples. One of these comes from Synesius, three from Plotinus (though in one the subjunctive has some manuscript authority), and one from Libanius, which disappears when the passage is correctly punctuated (*Ep.* 1158 F. = 1115 W., ...ὥς σέ τι

λελυπηκὼς ἄκων, οὐ γὰρ δὴ ἐκὼν γε· μήποτε οὕτως ἀτυχήσαιμι, as Förster reads). It will also be observed that οὐ μή is correctly used with the subjunctive in papyri (cf. Moulton and Milligan, *Vocabulary of the Greek Testament*, 464 a) and in inscriptions of the Empire (as Ditt. *Syll.*³, 1042. 16 [second or third century A.D.], 1236, both texts written by unlearned men). If the idiom could survive in such circles, though the feeling for the exact use of moods was no doubt waning, as we see for instance in the use of subjunctive for optative in a wish, διαμείνῃ τὸ γένος τῶν Ῥωμαίων, Ditt. *O. G. I.* 653 [Amida in Armenia, third century A.D.], it is very likely that Sallustius, who had no doubt read some Plato and other Attic texts at school, would use it correctly, and we may therefore accept the emendation γένηται. (Mullach's proposal to read ἄν for μή postulates a less probable corruption.)

Questions of orthography are in later Greek far from easy:

³ Sallustius has -ττ- not -σσ-: p. 2. 9, κρείττον, 12. 25, κρείττονα, 14. 17, τάττει, 14. 31, ἡττηθείσα, 16. 13, τάττον, 4. 26, ἀνίττεται, 22. 4, πράττεται, 34. 22, ταραττόμεναι.

-σσ- occurs in Attic inscriptions of the fourth century B.C., but Lucian always has -ττ- except in verbs not so spelt in Attic⁴.

He also has συν-, not ξυν- in compounds without exception. συν- is invariably used by S. Gregory in his letters (Przychocki, 2950): Julian has συν- commonly (Boulenger, 52).

A decision on γιν-, γιγν- is difficult. The Ambrosianus gives us

γινέσθωσαν (1).

γίνομαι, etc. (7).

γινόμενος, etc. (11).

γίνεσθαι (1).

γινώσκω (1).

γίγνομαι, etc. (6).

γιγνόμενος (1).

The γιν- forms are popular: from 277 B.C. they alone are used in Ptolemaic papyri⁵. If we may trust the manuscripts, Aristides and Philostratus prefer γιγν-, Herodes Atticus and Aelian γιν-. (The pronunciation might be the same in either case.) It is natural to suppose that γιν- is a vulgarisation, and that accordingly, when our MS. tradition gives γιγν- in some cases, that form should be restored in all. It has however been observed that, though Lucian's text gives 116 examples of γίγνομαι and 63 of γίνομαι, 73 of the former examples occur in eight dialogues: this creates the impression that these latter have passed through an Atticising recension. Even so, there are 45 cases of γινώσκω to 13 of γιγνώσκω. It is therefore quite likely in Lucian, and, we may add, in Sallustius, that

⁴ Deferrari, 1 ff.

PROLEGOMENA · CHAPTER IV § ■

the γιν- forms are very often correct, and the γειν- forms due to alterations⁶: in the present edition the MS. is followed in each case, since it is impossible to determine whether the author's practice was consistent. Their spelling σῶζω has also been accepted: it is epigraphically attested for the first century B.C.⁷. The Attic forms πλέον (p. 28. 17) and οἶμαι (p. 28. 20) are used.

One more grammatical difficulty may for convenience be discussed here. In ix., p. 18. 24, we read τὸ δὲ καὶ πατέρων εὐγένειαν ἢ δυσγένειαν προλέγειν ὡς οὐ πάντα ποιούντων, τινὰ δὲ σημαινόντων μόνον τῶν ἀστρῶν διδάσκει (so Mullach for διδάσκειν). The sense required would be more clearly given by omitting διδάσκει and inserting ἐστὶ after ποιούντων. At the same time, the text as it stands is defensible, as an instance of the practice of using ὡς with ■ genitive participle followed by a verb which should naturally have the participle as its object. Examples which may be quoted are Soph. *Aj.* 281, ὡς ᾧδ' ἐχόντων τῶνδ' ἐπίστασθαί σε χρή, Aesch. *P.* V. 760, ὡς τοίνυν ὄντων τῶνδέ σοι μαθεῖν πάρα, Plato, *Meño*, 95 E, ἐν τούτοις μὲν ὡς διδακτοῦ οὔσης τῆς ἀρετῆς λέγει (cf. for further illustration of the point Goodwin, *Moods and Tenses* (1897), § 917 f., p. 365 f., Kühner-Gerth, II. 93 f.).

§ 2. *Particles and sentence-construction.*

The most frequent particle is δέ: this couples sentence after sentence in a mechanical way. An antithetic μὲν...δέ is used repeatedly: we find also καὶ...δέ ('yes, and'), p. 4. 8; 12. 16, 16. 20⁸; καὶ μέντοι καί⁹, p. 6. 11. οὐδὲ...οὐδέ occurs p. 2. 11/13/14 15/16, 16. 31: it seems to be indistinguishable from οὔτε... οὔτε, having lost its proper sense, *ne...quidem...neque*. Here Julian's practice sometimes agrees¹⁰. It may indeed be that our author wrote οὔτε...οὔτε, and that his text was vulgarised: at the same time it will be observed that μηδὲ...μηδέ occur in an acrostic epigram in a papyrus of the first century of our

■ I take these facts from R. J. Deferrari, *op. cit.* 36, with whose conclusions I agree. Such an introduction of old forms is not unparalleled. Our Renaissance Latin MSS., as the Datanus of Catullus, ■ full of old spellings or spellings thought to be such, which have been deliberately introduced into the text.

⁸ Classical (cf. Kühner-Gerth, II. 253) and very dear to Aelian (Schmid, III. 339).

⁹ Also in Dio of Prusa (Schmid, I. 186), Lucian (*ib.* 427), Aristides (II. 307), Aelian (III. 340: ■ favourite of his).

era (*P. Oxy.* 1795, col. ii., 1, μηδ' ἀδικῖν [= -εῖν] ζήτει μηδ' ἀν ἀδικῇ προσερίσης [= -ης]). Further, as Prof. Schmid has remarked, the correct use of particles declined under the Empire¹¹. The forms οὐδὲ...οὐδέ have therefore been left in the text.

Sallustius writes in balanced clauses, which are not however isosyllabic or isotonic, as p. 2. 1 ff.,

δεῖ μὲν ἐκ παίδων εὖ ἡχθαι καὶ μὴ ἀνοήτοις συντρέφεσθαι
δόξαις

δεῖ δὲ καὶ τὴν φύσιν ἀγαθοὺς εἶναι καὶ ἔμφρονας

δεῖ δὲ αὐτοὺς καὶ τὰς κοινὰς ἐννοίας εἰδέναι.

He is fond of short balanced cola as (p. 2. 13 f.)¹² οὐδὲ ἐκ σωμάτων εἰσι ~ οὐδὲ τόπῳ περιέχονται. But he is capable of more sustained sentences.

§ 3. Rhythm.

It was observed by Wendland that there are traces in the less technical chapters of Sallustius of an observance of the law of the accentual clausula as formulated by Prof. U. von Wilamowitz-Moellendorff for Himerius¹³. The law states that a period tends to close thus:

~ ~ ~ ~ ~,

less often

~ ~ ~ ~.

Prof. Norden rightly regards this as a preliminary stage of what we know as Wilhelm Meyer's law, which with some modifications is the norm of Byzantine fine writing¹³. It is

¹¹ I., p. 179 f.

¹² *Berl. Phil. Woch.* 1899, 1414; *Hermes*, xxxiv. 215 ff. Wilamowitz notes the use of this clausula also in the edict of Ampelius, Ditt. *Syll.*³ 905 [= *Syll.*² 423] and in Menander Rhetor, who is less regular in its use than Himerius. D. Serruys, *Philologie et Linguistique, Mélanges offerts à Louis Havet* (1909), 475 ff., on the basis of a minute study of Himerius, formulates a further law (p. 489): 'Devant un proparoxyton final le proparoxyton pénultième est exclus, à moins que le mot final ne porte l'accent sur le syllabe initiale' and finds (p. 492) that the last word is generally proparoxytone. (B. Keil ap. Reitzenstein, *Poimandres*, p. 371 ff. finds accentual rhythm in *C. H.* xviii., Norden, *Agnostos Theos*, 66, in the *Kore Kosmou*.)

¹³ Meyer's law (stated in *Der akzentuierte Satzschluss*, 1891 = *Gesammelte Abhandlungen*, II. 202 ff. and modified by P. Maas) is that between the last two accented syllables of a sentence there must be *two* or *four* unaccented syllables. This law is observed by Themistius (Christ-Schmid, II. 1013), S. Gregory of Nyssa, Synesius (P. Maas, *B. ph. W.* 1906, 776 f.: Syn. uses it, allowing 6 as well as 2 and 4, more regularly in his treatises than in his letters, except such

characteristic of Himerius, the modern (as opposed to Libanius the ancient), that he should substitute accent for quantity as the basis of the clausula¹⁴.

In Sallustius we have these specimens of $\sim \sim \sim \sim \sim$:
 μύθοις ἐχρήσαντο, θεῶν ἀγαθότητα, μύθοις εἰρήκασιν, γεννή-
 σασι μένουσιν, λέγεται ῥίπτεσθαι, οἶον ἐπάνοδος, ἴλεω γέ-

as are really speeches, as *Ep.* 57 Hercher: it will be remembered that Cicero in his letter to Lentulus, *Ad fam.* 1. 9, has oratorical clausulae), S. Gregory Nazianzen (in his letters: Przychocki, 340 ff.), the writer of the letters to Phalaris (Wilamowitz, *Textgeschichte d. gr. Lyr.* 352, *Abh. Ges. Wiss. Götting.*, N. F. iv. 3, 1900), Procopius of Gaza (he has usually ■ or 4 unaccented syllables in the gap, seldom 3, but he does not eschew the juxtaposition of accented syllables [P. Maas, *Byz. Zeit.* XXI. 52 f.]: he is less rigorous in a technical work, as in his Commentary on *Genesis* [Würthle, *Rhet. Stud.* vi. 94]), Nestorius (P. Maas, *Byz. Zeit.* XXI. 52 f.), Agathias (who however often allows 5; Franke, *Bresl. phil. Abh.* XLVII. 67 ff.), and, to give a late example, by Konstantinos Manasses (P. Maas, *Byz. Zeit.* XI. 505 ff.).

¹⁴ Cf. Norden, p. 428, Wilamowitz, *Hermes*, *l.c.* Libanius does not observe Meyer's law (Christ-Schmid, II. 999): he uses quantitative rhythm (cf. Münscher, *Bursian*, 170 (1915), 147 ff., for ■ summary of Heilmann's dissertation on this subject, and of other recent studies).

interval of *one* 14 times, an interval of *five* twice, of *seven* once, of *nine* once; no interval ■ times¹⁶.

On a rough calculation accentual clausulae conforming to the type occur three times in four. It must not however be supposed that accent superseded quantity completely and at once¹⁶. The poet Nonnus took into account both accent and quantity: in prose Archbishop Proclus serves as ■ type of the transition¹⁷. The chief rhythms of post-Demosthenic prose are according to Norden ■

- (1) - ∪ - - ∷,
, (2) - ∪ - ∷ ∪ -,
(3) - ∪ - ∪,

with various other resolutions¹⁸. The prevalent types may be labelled cretic and trochee, double cretic, ditrochaeus. In the first eight chapters of Sallustius we have as examples of - ∪ - - ∷ or its resolutions: *μύθοις ἐχρήσαντο, θεῶν θεωροῦν-
τες, ἐναντία ψυχῇ, σωμάτων εἰσι, δρωμένων καιρός, ἐστὶν
ἀνθρώπων, ἀναγομέναις ψυχαῖς, ἐστὶ τῶν ψυχῶν* (Χάριτας
δ' ἐν Ἀφροδίτῃ, p. 12. 16 if δέ is elided, which is doubtful: the
MS. gives hiatus), *τὴν γένεσιν εἶναι, ἤδη προεῖρηται, ἀθάνατον
οἶδεν* (11 clear cases); of - ∪ - - ∪ ∷: *τοιοῖδε γινέσθωσαν, οὐδέ-
ποτε γίνεται, δυναμένοις εἰδέναι, αἰνίττεται τοῦ θεοῦ, μῆλον
εἶναί φησι, λοιποῦ μεθ' αὐτῆς ἔχειν, συνάπτεται τοῖς θεοῖς,*

■ These statistics make no claim to an exactitude which could only be illusory, for several reasons. Firstly, it is extremely hard to determine the fourth-century accentuation of a word, and these calculations are based on the accents in ordinary use. Secondly, uncertainty must exist as to the nature of the break in sense at which a clausula may be expected. Thirdly, we do not know exactly where elision was practised: H. B. Dewing's valuable article, *A. J. P.* xxxii. (1911), 188 ff., esp. 201, shows that hiatus was often allowed where, in earlier times, elision would have been normal. Still, they indicate clearly the tendency of the prose writing of Sallustius.

¹⁶ S. Aug., *De doct. chr.* iv. 10 (xxxiv. 99 Migne), quoted by G. Reynolds, *The Clausulae in the De civitate dei of S. Augustine*, p. 6, bears witness to the decline of sensitiveness thereto in Latin.

■ ¹⁷ Norden, *Kunstprosa*, 922 f.

¹⁸ *Kunstprosa*, 924: for their later ■■ cf. A. Boulanger, *Aelius Aristide* (1923), 434. For this purpose it is of no importance whether - ∪ - ∪ - ∪ - should be explained as cretic + paeonic rather than ■■ double cretic with resolution. It is certainly ■ traditional quantitative form.

Forms (1) and (3) are characteristic of Chariton, [Herod.] *Περὶ πολιτείας* (cf. Heibger, *De clausulis Charitoneis*, Diss. Münster, 1911; *ib.* 99, it is noted that [Herod.] has a preponderance of heavy endings), and Galen (Ritzenfeld, *B. ph. W.* 1907, 540 ff.).

ὥσπερ ἀναγεννωμένων, γίνεται τῆς νυκτός, εἰσιν ἐγκόσμιοι (10 cases); of - ∪ - ∪: οὐδὲν πέφυκεν (1 case). Even in these chapters such types as - ∪ ∪ - ∪, - ∪ - ∪ -, - - - ∪ ∪ occur in addition to the orthodox clausulae, and there is ■ marked tendency to purely spondaic closes. After the end of vii. quantitative rhythm seems to disappear in the complexity of the argument: it appears fitfully, as in ix., ἐπ' ἀγαθῷ γίνεται (∪ ∪ - - ∪ -), ἕκαστον ἄνθρωπον, in x., ψυχῆς δέονται, in xi., πολιτεία καλεῖται, xii., πάντα ποιούντων, φαίνεται τὰ κακά (- ∪ - ∪ ∪), ἀμαρτημάτων καθαίρουσι, xiii., ἀρκέσει ταῦτα, κατὰ δύναμιν γίγνεται, xiv., κολαστικοῖς συναπτόντων, xv., ὑποδοχὴν δέεται (∪ ∪ - - -), xvi., -ων ἀπάρχεσθαι, -ων ἀπαρχόμεθα, even in xvii., where the dialectic is fiercest, xviii., γίνεται ταῦτα, τῶν θεῶν ἐκπεσεῖν, xix., οὐκ ἂν εἶχοι, xxi., καὶ δυνηθεῖσιν. Type (1) predominates.

In any case Sallustius is no observer of law in this matter: he ends with ἔστιν ἰδεῖν when ἰδεῖν ἔστιν would restore the cretic base¹⁹. But his instinct for quantity causes certain rhythms to recur.

Clearly he belongs to the transitional period. That he shows clear clausula-rhythm agrees with his express purpose of writing an exoteric work²⁰: the clausula is in truth the touchstone of prose rhythm²¹.

¹⁹ p. 6. 11, ἄλλοις ἰδεῖν ἔστιν would give - ∪ - | - ∪.

■ Clausula-rhythm rests in the first instance on ■ preference for and natural tendency to ■■ certain types of ending; this unconscious tendency is well exemplified by the fact, noted by Ritzenfeld, *B. ph. W.* 1907, 540 ff., that Galen has the same proportion of good *clausulae* in his popular *Protrepticus* and in his technical *Περὶ μυῶν ἀνατομῆς*: the only natural explanation of this is that the rhythm was natural to him. Still, it became ■■ ornament deliberately used. S. Augustine says, *De doctrina Christiana*, iv. 20. 41 (xxxiv. 109 Migne), *sicut in meo eloquio, quantum modeste fieri arbitror, non praetermitto istos numeros clausularum* (cf. *ib.* 26. 56, p. 117 Migne): on ■■ occasion he apologises for failing to add clausulae to a work, pleading shortness of time (G. Ammon, *Phil. Woch.* 1922, 1069 f.). We have MSS. of Plutarch in which the order of words has been changed to secure accentual closes (Pohlenz, *G. G. N.* 1913, 338 ff., De Groot, *Handbook of antique prose rhythm*, I. 139).

Such ornament would most naturally be omitted in an esoteric treatise, cf. p. cx., n. 13 *supra*: in Procl. *In Rep.* II., p. 1-4. 9 Kroll (a specimen taken at random) there is no clear trace of cretic-trochaic clausulae, and if we seek accentual closes we find intervals of 2 unaccented syllables 12 times, of 4, 7 times, but also of 1 syllable 3 times, of 3, 7 times, of 5 twice: the final word is 7 times proparoxytone (that is, half the clausulae are accentually irregular).

■ The rhythm of the clausulae ■■■■ in the rest of the sentence, but its existence therein is harder to seize and to define.

§ 4. *Hiatus.*

The literary movement conveniently called the Second Sophistic did not show an Isocratean zeal in the avoidance of hiatus. In the third century, however, Longinus forbade hiatus, and in the fourth century Themistius eschews it in his speeches, though not in his diatribes, while Libanius is fairly strict. S. Gregory Nazianzenus avoids hiatus in his funeral orations and also in his letters. Certain instances noted in the latter would not have been countenanced by the strictest authorities: such are those after *-ā -ει -η -ι -οι -ου -υ -ω* (yet the MS. authority is in some cases uncertain). Later the school of Gaza was strict in avoiding hiatus²².

Sallustius is no purist. Apart from minor examples, as *ἀκοῦσαι ἐθέλοντας, κακύνεται εἰ*²³, or such as are defended by a pause, as *ἀσώματοι, οὐδέ*, or again *χαίρει, ἀνομοιότητα*, we have also *ὅτι ἀμετάβλητος, ἄνθρωποι ὀρθῶς, οὐσίαι οὐδέ, νοῦ αἰ, ζῶου αἰ, θεῖοι οἰ, ὅτι ὥσπερ, ποταμῷ ἐρασθῆναι, τροφή ὥσπερ* in the first four chapters²⁴.

²² Cf. for references Lübker, *Reallexikon*⁸, 464 b, s.v. Hiat, also for Longinus Christ-Schmid, II. 891, for Themistius, *ib.* 1012, for Libanius, *ib.* 999, for S. Gregory, Przychocki, 297 f., and in general H. B. Dewing's paper, quoted p. cxi, n. 15 *supra*. A. Boulanger, *Aelius Aristide*, 428, notes that Aristides allows hiatus, but nevertheless employs certain traditional devices (as crasis, elision, choice of synonyms) to avoid it.

X. Hirth, *Diss. phil. Arg.* XII. i., 149 ff., and Przychocki, 299 ff. enumerate devices for the avoidance of hiatus, as the use of *ἐνεκεν, μέχρις* [-ι alone commended by Atticists], *οὕτω(s), ὅσπερ, ὅπερ* for *ὅς, ὅ*.

■ This *-αι* counts as short: cf. Przychocki, 306.

²⁴ Julian however, though he could bear *μεθίσθαι, ἄτε*, p. 120 A, *δὴ οὖν*, p. 138 D, *σοι ἄξιον*, p. 223 C, is sensitive and avoids hiatus (for this purpose he uses *ἐνεκεν* for *ἐνεκα*); cf. Ammon's review of Klimek's study, *Phil. Woch.* 1920, 193 ff. Technical writers have no respect for these minutiae: cf. [Iambl.] *Theol. Arithm.* 43 ff., p. 58. 2, *πρωτογόνου ἐνός*, l. 20, *μονάδι ἀσχίστῳ*, p. 59. 1, *συντυγχάνει ἐν*, p. 60. 9, *βραχὺ ὑποβεβηκώς*, *τρίτῃ ἐτι ἐλάσσων*, l. 12, *αὐ ἀπό, ὀγδόῃ ἰσως*, l. 16, *ἡ τρίτῃ ἐβδομῇ*, Iambl. *De myst.* II. 3, p. 71. 4, *οὔτοι εἶναι οἰ*, II. 2, p. 70. 2, *δεῖ ἀμφισβητεῖν*, 70. 6, *δυνηθείη ἀψεύστως*, Procl. *ad R. P.* II., p. 82. 27, *ὑλῆ δν*.

§ 5. *Figures of speech.*

Sallustius writes in a plain manner. He uses *antithesis* freely, *chiasmus* twice²⁵, rhetorical questions repeatedly²⁶; he is fond of parentheses²⁷.

His style has the merit of being unostentatious: at the same time, its brevity makes it sometimes obscure, as for instance in ix.

§ 6. *Plan and form.*

The tractate falls into two clearly defined halves: the first is ■ general exposition of the subject (i.—xiii. ἀρκέσει ταῦτα), the second consists of a series of appendices on disputed questions²⁸. Even so the arrangement is clumsy: vii., xiii., xvii. are concerned with the same subject, and the insertion of the Attis myth in iv. is awkward. From these indications and from the lack of an opening it may be conjectured that the work is unfinished²⁹. Praechter argues from p. 24. 16, περὶ δὲ τοῦ μὴ γένεσθαι ταῦτα μηδὲ ἀλλήλων χωρίζεσθαι λείπεται λέγειν, ἐπειδὴ καὶ ἡμεῖς ἐν τοῖς () λόγοις ὑπὸ τῶν πρώτων τὰ δεύτερα εἵπομεν γενέσθαι, from the inadequate reference to Nous (p. 14. 19), and from the phrase ἐν τοῖς περὶ τούτων λόγοις (p. 10. 31), that the author occupied himself with making excerpts from a larger treatise: the first passage he regards as due to the inadvertent copying of ■ cross reference in the original to something not reproduced in the shorter

work³⁰. The actual phrase does not indeed occur earlier; but it is perhaps possible to regard it ■ referring to the creation of the ἐγκόσμιοι θεοί by the ὑπερκόσμιοι (in vi., p. 10. 30 f.). The gods are expressly included in creation (ταῦτα in l. 16 refers to θεῶν καὶ κόσμου καὶ τῶν ἀνθρωπίνων πραγμάτων in l. 13 f., and below, p. 26. 7, we read μεγίστης δὲ δυνάμεως οὔσης οὐκ ἀνθρώπους ἔδει καὶ ζῶα μόνα ποιεῖν ἀλλὰ θεούς τε καὶ † ἀνθρώπους καὶ δαίμονας), and by referring the phrase to them we understand μηδὲ ἀλλήλων χωρίζεσθαι (compare p. 2. ■ 5 ff. *supra*, αἱ τῶν θεῶν οὐσίαι...οὐδὲ τῆς πρώτης αἰτίας ἢ ἀλλήλων χωρίζονται). As for ἐν τοῖς περὶ τούτων λόγοις, it is a plain reference to treatises such as the more elaborate works of Iamblichus (as the *Περὶ θεῶν*)³¹ or similar philosophers³².

The literary form to which this work would appear to belong is the *isagoge*. This type of introductory treatise with its fixed features (dedicatory introduction to son or to other young man, demand of suitable preliminary qualifications in the learner, sketch of the history of the art, division of the body of the work into two parts, one concerned with the *ars*, one with the *artifex*) is known to us from a number of examples collected by Norden, who has put the *Ars Poetica* in this category³². Sallustius gives us the *artifex* in i., passes to the *ars* in ii. (cf. esp. p. 2. 9 f.); iii. gives the historical section. But the resemblance should not be pressed.

³⁰ P. W. 1 A, 1963.

³¹ So in Hermetic treatises we read x. 1, τῶν γενικῶν λόγων των πρὸς αὐτὸν ἐκλελαλημένων ἐστὶν ἐπιτομή...ἀλλαχοῦ δὲ...ἐδιδάξαμεν, xii. 5, λόγος δὲ ἐμπροσθέν μοι διεξελέλυθας (so Scott reads), xiii. 1, ἐν τοῖς γενικοῖς, *Exc.* vi., p. 410. 14 Scott (*ap.* Stob. i. 21. 9, p. 189 W.), ἐν τοῖς ἐμπροσθεν γενικοῖς λόγοις ὑπέσχου, although the *Corpus* did not exist as a collected whole (cf. *J. Eg. Arch.* xi. 132). A close parallel to the phrase of Sallustius occurs in Julian iv. (dedicated to ■ S. who is probably our writer), p. 157 C, τελειότεροις δ' εἰ βούλει περὶ τῶν αὐτῶν καὶ μυστικωτέροις λόγοις ἐπιστῆσαι, ἐντυχὼν τοῖς παρὰ τοῦ θείου γενομένοις Ἰαμβλίχου περὶ τῶν αὐτῶν τούτων συγγράμμασι τὸ τέλος ἐκείσε τῆς ἀνθρωπίνης εὐρήσεως σοφίας.

³² *Hermes*, xl. (1905) 481 ff., cf. Barwick, *ib.* lvii. (1922) 1 ff. The *isagoge* of Albinus as we have it lacks the introductory section, just as does our treatise. It is possible that some remarks which originally stood at the beginning have been lost; it is tempting to suggest that Sallustius may have intended to dedicate the work to Julian, and on the latter's death did not write the dedication or suppressed it if he had written one.

CHAPTER V

THE TRANSMISSION OF THE TEXT

§ 1. *Manuscripts.*

Ambrosianus B 99 *sup.* (n. 121 in Martini-Bassi, *Cat. Codd. gr. Bibl. Ambr.* I. 130 f.) is a volume composed of three parts. The first (*folia* 1–6) contains the close of the *Homeric Allegories* of Heraclitus, then a table of contents for this text and the text itself, all in a hand attributed to the thirteenth century (though it is difficult to feel any confidence that it does not belong to the fourteenth), followed by some verses of Tzetzes written in a hand probably of the fourteenth century. The second includes Moschus Siculus, *Europa*, two notes beginning *ιστέον ὅτι ἐγκύκλιον παιδείαν*, and the *Axe* of Simmias, the *Altar* of Dosiades, and the *Syrinx* of Theocritus with scholia, in various hands attributed to the thirteenth and fourteenth centuries. The third is a fourteenth century *Odyssey* with scholia.

Barberinianus I. 84 (now in the Vatican, written and possessed by Constantius Patricius, a humanist of the latter half of the sixteenth century) contains a number of philosophic opuscula in a small neat Renaissance hand: Sallustius occupies *folia* 41–54.

Ambrosianus O 123, of the sixteenth century, contains on *folia* 59–66 Sallustius in 38 chapters, commencing at *ζῶον αἰσθήσεις* (p. 2. 17), and thereafter Moschus *Europa*, the note *ιστέον ὅτι...*, Simmias and Dosiades, just as the accident of binding has combined them in Ambrosianus B 99. This part of the manuscript was written by Manuel Morus of Crete (Martini-Bassi, *Catalogus Codicum*, II. 693: they number it as 598).

It can hardly be doubted that G. Muccio, who first drew attention to Ambrosianus B 99, and to whom is due further the credit of determining its reading in certain places where the writing has become very faint, was right in maintaining that it was the parent of the Barberini text: it cannot be asserted with confidence that the copying was direct. The text of Manuel Morus is obviously a copy of B 99: that it should contain the same combination of Sallustius and other writings can hardly be accidental, and a brief examination showed me that the copying was very close. Both Ambrosian MSS. belonged to Pinelli¹. On Ambrosianus B 99 alone depends our knowledge of what Sallustius wrote: it may be added that its witness is honest if defective²: all its readings (apart, for instance, from its omissions of *iota subscriptum* and its spelling of *ὕλητα* as *ὕρεία*) are given in the *apparatus*; some of them were published by Muccio: the record here given is based on a collation of the manuscript made by me in March 1923, and on a rotograph.

§ 2. *The tradition.*

In the Ambrosian MS. Sallustius was preceded by Heraclitus. The short fragment of the latter is older than any extant MS. of the earlier part of his work, and it has been shown that the book from which these six leaves were detached was the parent of all MSS. of Heraclitus except Vaticanus 305, which is descended from a kindred text, and the New College MS. (n. 298), which has peculiar readings: Vaticanus 871 ends in the middle of the page at the exact point at which Ambr. begins, and may very plausibly be regarded

¹ *Studi italiani*, III. 8 ff. The confusion of the title in the Barberini MS., its false expansions of compendia in Ambr., its reproduction of one which proved incomprehensible, are decisive. I give its readings in ■ Appendix for completeness, from my own collation corrected by the aid of one which Prof. Cumont kindly gave me. The lost *codex Saregicus*, known to us from De Rycke's description, had the same error as Barb. in its title, and similar contents (in part identical), and may have been an intermediary stage in the tradition. That O 123 is a copy of B 99 was seen by H. Schrader, *Hermes*, XXII. 339.

² Muccio's suspicions of widespread interpolation, expressed in *Studi italiani*, VII. 45 ff. (as that xiii., xvii. are later additions); were rightly rejected by P. Wendland, *B. ph. W.* 1899, 1409 ff.: xvii. ■ earlier suspected by Passamonti.

as descended from the other half of Ambrosianus B 99 after it had suffered injury³.

Vaticanus 305 contains further Porphyry *Quaestiones Homericae* and *De antro nympharum*, and [Heraclitus] *De incredibilibus*. As there is other evidence for this connection of Porphyry and Heraclitus it is by no means improbable that the archetype of these MSS. contained some Porphyry, Heraclitus, Sallustius, and the pseudo-Heraclitea⁴.

Such gatherings of kindred matter came into being when the parchment book superseded the papyrus roll, that is, in and after the fourth century of our era. Photius in the ninth century mentions a volume (*cod.* 186) containing Conon and Apollodorus, another (*cod.* 189) in which the paradoxographical works of Sotion and of Nicolaus preceded the local mythology of Acestorides, and various theological collections⁵. We have ■ geographical corpus containing Marcianus, Menippus (abridged), Scylax, Dionysius, Scymnus, excerpts from Heraclides Criticus and from Strabo, the *Mansiones Parthicae* of Isidore, and possibly four other peripli: this appears in varying degrees of completeness in a number of manuscripts⁶. A combination of Agathemerus and two Anonymi is preserved in eleven copies⁷. *Cod.* Heidelb. 398 contains a small collection of Paradoxographi side by side with geographical texts⁸, and we have various rhetorical corpora⁹.

Many of such productions may be due to that revival of learning which began in the ninth century in the East, at the

■ Oelmann, *Proleg. ad Heraclit. Alleg. Hom. ed. Soc. Phil. Bonn.*, xi ff. A. Brinkmann, *Rh. M.* LXII. 614 ff., has since drawn attention to the mutilated Heraclitus in Monacensis gr. 487, a descendant and (he argues) a direct copy of *Ambr.* before its injury. Here, as in Vat. 871 and B. M. 16 C xvii., Harpocration comes before Heraclitus: in Vat. 871 Horapollon is placed between the two, in Escor. Σ-I-20 he follows Heraclitus. It is hard to see why Harpocration and Horapollon should have been conjoined with Heraclitus and Sallustius, but we must allow for chances of binding.

⁴ Probably attached to the collection by the accident of name, as Reinhardt^{*} suggests, *P. W.* VIII. 510.

⁵ Others of his codices contained ■ medley of theological matter.

very time when the Carolingian renaissance began in the West. Among its activities was the compilation of convenient bodies of excerpts, such as those which pass under the name of Constantine Porphyrogenetos.

The additional evidence for the association of Heraclitus and Porphyry in the MS. tradition is afforded by the Scholia on the Iliad¹⁰. Those in Venetus A quote Porphyry seldom, and in an abridged form: those in Ven. B (and its brothers, Townleiensis, Escorialenses Ω and ■ I. 1) quote Porphyry more frequently, and Heraclitus once (on v. 392). The second hand in B (thirteenth century) adds copiously from Porphyry and from Heraclitus¹¹. It is likely that he used a longer form of the scholia copied in a shorter form by the first hand and by the scribes of the kindred texts: similar was the MS. which Eustathius must have used¹², and similar the source from which Leidensis Vossianus 64 (fifteenth century) drew Porphyriana and Heraclitea, in some cases fuller than those of B²¹³. These facts support the idea that a combination of matter from Porphyry and Heraclitus had found its way into Scholia: it may fairly be regarded as more probable that the scribe of B² used other scholia to amplify his own than that he read Heraclitus. Naturally certainty in these matters is not to be attained. Now in the Leidensis two quotations from Heraclitus are given under the name of Porphyry¹⁴: so also the

¹⁰ In their present form they represent the addition of notes from ὑπομνήματα to texts with brief marginal notes, like our papyri of Pindar's Paeans and of the *Ichneutae* (cf. J. W. White, *The Scholia on the Aves of Aristophanes*, liv. ff.: further examples are *P. Oxy.* 1234, 1360 [Alcaeus], 1361 [Bacchylides], 1790 [Ibycus]). For Homer we have good specimens of the ὑπόμνημα in *P. Oxy.* 221, 1086, and 1087.

¹¹ For this supposition of the existence of a longer form and of a shorter ■ may compare the Scholia of Aristophanes: the eleventh-century Ravennas follows the latter, the twelfth-century Venetus the former (J. W. White, *op. cit.*, p. lxxi. ff.). B and B² can hardly have used the *same* original, as A. Gudeman seems to suggest (*P. W.* II. A, 634. 49): the agreement of B and T points clearly to the existence of some lost common ancestor giving the shorter form. That the longer form and the shorter form belong to the same tradition is fairly clear: B² continues notes of B after a ~ to indicate the transition (Hiller, *Fleck. Jahrb.* xcvi. [1868], 802).

¹² Cf. Cohn, *P. W.* vi. 1460 ff.: it contained also critical information such as is given in Ven. A.

¹³ Cf. Schrader, *Hermes*, xx. 380 ff.

¹⁴ Oelmann, *op. cit.* xxiv.

THE TRANSMISSION OF THE TEXT

Scholia on Od. XXII. 233 given in Cod. Vindob. phil. gr. 133 quotes three lines of Heraclitus as by Porphyry¹⁵.

Porphyry and Heraclitus were then both used in Scholia prior to Eustathius (twelfth century) and to B², prior, also, if our conjecture is correct, to the parent of B τ Esc v l. 1; as the last is dated 10th–11th century such Scholia could not well be later than *circa* 900. If the confusion of Porphyry and Heraclitus in Leidensis Vossianus also goes back to this source and is not purely accidental, it shows how closely the two were associated and would suit, though not prove, the theory that a small allegorical corpus containing them was formed in the ninth century. That Sallustius was even then associated with them is not unlikely: yet we can hardly look for extensive traces of his use, since he does not treat Homer's subject-matter apart from the Judgment of Paris, which is mentioned in passing in *Il.* XXIV. 29 f. However, when Eustathius says ἥς (*sc.* τῆς βασιλείας) αἰνιγμα καὶ ὁ Ζεὺς εἰς νοῦν ποτε μεταλαμβάνομενος, ἔτι δὲ καὶ ὁ τοῦ Διὸς πατὴρ Κρόνος, εἰς νοῦν οὐ τὸν ἀπλῶς ἀλλὰ τὸν καθαρὸν ἀλληγορούμενος, ὥς οἶά τις κόρος νοῦς, ὁ καὶ ἀγκυλομήτης διὰ τὸ κατ' αὐτὸν ἀγκύλον καὶ συνεστραμμένον. οὐ γὰρ ἔξω πλανᾶται που ὁ τοιοῦτος νοῦς ἀλλ' εἰς ἑαυτὸν ἔστραπται, καὶ μάλισθ' ὅτε νοεῖν ἐθέλει ἑαυτόν, he does in the last words perhaps use Sallustius iv., p. 4. 25, ἐπειδὴ νοερὸς ἢ θεός, πᾶς δὲ νοῦς εἰς ἑαυτὸν ἐπιστρέφει, τὴν οὐσίαν ὁ μῦθος αἰνίττεται τοῦ θεοῦ¹⁶.

■ Oelmann, xxv.

■ *ad Il.* II. 207, p. 203. 20. Κρόνος—Χρόνος and Κρόνος—κορόνους are commonplace: yet this point is not. (Eustathius is certainly *not* using Demo: we have her note *ad loc.* in the Scholia.) Another possible trace of the influence of Sallustius occurs in the Ἀλληγορία ἀναγωγική which Joannes Diaconus Galenus wrote on *Il.* IV. 1–4 (Flach, *Glossen und Scholien zur hesiodeischen Theogonie*, 423): it is there stated that myths may be allegorised φυσικῶς, ἠθικῶς, θεολογικῶς: this omits ὑλικῶς, but that fashion was not approved by our author (p. 6, 2). This differs from the schemes of Aphthonius (cf. p. xlv, n. 35) and of Eustathius, *Proem.* in *Il.*, p. 3. The *Anonymus* printed by Westermann in his *Scriptores poeticae historiae graeci*, 327, gives ἡ πραγματικῶς (= on Euhemerist lines, cf. Flach, 132), ἡ ψυχικῶς ἡ στοιχειακῶς: this lacks the characteristic θεολογικῶς and resembles much Tzetz. *ad Hes. Op. et Di.* I., p. 36. 1 Gaisford. We cannot however well expect evidence of much reading of Sallustius at Byzantium: it is clear from the allegorisation of the myth of Kronos by Psellus (published by C. Sathas, *Annuaire de l'Association pour l'encouragement des études grecques*, IX. (1875), 219 ff.) that Psellus was not acquainted with the treatment of that theme in ch. iv. of our text.

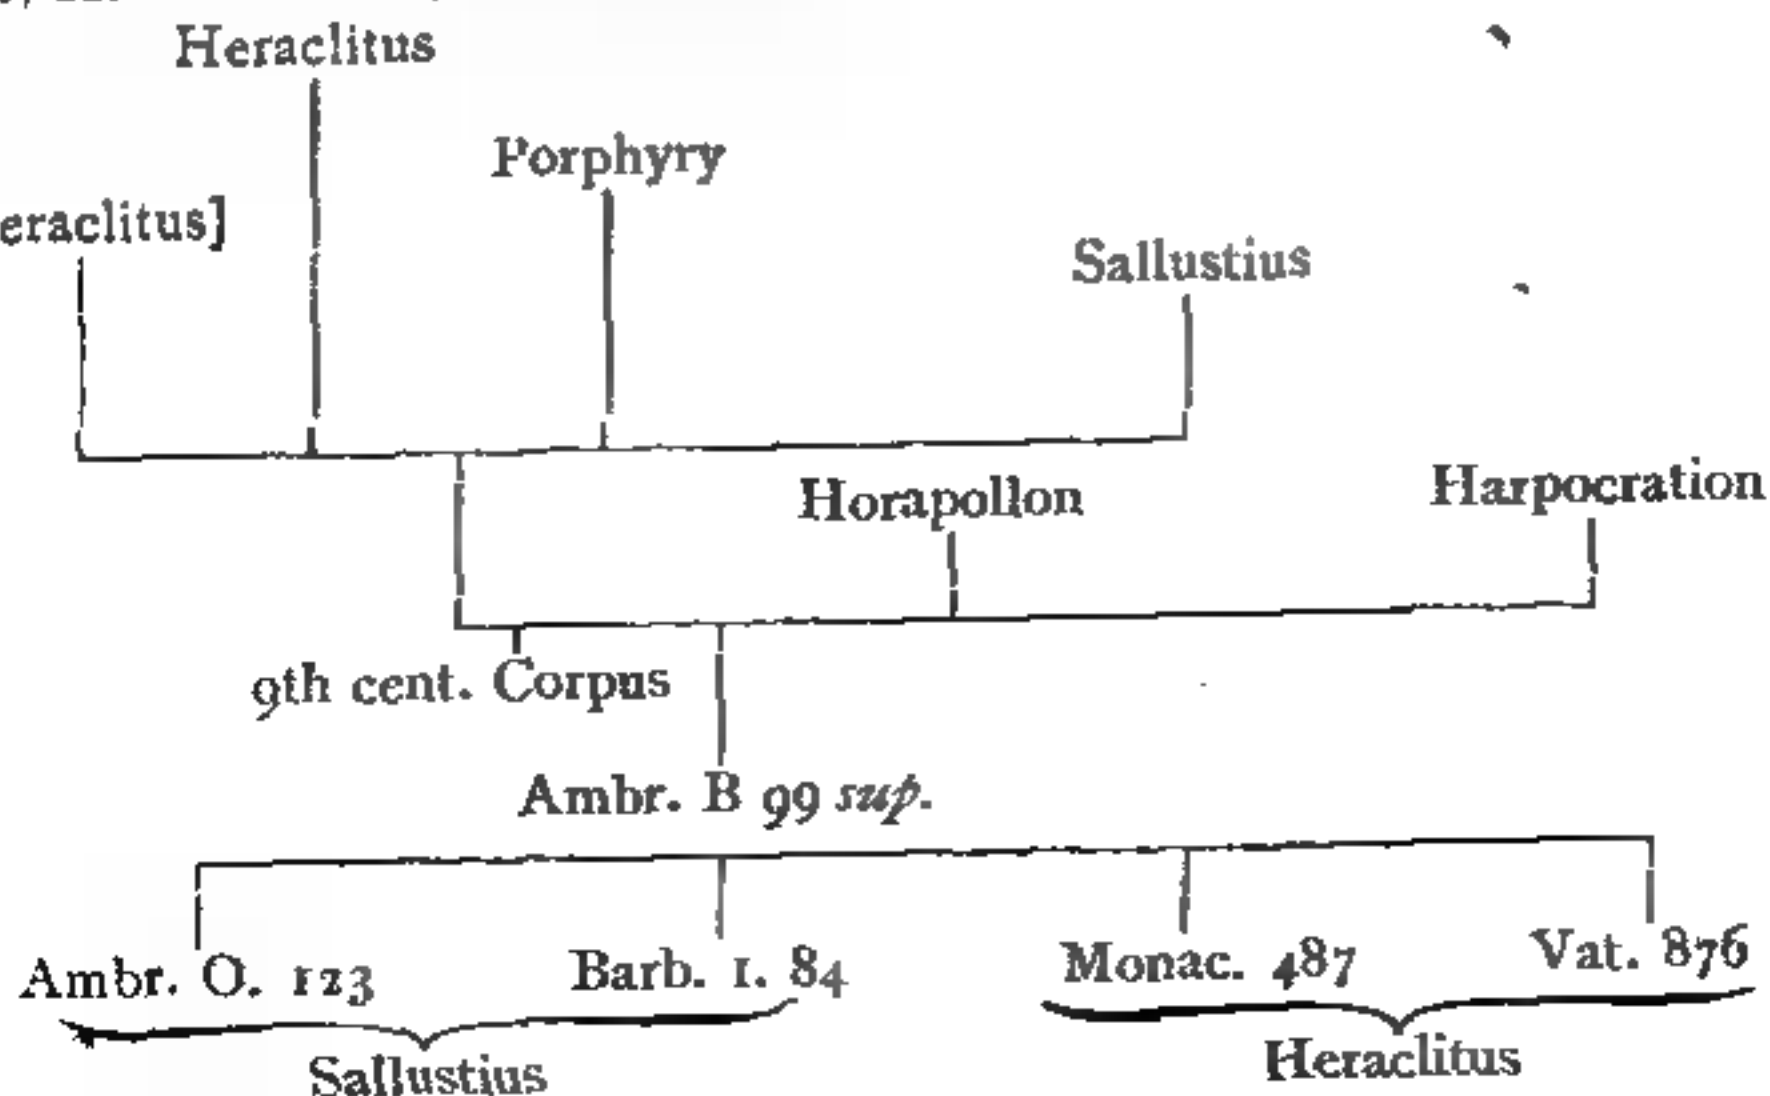

Such ■ corpus would have served practical ends, since the allegorisation of myths was a regular literary occupation in Byzantine times¹⁷. But these speculations are in the air: we cannot trace the history of the text of Sallustius with any confidence, and the stemma indicating its possible descent is therefore relegated to ■ footnote¹⁸.

§ 3. Editions.

Of these it is not necessary to speak at length, since Muccio has given full information in *Studi italiani*, III. 24 ff., VII. 45 f. The *editio princeps*, published by Gabriel Naudaeus as the work of Leo Allatius at Rome in 1638¹⁹, was based on the Barberini MS., making certain easy emendations, giving the work its present title, altering the chapter-division, and modifying the κεφάλαια which precede the text in the MSS. (Muccio, 26): instead of the thirty-two chapters of the Barberini MS. (which follows herein Ambrosianus B 99, while the other copy, O 123, substituted a division in thirty-eight chapters²⁰), Allatius made twenty-one. Thomas Gale, Fellow

¹⁷ Cf. the *Anonymus* quoted in n. 16: he gives practical advice for the art. Examples are afforded by Psellus, Tzetzes, Anon. *De Ulixis erroribus* (Westermann, 329 ff.), Nicephorus Gregorus in the fourteenth century (Matranga, *Anecdota graeca*, II. 520), and Christophorus Contoleon (*ib.* 479 ff.). The same pursuit in the West produced the *Ovidius moralisatus*: cf. also the moralising scholia on Terence, H. T. Karsten, *Album Herwerden*, 129 ff.

of Trinity and Regius Professor of Greek in this University, included Sallustius in his *Opuscula Mythologica, Physica, et Ethica*, published at Cambridge in 1671 and at Amsterdam in a revised form in 1688: the text is based on that of Allatius, but includes some good emendations of his own. In the eighteenth century the text was translated into French by J. H. S. Formey, who reprinted the Greek also (Berlin, 1748), into German by J. G. Schultess (*Bibliothek der griechischen Philosophen*, III., Zürich, 1779), and into English by Thomas Taylor, who published this translation in ■ volume containing also his renderings of the Pythagoric sentences of Demophilus and five hymns of Proclus (London, 1793)²¹. Gale's notes, as also those of the *editio princeps* and some of Formey's, were reproduced by J. C. Orelli in his edition (Zürich, 1821), a work of considerable use by reason of its collection of parallel passages from other Neoplatonists. This in its turn was employed by Mullach for his reprint of the text, *Fragmenta Philosophorum Graecorum*, III., 30–50 (Paris, 1881). All these editions are based on the collation of the Barberini MS. by Allatius. Muccio, by his discovery of Ambrosianus B 99, and by his realisation of its importance (*Studi italiani*, III., 1895, 1 ff.) put the text on a new basis; his projected edition has not appeared, though some conjectures have been put forward by him in *Studi italiani*, VII., 1899, 45 ff.

The bibliography of the treatise in recent years is brief:

some of these have vanished, while for others it is difficult to determine at which word they mean the break to come. The list which follows is therefore defective.

- I Those who would learn about the gods need to have been well educated from childhood and must not be bred up among foolish ideas; they must also be good and intelligent by nature, in order that they may have something in common with the subject. Further, they must be acquainted with universal opinions, by which I mean those in which all men, if rightly questioned, would concur; such opinions are that every god is good and impassive and unchangeable (since whatever changes, changes for better or for worse; if for worse, it becomes bad, if for the better, it proves to have been
- II bad in the first place). Such must be the learner, and his instruction should be as follows. The essences of the gods never came into being, for whatever always exists never comes into being, and all things that have first power and are by nature impassive do exist always; they are not formed of bodies, for even of bodies the powers are bodiless; they are not limited by space, for that certainly is an attribute of bodies; and they are never separated from the First Cause or from one another, any more than are thoughts from the mind, sciences from the soul, or the senses from a living creature.
- III It is worth our while to enquire why the ancients left the statement of these truths and employed myths, and so to obtain this first benefit from the myths, that we enquire and do not keep our intellects in idleness. Consideration of those who have employed myths justifies us in saying that myths are divine; for indeed the inspired among poets, and the best of philosophers, and the founders of solemn rites, and the gods themselves in oracles, have employed myths. Why myths are divine is a question belonging to philosophy. Since all things in existence rejoice in likeness and turn from unlikeness, it follows that our statements about the gods ought to be like the gods, in order that being worthy

(and such favour can by myths alone be won). So the myths represent the gods in respect of that which is speakable and that which is unspeakable, of that which is obscure and that which is manifest, of that which is clear and that which is hidden, and represent the goodness of the gods; just as the gods have given to all alike the benefits to be drawn from objects perceptible to the senses while restricting to the wise the enjoyment of those received from objects perceptible to the intellect, so the myths proclaim to all that the gods exist, telling who they are and of what sort to those able to know it. Again, myths represent the active operations of the gods. The universe itself can be called a myth, since bodies and material objects are apparent in it, while souls and intellects are concealed. Furthermore, to wish to teach all men the truth about the gods causes the foolish to despise, because they cannot learn, and the good to be slothful, whereas to conceal the truth by myths prevents the former from despising philosophy and compels the latter to study it. Why, however, have the ancients told in their myths of adulteries and thefts and binding of fathers and other strange things? Is this also admirable, meant to teach the soul by the seeming strangeness at once to think the words a veil and the truth a mystery?

IV Of myths some are theological, some physical; there are also psychical myths and material myths and myths blended from these elements. Theological myths are those which do not attach themselves to any material objects but regard the actual natures of the gods. Such is the tale that Kronos swallowed his children; since the god is intellectual, and all intellect is directed towards itself, the myth hints at the god's essential nature. Again, it is possible to regard myths in a physical way when one describes the activities of the gods in the universe; so some before now have thought Kronos to be Chronos or Time, and calling the parts of Time children of the whole say that the father swallows his children. The psychical interpretation lies in considering the activities of the soul itself: the thoughts of our souls,

even if they go forth to others, still remain in their creators. The worst explanation, the material, is that which the Egyptians because of their ignorance used most; they regarded and described material things as gods, earth as Isis, moisture as Osiris, heat as Typhon, or water as Kronos, the fruits of the soil as Adonis, wine as Dionysos¹. To say that these things, as also plants and stones and animals, are sacred to the gods, is the part of reasonable men, to call them gods is the part of madmen, unless by a common figure of speech, as we call the sphere of the sun and the ray coming from that sphere the sun. The blended kind of myths can be seen in numerous examples; one is the tale they tell that at the banquet of the gods Strife threw a golden apple and the goddesses, vying with one another for its possession, were sent by Zeus to Paris to be judged; Paris thought Aphrodite beautiful, and gave her the apple. Here the banquet signifies the supramundane powers of the gods, and that is why they are together, the golden apple signifies the universe, which, as it is made of opposites, is rightly said to be thrown by Strife, and as the various gods give various gifts to the universe they are thought to vie with one another for the possession of the apple; further, the soul that lives in accordance with sense-perception (for that is Paris), seeing beauty alone and not the other powers in the universe, says that the apple is Aphrodite's.

Theological myths suit philosophers, physical and psychical myths poets; blended myths suit solemn rites, since every rite seeks to give us union with the universe and with the gods. If I must relate another myth, it is said that the Mother of the gods saw Attis lying by the river Gallos and became enamoured of him, and took and set on his head the starry cap, and kept him thereafter with her, and he, becoming enamoured of a nymph, left the Mother of the gods and consorted with the nymph. Wherefore the Mother

of the gods caused Attis to go mad and to cut off his genitals and leave them with the nymph and to return and dwell with her again. Well, the Mother of the gods is a life-giving goddess, and therefore she is called mother, while Attis is creator of things that come into being and perish, and therefore is he said to have been found by the river Gallos: for Gallos suggests the Galaxias Kyklos or Milky Way, which is the upper boundary of matter liable to change. So, as the first gods perfect the second, the Mother loves Attis and gives him heavenly powers (signified by the cap). Attis, however, loves the nymph, and the nymphs preside over coming into being, since whatever comes into being is in flux. But since it was necessary that the process of coming into being should stop and that what was worse should not sink to the worst, the creator who was making these things cast away generative powers into the world of becoming and was again united with the gods. All this did not happen at any one time but always is so: the mind sees the whole process at once, words tell of part first, part second¹. Since the myth is so intimately related to the universe we imitate the latter in its order (for in what way could we better order ourselves?) and keep a festival therefore. First, as having like Attis fallen from heaven and consorting with the nymph, we are dejected and abstain from bread and all other rich² and coarse food (for both are unsuited to the soul). Then come the cutting of the tree and the fast, though we also were cutting off the further progress of generation; after this we are fed on milk as though being reborn; that is followed by rejoicings and garlands and as it were a new ascent to the gods. This interpretation is supported also by the season at which the ceremonies are performed, for it is about the time of spring and the equinox, when things coming into being cease so to do, and day becomes longer than night, which suits souls rising to life.

Certainly the rape of Kore is said in the myth to have happened near the other equinox, and this signifies the descent of souls. To us who have spoken thus concerning myths may the gods themselves and the spirits of those who wrote the myths be kind.

V Next, the learner should know the First Cause and the classes of the gods subordinated to it and the nature of the universe, the essential characters of mind and soul, Providence too and Fate and Chance, virtue and vice, and should see the good and evil constitutions arising from them, and whence it was that evils came into the universe. Each of these topics requires many long discussions, but there is perhaps no reason why we should not treat them here in a summary way, to prevent readers from being completely ignorant of them.

The First Cause must be one, since the unit is superior to all other numbers, and surpasses all things in power and goodness, for which reason all things must partake of it; because of its power nothing else will bar it, and by reason of its goodness it will not keep itself aloof. Now if the First Cause was soul, everything would be animated by soul, if intelligence, everything would be intellectual, if being, everything would share in being. Some in fact, seeing that all things possess being, have thought that the First Cause was being. This would be correct if things that were in being were in being only and were not good. If, however, things that are are by reason of their goodness and share in the good, then what is first must be higher than being and in fact good. A very clear indication of this is that fine souls for the sake of the good despise being, when they are willing to face danger for country or friends or virtue. After this unspeakable power come the orders of the gods.

VI Of the gods some are mundane, some supramundane. By mundane I mean the gods who make the universe. Of the supramundane some make the essences of the gods, some the intelligence, some the souls¹: they are therefore divided

¹ So rather than as Murray, 'Of the Hypercosmic gods some create Essences.'

into three orders, all of which may be found in treatises on these matters. Of the mundane some cause the universe to exist, others animate it, others harmonise it out of its varied components, others guard it when so harmonised. These are four operations, and each has a beginning, ■ middle, and an end; their superintendents, therefore, must be twelve in number. The creators of the universe are Zeus, Poseidon, and Hephaestos, the animators Demeter, Hera, and Artemis, the harmonisers Apollo, Aphrodite, and Hermes, and the guardians Hestia, Athena, and Ares. Hints of these functions may be seen in their images: Apollo strings ■ lyre, Athena is armed, and Aphrodite is naked because harmony causes beauty,, and beauty in things seen is not concealed. While these gods possess the universe in a primary way, the other gods must be supposed to be contained in them, as for instance Dionysos in Zeus, Asklepios in Apollo, and the Graces in Aphrodite. Further, we can see their spheres, earth as Hestia's, water as Poseidon's, air as Hera's, fire as that of Hephaestos, and six spheres, those higher, belonging to the gods to whom they are usually assigned; for we must regard Apollo and Artemis as Sun and Moon. We must give the sphere of Kronos to Demeter, the ether again to Athena, while the firmament is common to them all. So in this manner have the orders and powers and spheres of the twelve gods been set forth and hymned.

VII The universe itself must be imperishable and uncreated, imperishable because if it perishes God must necessarily make either a better or a worse or the same or disorder: (if He made a worse, then He is bad in that He makes what is worse from what is better; if He made a better, He must have been deficient in power not to have made the better thing in the first place; if the same, that will be a purposeless creation; if disorder, why, that will not bear hearing). That it is uncreated even what I have said suffices to show, because if it does not perish, neither did it come into being, since whatever comes into being perishes, coupled with the fact that,

since the universe exists because of God's goodness, it follows that God is ever good and the universe ever exists, as light accompanies the existence of sun and fire, and shadow that of body.

Of the bodies in the universe some imitate mind and have ■ circular motion, while others imitate soul and have ■ rectilinear motion. Of the latter, fire and air move upwards, earth and water downwards: of the former the sphere of the fixed stars moves from East to West, and the seven planetary spheres move from West to East: among the many reasons for this is the need of preventing the process of creation from being imperfect if the rotation of the spheres is rapid. This difference of motion implies a difference in the nature of the bodies; the heavenly body cannot scorch or chill or perform any other function of the four elements. Since the universe is a sphere (as is shown by the zodiac), and the lowest part of a sphere, being furthest distant from all points on its circumference, is its centre¹, and heavy bodies move downwards and move towards the earth, it follows that the earth is the centre of the universe. All these things are made by the gods, ordered by mind, and set in motion by soul. Concerning the gods I have spoken earlier.

VIII Mind is a power inferior to being and superior to soul, deriving existence from being and perfecting soul (as the sun perfects sight). Of souls some are rational and immortal, others irrational and mortal: the former are derived from the primary gods, the latter from the secondary. We must first investigate the nature of soul. It is that whereby animate differs from inanimate, and the difference lies in motion, perception, imagination, and intelligence. Irrational soul is life with perception and imagination, rational is life controlling perception and imagination and employing reason. Irrational soul is subject to the feelings of the body, it desires and is angered unreasonably. Rational soul despises the body reasonably and fights against the irrational; if it is successful, it produces virtue, if it is worsted, vice.

¹ That is, as Murray renders, "in every sphere 'down' means 'towards the centre.'"

SALLVSTIVS § IX

Immortal it must be, because it knows the gods (and nothing mortal knows what is immortal); and despises human affairs as not affecting itself, and, not being of the nature of body, has an experience which is the opposite of the body's; when the body is beautiful and young, the soul errs, when the body is ageing, the soul is at its prime. Again, every good soul has employed mind, and mind is created by no body; how indeed could things lacking in mind create mind? The soul uses the body as an instrument, but is not within it, just as the engineer is not within the engine, and in fact many engines move without any one touching them. If the soul is often caused by the body to err, we must not be surprised: even so the arts cannot do their work if their instruments are spoiled.

IX The providence of the gods can be seen even from these facts which have been stated¹. Whence comes the order of the universe if there is nothing that sets it in order? Why is it that everything comes into being for a purpose, as, for instance, irrational soul that there may be perception, rational soul that the earth may be adorned? Providence can be seen again from its application to our bodies. The eyes were made transparent that we might see, the nose put over the mouth that we might distinguish evil-smelling food; of the teeth those in front are sharp, to cut the food, those within flat, to grind it. In this way we see that every detail in every part is in accordance with reason. But it is impossible that there should be providence to such an extent in mean details, and not at all in first things. The oracles and healings which happen in the universe also belong to the good providence of the gods. We must consider that the gods bestow all this attention on the universe without any deliberation or toil: just as bodies with a function do what they do merely by existing, as the sun lights and warms merely by existing, in this way and much more so does the providence of the gods benefit its objects without involving toil for itself. Hence the questions of the Epicureans are answered: their contention is that what is divine neither is itself troubled nor troubles others. Such is the incorporeal providence of

¹ The first question which follows looks back to ch. VII., the second to ch. VIII.

SALLVSTIVS § IX

the gods for bodies and souls. Their providence exercised from bodies upon bodies is different from this and is called Heimarmene, because the Heirmos or chain appears more clearly in bodies. It is with reference to this Heimarmene that the art of astrology has been invented. It is reasonable and correct to believe that not only the gods but also the divine heavenly bodies govern human affairs, and in particular our bodily nature. Hence reason discovers that health and disease and good and evil fortune come as deserved from this cause. On the other hand, to suppose that acts of injustice and wantonness come thence is to make us good and the gods bad, unless what is meant thereby is that everything happens for the good of the universe as a whole and of all things in ■ natural condition, but that evil education or weakness of nature changes the blessings of Heimarmene to evil, ■ the sun, good as it is for all, is found to be harmful to those suffering from inflammation of the eyes or from fever. Otherwise, why do the Massagetae eat their fathers and the Jews circumcise themselves and the Persians preserve their nobility by begetting children on their mothers? How, when astrologers call Saturn and Mars maleficent, do they again make them beneficent, ascribing philosophy and kingship, commands in war and finding of treasures to them? If they talk of trines and squares, it is strange that human virtue should remain the same everywhere, but the gods change their natures with their positions. The mentioning in horoscopes of good birth or evil birth of ancestors shows that the stars do not cause all things, but do no more than indicate some. How indeed could events before the moment of birth be produced by the conjunction of heavenly bodies at that moment?

So then, as Providence and Heimarmene exist for tribes

μὲν περὶ ἔθνη καὶ πόλεις, ἔστι δὲ καὶ περὶ ἕκαστον ἄνθρωπον, οὕτω καὶ τύχη, περὶ ἧς καὶ λέγειν ἀκόλουθον. ἡ τοίνυν τὰ διάφορα καὶ τὰ παρ' ἐλπίδα γινόμενα πρὸς ἀγαθὸν τάττουσα δύναμις τῶν θεῶν τύχη νομίζεται, καὶ διὰ τοῦτο μάλιστα κοινῇ τὰς πόλεις τὴν θεὸν προσήκει τιμᾶν. πᾶσα γὰρ πόλις ἐκ 5 διαφόρων πραγμάτων συνίσταται. ἐν σελήνῃ δὲ τὴν δύναμιν ἔχει, ἐπειδὴ ὑπὲρ σελήνην οὐδὲ ἐν ἐκ τύχης ἂν γένοιτο. εἰ δὲ κακοὶ μὲν εὐτυχούσι, ἀγαθοὶ δὲ πένονται, θαυμάζειν οὐ δεῖ· οἱ μὲν γὰρ πάντα, οἱ δὲ οὐδὲν ὑπὲρ πλούτων ποιοῦσι. καὶ τῶν μὲν κακῶν ἡ εὐτυχία οὐκ ἂν ἀφέλοι τὴν κακίαν, τοῖς δὲ 10 ἀγαθοῖς ἡ ἀρετὴ μόνον ἀρκέσει.

and cities and exist also for each individual, in like manner does Fortune, about which I must next speak. The power of the gods that orders for the good diverse and unexpected happenings is considered to be Fortune: and for this reason in particular cities ought to pay corporate worship to this goddess, since every city is composed of diverse components. Fortune's power rests in the moon¹, since above the moon nothing whatsoever could happen because of her. If the bad prosper and the good suffer poverty, we must not be surprised. The former do anything to obtain wealth, the latter nothing: from the bad prosperity cannot take their badness, while the good will be content with virtue alone.

X This discussion of virtue and vice requires again a discussion of the soul. When the irrational soul enters bodies and at once produces spirit and desire, the rational soul, presiding over these, causes the entire soul to consist of three parts, reason, spirit, and desire. The excellence of reason is wisdom, of spirit courage, of desire temperance, of the whole soul justice. Reason must make a right judgment, spirit must, in obedience to reason, despise seeming dangers, and desire must pursue not seeming pleasure but reasonable pleasure. When these conditions are fulfilled life becomes just (justice in money matters is but a small part of virtue). For this reason in the educated all virtues may be seen, while among the uneducated one is brave and unjust, one temperate and imprudent, one prudent and intemperate, and indeed it is not right to call these qualities virtues when shorn of reason and imperfect and occurring in certain unreasoning creatures. Vice must be considered by examining the opposites; the vice of reason is folly, of spirit cowardice, of desire intemperance, and of the whole soul injustice. Virtues are the products of a rightly constituted state and of good upbringing and education, vices of their opposites.

¹ Or 'Fortune's power extends to the moon,' if *ἕως δὲ εἰς σελήνην* or *μέχρι σελήνης* is read. That view is perhaps supported by *ἐπειδὴ*

XI καὶ αἱ πολιτεῖαι δὲ κατὰ τὴν τριμέρειαν γίνονται τῆς ψυχῆς. εἰκάσι γὰρ οἱ μὲν ἄρχοντες τῷ λόγῳ οἱ δὲ στρατιῶται τῷ θυμῷ οἱ δὲ δῆμοι ταῖς ἐπιθυμίαις. καὶ ὅπου μὲν κατὰ λόγον πράττεται πάντα καὶ ὁ πάντων ἄριστος ἄρχει, βασιλεία γίνεται, ὅπου δὲ κατὰ λόγον τε καὶ θυμόν, καὶ 5 πλείους ἐνὸς ἄρχουσιν, ἀριστοκρατίαν εἶναι συμβαίνει, ὅπου δὲ κατὰ ἐπιθυμίαν πολιτεύονται καὶ αἱ τιμαὶ πρὸς τὰ χρήματα γίνονται, τιμοκρατία ἢ τοιαύτη πολιτεία κἀλεῖται. ἐναντία δὲ βασιλείᾳ μὲν τυραννίς, ἢ μὲν γὰρ μετὰ λόγου πάντα, ἢ δὲ οὐδὲν κατὰ λόγον ποιεῖ, ἀριστοκρατία δὲ ὀλιγ- 10 αρχία, ὅτι οὐχ οἱ ἄριστοι ἀλλ' ὀλίγοι κάκιστοι ἄρχουσι, τιμοκρατία δὲ δημοκρατία, ὅτι οὐχ οἱ τὰς οὐσίας ἔχοντες ἀλλ' ὁ δῆμος κύριός ἐστιν ἀπάντων.

XI Constitutions also correspond to the triple division of the soul: the rulers resemble reason, the soldiers spirit, and the commoners desire. Where everything is done in accordance with reason, and the best man of all rules, monarchy results; where everything is done in accordance with reason and spirit, and more than one rule, the product is aristocracy; where men regulate their political life by desire, and honours go by wealth, the constitution is called timocracy. The opposite of monarchy is tyranny, since monarchy acts always in accordance with reason, tyranny never; of aristocracy oligarchy, since not the best but a few and the basest rule; of timocracy democracy, since not men of property but the commons control the state.

XII But how is it, if the gods are good and make everything, that there are evils in the universe? Perhaps we must first say that, since the gods are good and make everything, evil has no objective existence, and comes into being through the absence of good, just as darkness has no absolute existence, and comes into being through the absence of light. If evils exist, they must be in gods or in minds or in souls or in bodies. But in gods they cannot be, since every god is good, and if anyone says that mind is evil, he represents it as the negation of itself, if soul, he will make it worse than the body, since every body in itself is free from evil; if he asserts that evil arises from the soul and the body, it is unreasonable that they should not be evil when separate but should, when combined, create evil. If again spirits are called evil, they, if they owe their existence to the gods, cannot be evil; if they owe it to some other source, it follows that the gods do not make everything, and if they do not make everything, either they wish to do so but cannot, or they can but will not; neither supposition is suitable to a god. From these considerations it can be perceived that there is nothing naturally evil in the universe; evils appear in connection with the activities of men, and not of all men or at all times. Now, if men caused these evils for the evil's sake, Nature itself would be evil; but if the adulterer thinks adultery evil, but pleasure good, or the

murderer murder bad, but money good, or he who harms an enemy harm bad, but vengeance good, and all the soul's sins happen in this way, evil arises because of goodness. In fact, the soul sins because, though desiring good, it errs in respect of what is good through not being of First Being. That it may not err, and that if it errs it may be cured, is the object of many things which the gods have created and we can see; arts and sciences and virtuous deeds, prayers and sacrifices and solemn rites, laws and constitutions, trials and punishments came into being to prevent souls from sinning, and when souls have left the body they are purged
 XIII of their sins by gods and spirits of purification. Of the gods and of the universe and of human affairs this account will suffice for those who neither can be steeped in philosophy nor are incurably diseased in soul. It remains that we should discuss the fact that all these things never came into existence nor are separated from one another, since I have spoken earlier of second things proceeding from first things.

Everything that comes into being is created by technical skill or by natural process or in virtue of a function. Creators by skill or by a natural process must be prior to their creations: creators in virtue of a function bring their products into existence with themselves, since their function, like the sun's light, fire's heat, snow's cold, cannot be separated from them. If then the gods make the universe by skill, they make its character but not its existence, since form is what technical skill always makes. Whence in that case does the universe derive its existence? If the gods create by nature, we know that what creates by nature must give of itself to its creation. So, as the gods are incorporeal, the universe ought to be incorporeal; and if it is maintained that the gods are corporeal, whence comes the power of things incorporeal? If we accepted this view, the destruction of the universe involves also the destruction of its creator, if he created by natural process. If, however, the gods make the universe neither by technical skill nor by nature, the re-

maining view is that they make it by a function. Everything made in virtue of a function comes into being with the possessor of the function, and things so made cannot ever perish, unless their maker is deprived of the functional power. Accordingly, those who suppose that the universe perishes deny the existence of gods, or, if they assert that existence, make the Creator powerless. Therefore, as He makes everything in virtue of a functional power, He makes all things coexistent with Himself. So, as He had the greatest power, it was necessary that He should make not only men and animals, but also gods and angels (?) and spirits, and the wider the gap is between our nature and the first god, the more powers must there be between us and Him, since all things furthest removed have many intermediate points.

XIV. If any man thinks it ■ reasonable and correct view that the gods are not subject to change, and then is unable to see how they take pleasure in the good and turn their faces away from the bad, are angry with sinners and propitiated by service, it must be replied that a god does not take pleasure (for that which does is also subject to pain) or feel anger (for anger also is an emotion), nor is he appeased by gifts (that would put him under the dominion of pleasure), nor is it right that the divine nature should be affected for good or for evil by human affairs. Rather, the gods are always good and do nothing but benefit us, nor do they ever harm us: they are always in the same state. We, when we are good, have union with the gods because we are like them; if we become bad, we are separated from them because we are unlike them. If we live in the exercise of virtue, we cling to them; if we become bad, we make them our enemies, not because they are angry but because our sins do not allow the gods to shed their light upon us and instead subject us to spirits of punishment. If by prayers and sacrifices we obtain release from our sins, we do not serve the gods nor

change them, but by the acts we perform and by our turning to the divine we heal our vice and again enjoy the goodness of the gods. Accordingly, to say that the gods turn their faces away from the bad is like saying that the sun hides himself from those bereft of sight.

XV These considerations settle also the question concerning sacrifices and the other honours which are paid to the gods. The divine nature itself is free from needs; the honours done to it are for our good. The providence of the gods stretches everywhere and needs only fitness for its enjoyment. Now all fitness is produced by imitation and likeness. That is why temples are a copy of heaven, altars of earth, images of life (and that is why they are made in the likeness of living creatures), prayers of the intellectual element, letters of the unspeakable powers on high, plants and stones of matter, and the animals that are sacrificed of the unreasonable life in us. From all these things the gods gain nothing (what is there for a god to gain?), but we gain union with them.

XVI I think it worth while to add a few words about sacrifices. In the first place, since everything we have comes from the gods, and it is just to offer to the givers first fruits of what is given, we offer first fruits of our possessions in the form of votive offerings, of our bodies in the form of hair, of our life in the form of sacrifices. Secondly, prayers divorced from sacrifices are only words, prayers with sacrifices are animated words, the word giving power to the life and the life animation to the word. Furthermore, the happiness of anything lies in its appropriate perfection, and the appropriate perfection of each object is union with its cause. For this reason also we pray that we may have union with the gods. So, since though the highest life is that of the gods, yet man's life also is life of some sort, and this life wishes to have union with that, it needs an intermediary (for objects most widely separated are never united without a middle term), and the intermediary ought to be like the objects being united. Accordingly, the

intermediary between life and life should be life, and for this reason living animals are sacrificed by the blessed among men to-day and were sacrificed by all the men of old, not in a uniform manner, but to every god the fitting victims, with much other reverence. Concerning this subject I have said enough.

XVII That the gods will not destroy the universe has been stated; that its nature is immortal must now be set forth. Whatever is destroyed is destroyed either by itself or by something else. If the universe is destroyed by itself, fire ought to burn itself and water dry itself. If the universe is destroyed by something else, that something must be either corporeal or incorporeal. Incorporeal it cannot be, since things incorporeal, as nature and soul, preserve things corporeal, and nothing is destroyed by what naturally preserves it. If corporeal, it must be one of existents or of non-existents; if the first then bodies moving in circles must destroy bodies moving in straight lines or bodies moving in straight lines must destroy bodies moving in circles. But bodies moving in circles do not possess a destructive nature; otherwise, why do we see nothing perishing thence? Nor can bodies moving in straight lines touch bodies moving in circles; otherwise, why have they hitherto been unable to do so? Nor, again, can bodies moving in straight lines be destroyed by one another, since the destruction of one is the creation of another, and this is not destruction but change.

If the universe is destroyed by other bodies, whence they come or where they now are cannot be said. Further, whatever perishes, perishes either in form or in matter, form being the shape, matter the body. If the form perishes and the matter remains we see other things being produced; if matter perishes, why has it not failed in all these years? If matter perishes, and other matter takes its place, the latter must come either from existents or from non-existents; if from existents, so long as they remain for ever, matter is for ever, and if existents perish, this means the destruction not merely of the universe but of everything; if from non-existents, firstly, it is impossible that anything should come

from non-existents, and secondly, if this should happen and it should be possible for matter to come from non-existents, so long as non-existents are, matter also will be: for surely non-existents do not also perish. But if they say that matter remains without form, firstly, why does this happen to the whole universe and not to parts? Secondly, they deprive bodies of beauty alone, not of being.

Further, whatever perishes either is resolved into its components or disappears into nothingness. If it is resolved into its elements, other things are again produced; if this were not so, why were the components made in the first place? If, however, existents will disappear into nothingness, what prevents this from happening to God too? But if His functional power prevents it, such power does not belong to one able only to preserve himself. It is equally impossible for existents to be produced out of non-existents and for existents to vanish into nothingness.

Then too, the universe, if it perishes, must perish either in accordance with nature or contrary to nature. (If it perishes in accordance with nature, then the making and continuance till now of the universe prove to be unnatural, and yet nothing is made contrary to nature), nor does what is contrary to nature take precedence over nature. If it perishes contrary to nature, there must be another nature changing the nature of the universe, and this we do not see. Further, whatever perishes naturally we too can destroy: but the circular body of the universe no one has ever destroyed or changed, while the elements can be changed, but not destroyed. Moreover, whatever perishes is changed by time and grows old, but the universe remains unchanged by all the lapse of time. Having said so much in answer to those who require stronger proofs, I pray that the universe may itself be propitious to me.

XVIII Again, the fact that unbelief has arisen in certain parts of the earth and will often occur hereafter should not disturb men of sense. Such neglect does not affect the gods, just as we saw that honours do not benefit them: further, the soul, being of a middle nature, cannot always judge aright,

and the entire universe cannot equally enjoy the providence of the gods: some sections can always participate therein, some at times, some in the first degree, some in the second degree, just as the head possesses all the senses, the body as a whole, one only. For this reason, it seems, the founders of festivals established also banned days, on which some temples¹ were idle, some shut, some even stripped of their ornaments: this perfunctory service was done in view of the weakness of human nature. It is, moreover, not unlikely that unbelief is a kind of punishment: it is reasonable that those who have known the gods and despised them should in another life be deprived of this knowledge, and that Justice should cause those who honoured kings of their own as gods to be banished from the true gods.

XIX But if neither for these sins nor for others the punishment follows directly on the offence, we must not be surprised, because not only are there spirits that punish souls but also the soul brings itself to judgment, and because, since souls survive through eternity, they ought not in a short time to bear all their chastisement, and because there must be human virtue; for if punishments followed directly on offences, men would do right from fear and would not have virtue. Souls are punished after leaving the body, some wandering here, others to hot or cold places in the earth, others being tormented by spirits; all these things they endure together with the unreasonable soul, in whose company they sinned: because of this the shadowy form seen about tombs, especially of evil livers, comes into being.

XX If transmigration of a soul happens into a rational creature, the soul becomes precisely that body's soul, if into an unreasoning creature, the soul accompanies it from outside as our guardian spirits accompany us; for a rational soul could never become the soul of an irrational creature. The reality of transmigration can be seen from the existence of

¹ Muccio, *Studi italiani*, VII. 70, makes *ιερά* mean 'ceremonies': this seems less probable.

congenital complaints (else why are some born blind, some born paralysed, some born diseased in soul?) and from the fact that souls which are naturally qualified to act in the body must not, once they have left it, remain inactive throughout time. Indeed, if souls do not return into bodies, they must either be unlimited in number or God must continually be making others. But there is nothing unlimited in the universe, since in what is ordered by limit there cannot be anything unlimited. Nor is it possible that other souls should come into being, for everything in which something new is produced must be imperfect, and the universe, as proceeding from what is perfect, should be perfect.

XXI Souls that have lived in accordance with virtue have as the crown of their happiness that freed from the unreasonable element and purified from all body they are in union with the gods and share with them the government of the whole universe. Yet, even if they attained none of these things, virtue itself and the pleasure and honour of virtue, and the life free from pain and from all other tyrants, would suffice to make happy those who had chosen to live in accordance with virtue and had proved able.

- XIII 24. 19 γίνεσθαι altered to γίνεται. 26. 2 συνιφίσταται.
26. ■ φύσεως διαφέρει ὁ πρῶτος θεός (a reading inferred *ex silentio*).
- XIV 28. ■ δίχα τῶν δρωμένων. Note⁷ before this the placing of a question-mark after μεταβάλλομεν, which we may regard as an attempt to make sense of the sentence.
- XVI 28. 21 περὶ θ. (due to a misunderstanding of πῆ, = παρά, in A).
- XVII 32. 3 μέν for μένειν (μέν'). l. 4 om. ἐν. l. 5 οὐδὲ (δὲ deleted later).
l. 19 ἡ altered into καὶ. l. 24 καὶ over an erasure.
- XVIII 32. 30 τοῦ corrected to τὸ. 34. 10 before εὐλογον add. ἔδει τὴν
δίκην αὐτῶν ποιῆσαι, then deleted.
- XIX 34. 14 om. τοῖς. l. 22 πάντως.
- XX 36. 5 χρόνον before αἰῶνα, then deleted.

I infer from the silence of Cumont's notes that this MS. gives πῶς in p. 24. 26 in place of πᾶν, as the editions have: the reading necessitates the insertion of οὐχ before ἐαυτοῦ, as Schultess proposed. It is no doubt due to ■ misreading of the compendium used in the Ambrosian MS.
